Subject: RE: [PCR1000] Discone Antenna

Do you have a attic that you can get into?
If you can the buy a discone and just sit it up in the attic and run
something like rg-6 or rg-59 down to your pcr1000.Just make sure that the
connections a good.

Hi Dave,

I have a Discone in the loft and works reasonably well. Certainly the higher
you can mount it the better.

I also use some home brew dipoles with other radios for airband and a long
wires for HF.

TalkPCR is my choice of software, have a look at the url below.

http://qsy.to/pcr/talkpcr.html

Hope this helps,

Bill

2142. Re: [PCR1000] Discone Antenna

Yahoo group: PCR1000
Date: 2004-01-18 19:59:44 UTC
From: Boomby
Topic: 2135 Message: 2142

Hi Dave,

your question is THE question.
Indeed, the discone is the very good antenna for the upper frequency (VHF UHF)
but as you told you are interested in the lowest frequency such as sw and so on, you should try a long wire (not easy in a flat !) or an active antenna (achtung the Qrm !) or a loop antenna.
this later one, aslo called magnetic antenna is the antenna to improve you rx with the quality you expect.
You may look for this name with "google your friend" : loop antenna.

it costs a bit more than a classic antenna, but in a tower or a flat we don't have the choice !!!

Good luck.

Boomby.

2143. RE: [PCR1000] Discone Antenna

Yahoo group: PCR1000
Date: 2004-01-18 22:35:29 UTC
From: Glenn Blum
Topic: 2135 Message: 2143

Aw Man tough luck.Ok there are other options depending apon your desire.....
Loop antennas work fine for lowband and some hf.I used to belog to the loop antenna group on yahoo there are alot of good technical people over there.
For vhf and uhf maybe a discone is you choise.....Wait I know you are thinking I live in a apartment????????
and Glenn is saying that a discone is good for me! Yes it just takes a little thinking.
How about this place a discone maybe like in you closet in the back somewhere.Or behind a big armchair and of cource away from anything that will cause intereference.
Better yet if you want to go cheep then dont by a discone.Make your self a vertical diapole for vhf/uhf.
I did this once but use a 1" by 4" maybe as tall as your ceiling and cut and nail three diapoles for different vhf/uhf frequencies and center feed them with rg-6 catv coax.stand the pole up against the wall in a corner and volia! you have a cheep multiband diapole antenna for recieving......I know this sounds kinda out of place but since you are dealing with apartment living kinda narrows down you options....
Heck I have actually used the origional supplied antenna from Icom maounted it onto a 3" by 6" aluminmum plate and screwed into the wall with small screws.I still use this antenna for experimenting and my bc80xlt.
Take a look around and let your mind roam for ideas, there are none that are silly!

Hi Boomby,
I should have mentioned before that I have two Terk
Antennas, one is FM only the other is AM-FM though I was told from a radio
club that is not a good idea to use them with the PCR-1000. My budget is
kind of low do didn't want an expensive antenna right now.

2145. [PCR1000] PCR-1000 Issues

Yahoo group: PCR1000
Date: 2004-01-19 16:27:41 UTC
From: Dave Freeman
Topic: 2145 Message: 2145

I just ordered the PCR-1000...I was if there's any special issues I should know about when installing on Windows XP ? I also plan to use the PCR-1000 in a network on Linux with a dual boot for Windows XP & Linux. Should I wait to install Linux before installing the PCR-1000 ?

Thanks,

Dave

2146. Re: PCR-1000 Issues

Yahoo group: PCR1000
Date: 2004-01-19 23:29:02 UTC
From: Robert Sillett
Topic: 2145 Message: 2146

Just make sure that you don't let XP partition the entire hard drive when installing. And if you want to easily copy files between Linux and XP, format the XP partition FAT32 instead of NTFS. Now you can access NTFS from Linux, it's just easier with FAT32.

Since you're getting a new PCR-1000, you'll get the Bonito software. If you want to play with the Icom factory software, make sure you install version 2.00 and not 1.31. The old version has problems under XP.

Hi Bob,

someone told me Partition Magic does its work
automatically. Do I need to adjust the drives at some point ? My Dell PC
only uses NTFS not FAT32 though I read Partition Magic 8 supports NTFS.
Thanks for the info. on the new software. I read the Bonito software
supports Windows XP...

Dave , Jason here .
I just recently bought the Grove Scanner Beam . Put it up about 45 - 50 foot on a rotor . I run it off the PCR1000 and the things i hear are unreal . In the AM Band , Airports i never got ground control at before, now i have ground loud and clear plus i have a good copy on the aircraft on ground also . FM band is unreal , i can hear police stations over 75- to 100 nm out , clear . The HF Band is about the same , very high gain i monitor USCG HF band and i get aircraft low in altitude on the East coast, from Cleveland Ohio ...It is alittle more work than the discone style antenna , but look into it , it was well worth the 50$...

I wouldn't overlook Grove's Scantenna indoors. I used one in the corner of a room and then used it in a closet and it worked pretty good. It takes up more space than the Omni but it is about the best all around omnidirectional VHF/UHF antenna I have found.

Several recent messages have addressed antennas. As I examine the offerings at http://www.grove-ent.com/scannerantennas.html I find several and note the messages can be confused regarding each antenna. Which were you talking about and which is best for the PCR1000, circumstances etc.:

1. Grove Scanner Beam Antenna II
$64.95
ANT18
2. Scantenna from Antennacraft
$49.95
ANT07
3. Grove Omni-II VHF-UHF Receiving Antenna
$29.95
ANT05
4. ICOM AH-7000 Super Wideband Omni Directional
$149.95
2ANTICAH7000

Dave asked about #3.
Jason spoke about #1 (I think)
Declared Hostile spoke about #2

I myself am not getting much in VHF/UHF using a discone (looks exactly like #4 but much less expensive) ... and would like to improve.

Topic: 2152 Message: 2153

To clearify the antenna deal....
I ...Jason have the Scanner beam from Grove . I have all the others, but not all of them came from Grove, another name brand but still the same antenna . I hear 3 times as much with the beam as i do the rest of the antennas i have here . Now something to remember, the Beam has to have a rotor on it , it has to be atleast 45 degrees from the source for maximum reception . So like me , if you listen to local helicopter traffic in the general area, a discone will suit you better , you don't want to have to swing the beam around and follow someone with it all nite , but don't get me wrong i get very good reception on the back side of the beam ...But most often i listen to local stuff on the discone .Now i also listen to military comms also,they most always are to the NorthWest of my home .So i point it to the NW and i pick up all the stuff on the milair band .see you kinda suffer a bit going to the beam i guess you can say, but you gain alot in one direction . I can hear a local airport
ground control and the Aircraft on the ground with the beam, and this airport is about 40nm away from my location . With the Discone antenna i can hardly hear the ground controller . Now that i have told you my 2 cents on what works best for me , Let me stress that the hieght of the antenna is the most critical , i have played with Preamps and boosters, and yes a good booster does work, but it still brings in alot of noise with it, and a DSP will have to be used to filter out the additional noise, get that thing up there as high as possible ! good luck

2155. RE: [PCR1000] Antenna - Help please

Yahoo group: PCR1000
Date: 2004-01-21 23:09:21 UTC
From: Glenn Blum
Topic: 2152 Message: 2155

I was looking at the scanner beam lately but what I want to do is actually put up three, set them 120 degrees apart and individually run coax to them.This may sound silly but any longer disitance areas that I want to listen to will actually be in those directions.
I was just wondering how wide is the beam width over a certain distance?
Ideas are always on my mind.

Glenn

From: giuliano
Topic: 2156 Message: 2157

I have PCR1000 and RX320d too.
The RX320 is better in the HF range (100KHz 30 MHz) for Dsp selectivity
(200Hz to 8000Hz) and
intermodulation.
In the HF bands I prefer it.
But PCR1000 receives FM and WFM too and the F. range is up 1300 MHz
I use these two receivers with my Hardware controller :
see http://it.geocities.com/pcr1000_control_panel.html
and http://it.geocities.com/rx320_page.html

2158. Re: Ten Tec RX-320 D vs. ICOM PCR 1000

Yahoo group: PCR1000
Date: 2004-01-23 14:52:00 UTC
From: Robert Sillett
Topic: 2156 Message: 2158

I have both radios. It's a hard call, but you can definately do more with the PCR-1000. The major down-side to the PCR-1000 is that it is weaker on shortwave than the RX-320D. But you can largely overcome that with a good antenna, and I've found that a discone antenna works very well with the PCR-1000 over not only VHF and UHF, but shotwave as well.

The RX-320D does DRM out of the box, whereas you need to modify the PCR-1000 if you want do listen to DRM. (Note: you can kind of do DRM with an unmodified PCR-1000, but in my experience it's fairly difficult to get the DRM software to lock-on for significant periods of time.)

The RX-320D has 33 or so filters, whereas the PCR-1000 only has 2.8, 6, 15, 50, and 230. But the UT-106 DSP module does a pretty good job and eliminating noise and such.

The most important feature of the PCR-1000 for me is its band scan feature. I love being able to see a 100 kHz region of the dial.

So in summary:

RX-320D: out-of-the-box DRM, zillions of filters, very good shortwave performace, and don't forget American made!

PCR-1000: poorer on shortwave, cool band scan function, full SW/VHF/UHF spectrum, good (but not great) UT-106 DSP add-on, can be modified for DRM

Cons for both radios: neither has a sync detector. This is a huge flow for both radios. I find a sync detector to be much more useful than 33 filters or a DSP card.

Bob

2160. FYI and Questions

Yahoo group: PCR1000
Date: 2004-01-24 03:24:07 UTC
From: thunder@the-arena.co.uk
Topic: 2152 Message: 2160

FYI: Here are the links to both Plaything and The Radio Category at The-Arena

Questions:

Are MLBs as good as they are cracked up to be?

Is there a preferred type of long wire (single strand enamel coated copper or braided copper etc..) ?

Is there a preferred orientation for the said long wire (direction, azimuth etc..) ?

Anyone tried Plaything ?

Regards

2161. RE: [PCR1000] FYI and Questions

From: Glenn Blum
Topic: 2152 Message: 2161

I have a few questions......
I just downloaded plaything.
I installed the latest version of "plaything" and it crashes.The program looks cool but I get no sound.
I am using windows 98 second edition.
After I try to run the program I try to shut the program down and gives me a fatal error.I click out of that then my computer crashes.
right before the crash I get a black screen full of dots..
I had to reboot.
This happened twice.

Glenn
ps well maybe they were not questions.

i suppose (Windows XP core update) can be interpreted in several ways

i'm also waiting for the windoze 98 version

Jack, the retrocalc guy... was going to do some beta testing and give some feedback

for this it seems he required the beta version to be recoded for XP

so the whole update process has ground to a holt waiting for him..... lol

the last version i saw was for 98 and had delays you could play with to tweak low end systems

graphics looked interesting and they were testing some DirectX stuff that looked trance inducing, given the right type of skunk

suits inquisitive types though

plaything (build 2.0.24 - including database) is now available at
http://www.arenalinks.com/pcr1000.htm

it's a later version with the full install package

known to work with XP and 2000 and should theoreticall work with ME and 98

2164. Re::Ten Tec RX-320 D vs. ICOM PCR 1000

Yahoo group: PCR1000
Date: 2004-01-24 07:25:11 UTC
From: Bill Krause
Topic: 2156 Message: 2164

I am going to wade in on this. I have both the PCR1000 and RX320d too. I just never have been able to get any performance out of my unit. I am really not sure if the unit is defective or what. Before I make a final judgement I am going to put up another outside antenna and do some hard side by side comparisons. So far my experience is that the RX320d does not perform as well for me as the PCR1000 on shortwave and the PCR1000 is a fart more versitile radio. I took the PCR1000 on a vacation to the Oregon Coast anbd it performed great on all the bands from SW to MW to FM to scanner. I was very pleased. If the ten Tec doesn't do a lot better when I get that new antena up I am probably not going to mess with it and sell it cheap. I am on the other handd quite pleased with the PCR1000, definately a keeper. I know this experience is contrary to what many have experienced but it remains my experience.

Subject: RE: [PCR1000] FYI and Questions

plaything (build 2.0.24 - including database) is now available at
http://www.arenalinks.com/pcr1000.htm

it's a later version with the full install package

known to work with XP and 2000 and should theoreticall work with ME and 98

-----Original Message-----
From: thunder@... [mailto:thunder@...]
Sent: 24 January 2004 04:46
To: PCR1000@yahoogroups.com
Subject: RE: [PCR1000] FYI and Questions

i suppose (Windows XP core update) can be interpreted in several ways

i'm also waiting for the windoze 98 version

Jack, the retrocalc guy... was going to do some beta testing and give
some feedback

for this it seems he required the beta version to be recoded for XP

so the whole update process has ground to a holt waiting for him.....
lol

the last version i saw was for 98 and had delays you could play with to
tweak low end systems

graphics looked interesting and they were testing some DirectX stuff
that looked trance inducing, given the right type of skunk

suits inquisitive types though

Subject: RE: [PCR1000] FYI and Questions

I have a few questions......
I just downloaded plaything.
I installed the latest version of "plaything" and it crashes.The
program looks cool but I get no sound.
I am using windows 98 second edition.
After I try to run the program I try to shut the program down and
gives me a fatal error.I click out of that then my computer crashes.
right before the crash I get a black screen full of dots..
I had to reboot.
This happened twice.

Glenn
ps well maybe they were not questions.

Subject: [PCR1000] FYI and Questions

FYI: Here are the links to both Plaything and The Radio Category at
The-Arena

Questions:

Are MLBs as good as they are cracked up to be?

Is there a preferred type of long wire (single strand enamel coated
copper or braided copper etc..) ?

Is there a preferred orientation for the said long wire (direction,
azimuth etc..) ?

Anyone tried Plaything ?

Regards

2168. [PCR1000] Just Got my New PCR-1000

Yahoo group: PCR1000
Date: 2004-01-24 21:12:01 UTC
From: Dave Freeman
Topic: 2168 Message: 2168
Attachments: 2 described; binary payloads are missing from this source WARC

Just got my new toy! It's great though I will need to get a better antenna very soon. So far I tested the TV audio, some VHF and AM-FM stations. The AM stations come in kind of poor even though I'm in the city where the radio stations are located.
Is this normal AM reception for the antenna that they supply ?

My PCR-1000 came with two software CDs, one Bonito named RadioCom 4.5 that seems to be having a conflict with Windows XP but still it works. I been trying to tune the stations there I will need to learn from their website. The other CD that was supplied was the PCR-1000 that works very well. BTW, FM reception is fantastic!

I am having problems getting the Scancat Gold software to work with the PCR-1000. It starts up ok but no signal or sounds is on.
I would appreciate the settings needed for Scancat Gold for the PCR-1000.

Any helpful hints would be most welcome for using my new PCR-1000.

Thanks,

Dave

Congradulations!
Software to me is a matter of opinion or depending what you want to do.
I use Radiocom 4.5 (that was supplied with my pcr1000 back in October) for my hf utility listening.For short wave I use Robert Sillette's Short Wave Log program.www.shortwavelog.com
I utilise the standard Icom supplied software and talkpcr for anything above 30 mhz.
Make sure to back-up your eeprom! This is very inportant.Talkpcr has a eeprom utility built into the program and there is another one called pcrbur it can be found on the web.
Find you a good antenna (I suggest something like Radio Shack discone to start) and sit back and enjoy.

I just read Glen's comments and I totally agree. But until you get the Discone you can have more fun with a long wire instead of that antenna that came with the unit. If you live some where you can hang some wire in the trees great, but if you have too just run some around the house and attach the end to the antenna so you can plug in the bnc connector to the radio. Now start looking at other software on the Internet.

I liked the RadioCon 4.5 so I upgraded to 5.2 It's very cool. But it cost 147.00 Ouch!

I listen to police, fire once in a while, I'm studying to be a HAM so I also listen to Morse code and the ham freq. SSTV is cool if you want to see pictures hams are sending to one another 14,230,000 is a good freq for that and the software like MMSSTV is free on the net. Just plug your radio into your computer. There are even decoder so you don't have to learn Morse Code. I have also download pictures form weather satellites like NOAA at 137.5 Mhz and decoded it with WXsat which is also free

If you ever get bored just look into something else.

Have fun!

Dave,
What antenna do you use to receive the NOAA sats
0n 137 mhz?

<< Dave,

Right now I am using cable TV wire that I cut off the
beginning of the cable connector. The AM reception has improved 50% making
almost all the local stations come in almost crystal clear. Still there's
room for improvements on the other stations that are not as powerful. I am
getting the weather channel without any problems at all.

Dave >>

Dave,
What antenna do you use to receive the NOAA sats
0n 137 mhz?

2175. RE: [PCR1000] Question on using the Radiocom 4.5

Yahoo group: PCR1000
Date: 2004-01-25 04:05:47 UTC
From: Dave Freeman
Topic: 2175 Message: 2175
Attachments: 2 described; binary payloads are missing from this source WARC

I'm having slight problems tuning the Radiocom 4.5.
I can get all the preselect stations they have thereon the saved charts.
However when I try to put in a frequency from AM, FM I either don't get the
change in the frequency or the station simply doesn't tune to the correct
band such as MW AM or FM radio.
Is there a users guide for Radiocome 4.5 I can fine somewhere ?

Thanks,

Dave

i WAS GETTING READY TO REPLY TO YOU FROM YOUR PREVIOUS POST.
WOOPS! Caps lock was on To tired to back space everything out.Sorry.
Bonito has a website.Hold on let me grab the url.
http://www.bonito.net/

Go to the ham radio section and scroll down you will see where you can
download the english help file.
I printed this out , it about 20 pages.Now sometimes you will notice that
the text is kinda messed up in translation,bonito is a German company.Its
helpfull but not the greatest.
I was just using using my radiocom 4.5 listening between 4 to 5 mhz.There is
some rtty traffic that is not encrypted from the French navy.I found that
radiocom 4.5 is excelent for hf fax from the US coast guard.
For my HF antenna I use a 100 ft home made diapole running north to south.

Catch you later, I am going to bed!
Good Night Folks!
Glenn

Just the Discone with a preamp, I still get too much noise depending on the position of the pass, but I started building a QFH with copper pipe. I hope it will make a difference.

MensajeCheckout SWLog he has a great free SWL Log program as well as a control for the PCR1000 in it. Does some nice things, he also has a setup were you can control or share your PCR1000 on the Internet and the sound as well, you have to open a port on your computer as it becomes the server. Just search for SWLog.

2180. ICOM Day @ HRO Burbank

Yahoo group: PCR1000
Date: 2004-01-25 23:04:10 UTC
From: Bryan Herbert
Topic: 2180 Message: 2180

Saturday, January 31st is Icom Day at the Ham Radio Outlet in Burbank, California. This would be a good opportunity for us SoCal PCR1K users to gather and talk to the marketing reps that will be on site about the possiblity of an updated version. I personally would like to see APCO 25 compatibility, DCS decode, multi bank scan, 200K tune step for FM broadcast, FM stereo and expanded receive to 2.5GHz w/ optional tv out support for ATV and satellite users.

If you would like to attend Icom Day and give your $.02 it starts at 10am and goes til 530pm, the address is
2416 West Victory Blvd
Burbank, Ca. 91506
(1 mile west of Interstate 5)

You can download TrunkPCR at:

http://104452.home.icq.com/trunkpcr/TrunkPcr.html

It's still a fairly early beta release, so it does have a few bugs and quirks. Otherwise, it works great for trunk tracking of Motorola trunked systems. I use it almost daily to monitor the Aurora, CO police. I guess if I had to list one dislike, it would be the memory management system. It takes a little getting use to, as compared to the memory management in the Icom or TalkPCR software.

Jay is suppose to have a new version out soon that will include EDACS type systems, some additional whistles and bells, and some bug fixes.

Jerry

Concerning audio on a lan controling Icom PCR 1000. You will need to set up Windows Media Encoder Or Shoutcast to stream your audio on the web. Bob Sillett has an excellent site concerning how to do this. Bob's Software is excellent for doing this I have his software controlling my PCR 1000 so I can control it from anywhere I have internet access.

You read about this and download Bob's software at http://www.shortwavelog.com

I just figured it out and it's amazing!! I live in Springfield and the info on the local trunking frequencies were on this page. From that I was able to put the info into the PCR1K trunker program. I had never played with a trunk tracker before so I was a bit slow on the uptake. But it's working well now!! I'm impressed..

Check the following page for more info and where to find the program for the PCR1K

For some reason now whenever I attempt to send mail from my client I get this error.....

This message was created automatically by mail delivery software (Exim).

A message that you sent could not be delivered to one or more of its recipients. This is a permanent error. The following address(es) failed:

PCR1000@yahoogroups.com
retry time not reached for any host after a long failure period

soooooo im replying from the yahoogroups website.....

I think its an excellent idea, I welcome all to email me their thoughts, ideas, suggestions regarding an updated version of the PCR1000. When emailing me, please type PCR1000 in the subject lines to prevent my spam filters from catching it. Also, it will take me some time to print out all the emails so be sure to send them to me by Thursday.

Some suggestions for improvements or upgrades.

A Remote Control Head so the radio can be used in the mobile or remote mounted in the attic etc.

Change the connector on the PCR1000 to a CAT5 LAN connector or USB.

Just so you know...I have bought LMR-400 on eBay...quite a savings.
You might want to check there for a good deal.
Now if I can just figure out how to soldier PL-259 connectors to it.

From: N4EHX
Topic: 2200 Message: 2200

Recently purchased an older model PCR-1000 (No Gaps)

UHF sensitivity seems low on outside antenna and 1/2" Andrews

Hardline. Is there an alignment procedure?

A quick check with the IFR also indicates low sensitivity.

VHF / HF both great. Thanks..Mac

Anyone have recommendations on antenna preselectors or tuners for long wires? Having problems hearing much on the PCR-1000 (just got it back from Icom service, which says they found no problem with the unit itself). Icom recommends the MFJ-16010 Random Wire Tuner for HF (http://www.mfjenterprises.com/index.php).

Get a long wire BALUN. This reduces the impedance of a normally high
'resistance' to a lower (50 Ohm) level. winradio.com makes one, as does
Palomar Engineering, out in California. ~$50. They also help reduce
static discharge by providing a DC path to ground; these static fields
are what attracts lightning strikes.

2205. RadioCom4.5 Special Edition (Demo ?)

Yahoo group: PCR1000
Date: 2004-01-29 16:23:19 UTC
From: Dave Freeman
Topic: 2205 Message: 2205
Attachments: 1 described; binary payloads are missing from this source WARC

As I mentioned before I recently got my new PCR-1000 which came with
software for PCR-1000 & Radiocom 4.5.

I was trying to see from the manual how to tune and work various frequencies
from the on line manual. Still having some problems...

Then I noticed an ad from my December issue of Monitoring Times on the back
cover. The ad was about the IC-PCR1000.
It has the RadioCom 4.0 software in the picture there.

Anyway when I compared it with my there is a big difference in where
everything is. also on the top of my Radiocom 4.5 it says
"ICOM Special Edition" Could this be the reason I'm not not able to tune
various stations. Did I possibly get a demo CD ?

Thanks,

Dave

Dave,
I utilise the radiocom 4.5 that came with my pcr and it works fine.
How are you tuning?
Up in the left hand corner by the frequency display there is a box that has
a "f" on it.click on that and a drop down is displayed.type in you
frequency.Make sure it in khz.For example Type in 4000 for khz which is the
same as 4 mhz.
Utilising the dial put your curser over the left or right sides of the dial and
use you left mouse button for higher incrememnts.While the curser(arrow)is on
the left hand side will cause you to turn the dial down and on the right side
turn the dial up.Right mouse click will do the same but in smaller
increments.This also depends on you frequency increments what is selected down
on the radio control box.You can also use the slider which is directly below
the the frequency display.I dont use the slider it doesnt meet my needs.
Let me know if you still need help.

<<Hi Glenn,

I found how to tune in AM Radio though instead of
putting in .880 on the RadioCom 4.5 I need to put in 880.000 KHz, is this
correct ? It seems to work though. Again my problem now is trying to tune
in FM radio. What do I need to put in for say 101.1 FM ?

Thanks,

Dave >>

Yes.radiocom using everything in khz.So on the station you want to listen to type in 880.00 for 880 khz.
For fm type 1011000 for 10110 khz or 101.1 mhz.Always move the decimal place two positions when converting from khz to mhz.

YEP.Remember that radiocom is more of a monitoring program and not a scanning program.Infact radiocom is a very powerful tool when it comes to radio monitoring.There is alot of hidden feature that most people take for granted.Especially the use of dsp (digital sound processing).
I recommend that you get use to working certain parts first mainly the radio control then onto easy decoding/reception of digital modes.Fax is really simple.Then cw and onto RTTY.Really RTTY is pretty complex.
You also must understand some fundementals of those modes for it to work out.
Dont get discuraged.Take your time and learn it, then have fun.
If you have any questions or need some help just email me or give me a buzz.

Glenn

Thanks Glenn,
I now can tune AM-FM...I should be
able to tune the same for VHF-UHF & Shortwave too, right ?

Thanks,

Dave

Yes.radiocom using everything in khz.So on the station you want to listen to
type in 880.00 for 880 khz.
For fm type 1011000 for 10110 khz or 101.1 mhz.Always move the decimal place
two positions when converting from khz to mhz.

Subject: RE: [PCR1000] RadioCom4.5 Special Edition (Demo ?)

YEP.Remember that radiocom is more of a monitoring program and not a
scanning program.Infact radiocom is a very powerful tool when it comes to
radio monitoring.There is alot of hidden feature that most people take for
granted.Especially the use of dsp (digital sound processing).
I recommend that you get use to working certain parts first mainly the radio
control then onto easy decoding/reception of digital modes.Fax is really
simple.Then cw and onto RTTY.Really RTTY is pretty complex.
You also must understand some fundementals of those modes for it to work out

Dont get discuraged.Take your time and learn it, then have fun.
If you have any questions or need some help just email me or give me a buzz.

2221. Re: Low UHF Sensitivity

Yahoo group: PCR1000
Date: 2004-01-30 21:36:32 UTC
From: Bob Betts
Topic: 2200 Message: 2221

I have posted a preselector circuit on the (other) ICOM PCR1000 group. It's in the photos section. Beware of using a "tuner" or balun for problems such as you describe. Remember, this is a receiver, not a transmitter ... it is not looking for a perfect 52 ohn match, nor is it looking for a balanced line. Receivers want to see the highest signal level with the least amount of noise or adjacent signal pickup ... entirely different that the requirements for a transmitter. End fed antennas are often (but not always) better than balanced types (dipoles) for that purpose. They are high impedance, will deliver the highest signal level to the receiver, and will not be loaded-down by the PCR 1000's input. In any case, the PCR 1000 is not looking for an impedance match, but rather a strong signal with the best S/N ratio. Therefore, preselection is the only reasonable way of doing this when using a multi-band antenna. This is what the Signal Corps has been doing for decades. The preselector will make the entire antenna system resonate at the frequency of your choice, unlike a tuner which is only an impedance matching device. When the preselector is tuned to resonance it acts as a band-pass filter allowing only your desired portion of the band to pass and offering a high impedance to out-of-band signals. My 160 meter end-fed antenna works great, with a preselector, up to about 50 to 75 Mhz. After that I switch to to a homebrew discone which, with the preselector, is excellent above that...including the 400, 800, and 900 Mhz bands.
If you are concerned about static build-up (we all should be), you should have a 10 Megohm resistor across the antenna input at all times to provide a bleed path. Also, there are several good commercially available static discharge units.
Bob

2227. Com port error

Yahoo group: PCR1000
Date: 2004-01-31 01:45:23 UTC
From: plytri
Topic: 2227 Message: 2227

New guy here. How do I configure com port to accept PCR's signal.
Have Dell(!<><?+%$&...) laptop with XP connected to wi-fi network.It
seems to work automatically for everyone else!
Have folowed instructions in help files but no joy.
regards,
captcat

2228. Software for Linux

Yahoo group: PCR1000

From: rich_uk32
Topic: 2228 Message: 2228

Hi,

I'm looking for PCR1000 software that runs under Linux. Anyone kind enough to point me in the right direction?

Thanks in advance for any help!

Rich.

From: user95623
Topic: 2227 Message: 2230

I haven't had any luck either. I have the exact setup you describe. Are you using a port replicator or some other USB to serial device? Or do you have an older laptop with the "real" serial port? I have only USB ports on my laptop and after trying several devices to convert to COM port, finally gave up. I even tried a couple of programs designed to enhance the functionality of the com ports because XP tends not to play nice.

Finally, I decided to plug into the desktop and viola! Automatic like you say.

I am thinking of buying a used laptop that can run win98 easily and one that has a true serial port on it so that I can hopefully, take the pcr mobile.

If you do have any luck, please let me know.

2231. RE: Com port error

Yahoo group: PCR1000
Date: 2004-01-31 21:55:43 UTC
From: Reed Rinn
Topic: 2227 Message: 2231

I, too, am using a new Dell Inspiron 8500 laptop computer running Windows XP Professional.

However, I do NOT have any problems with any PCR1000 software. Bonito RC 45 works fine, as does ScanCat.

I have noticed that the Icom IC-PCR1000 software does not work well with the serial port. After using the Icom software, the com port appears to be locked up and no other programs can access it until after I reboot the system. If I only use non-Icom programs, they all work fine and none have any problems with the com port.

I think the Icom software is using a serial port driver that is not handling the com port protocol properly.

BTW, I see the same thing on my home-brew desktop computer.

Reed

Reed,

What type of usb to serial interface are you using? If possible, do
you have the make/model #?

I haven't had any trouble with any of the supplied software with the
desktop running 98SE nor with a wide variety of the "after-market"
freeware/shareware programs in terms of COM port lock-up.

I am sure you already tried this, but if not, hit the power button to
off in the icom program before exiting to see if that eliminates the
com port problem.

Thanks again for the encouraging news.

73,

Ryan

I'm not using a USB/Serial converter. I'm using the built-in com
port on the Dell 8500.

I read somewhere (can't remember) that not all PCR1000 software will
work with a USB/Serial converter. It has to specifically support
that type of interface.

I have those links somewhere....

2235. FS: PCR-1000 USA Version with DSP

Yahoo group: PCR1000
Date: 2004-02-01 04:36:49 UTC
From: Michael Melland, W9WIS
Topic: 2235 Message: 2235

I have for sale a PCR-1000 with the optional DSP unit. I have the original box (I think) and all original accessories like power supply (I added a disconnect with Anderson Power Poles so you can run it off a base power supply as well) . The radio plays perfectly and looks new. It is very sensitive.... even on HF. The radio has the optional DSP unit installed. I'll include the original Icom software and the updated Icom software. I got this about 10 months ago and it was one of the last non-Bonito versions HRO had.

Only reason I'm selling is that I have a new Icom R8500.

$350 shipped.

For what it is worth I run the PCR1000 on a bit older Gateway laptop with the illusive serial port and it runs great. For what it's worth Gateway sells recondition laptops on their site and there is always Ebay and the zillions of places selling used computers. I really believe that XP is the best version of Windows and returning to 98, which is a very good version, would still be a step back. Just my opinion.

From: user95623
Topic: 2227 Message: 2239

Thanks Bill and Reed,

Having done much experimentation with different USB/serial converters, I have all but given up on my laptop. Reed, I am aware of the the older threads dealing with the converters and that prompted my initial experimentation, even though my hopes were high. Nonetheless, thank you for mentioning them.

I may and probably will pursue a cheap older laptop. Probably will run only 98SE, simply because I don't wany to buy a more expensive laptop with more power/memory than is necessary for running the pcr in a moblie configuration. Also, some of the older less powerful laptops (not all albeit) are considerably smaller and would be more conducive to mobile use.

Thanks again to both of your for your help and insight.

Ryan

2240. [PCR1000] PCR-1000 Sound on 1 Speaker

Yahoo group: PCR1000
Date: 2004-02-02 21:09:59 UTC
From: Dave Freeman
Topic: 2240 Message: 2240
Attachments: 1 described; binary payloads are missing from this source WARC

I recently noticed my new PCR-1000 has sound only on one of my two speakers
At first I thought maybe one of my speakers wasn't connected correctly. I
checked that both speakers are working correctly in real audio. Should only
one speaker have sound when using the PCR-1000 ?

Thanks,

Dave

2241. Re: [PCR1000] PCR-1000 Sound on 1 Speaker

Its MONO, only the "left" speaker should work.

There is no Stereo output of the scanner..

Only if you are running a stereo to mono adapter.If you have a stereoplug running into the pcr then you will have a problem with missing a channel.on stereo.Remember the pcr1000 is mono out.If you have it adapted correctly the you should have both speakers working.Sounds like you may have a plug half in ,half out.
Check your connections.

Dave,
Just saw this came across.Use a mono to stereo adapter from the radio to
you computer.This will also be nessessary for radiocom or other decoders to
work properly.
Do you know what soundcard you have?

Dave,
Just saw this came across.Use a mono to stereo adapter from the radio to you computer.This will also be nessessary for radiocom or other decoders to work properly.
Do you know what soundcard you have?

2248. Eureka!! Dell Laptop XP w/USB

Yahoo group: PCR1000
Date: 2004-02-03 04:17:25 UTC
From: user95623
Topic: 2248 Message: 2248

I think I may have the solution. At least for my setup. Hopefully for others as well, those having only usb ports and running XP.

I couldn't get any response with the exception of com port errors in using my dell laptop with xp home edition and a targus port replicator to convert usb to serial.

Last night I downloaded v 2.99d of talkpcr. I noticed in the release notes that the author had addressed the issue of usb-serial adapters and had included support for some of the more popular requested models.

Mine wasn't on the list, but I figured what the heck. To my chagrin, not only does TALKPCR work, but every single other program as well!! Bonito, the icom program, etc.

Hope this helps the folks out there wrestling with the issue the same as I did.

Ryan

2249. Re: PCR-1000 Sound on 1 Speaker

Yahoo group: PCR1000

From: johnpq2001uk
Topic: 2240 Message: 2249

Hi All,

The PCR-1000 does have a stereo type socket for the speaker. I also has a tiny internal switch which selects speaker or line out. In the 'speaker' position, the audio is connected to the tip and sleeve only. However, in the Line out position the audio out is conneced to the 'normal' stereo connections, with a built in resistive load to both channels. It's still mono - but both lines in a stereo lead carry the audio output.

I would suggest you select 'Line Out' internally and use a normal stereo lead to your line in socket on the sound card.

The resistive loads provide a reasonable termination for the audio amp in the '1000 and the line signal level is kept to a reasonable level for the sound card - it shouldn't overdrive it - and both sound channels are driven.

The information is in that minimal manual provided by Icom.

73,

John

Hello Rob, from my experience your best bet is ebay.co.uk there have been quite a few for sale here recently, from £170 to the one I bought at £250 with optional dsp unit. In fact a quick check by me shows there are two at the moment, one has only a day to go and is at £150 and the other has 2 days to go and has no bids although it can be bought buy now for £275, which in my opinion is a little expensive for a second hand bog standard version, mind you the starting price is £200 so if your clever you can get it for that.Good luck in your search.

Dave, Northern Ireland.

Yahoo group: PCR1000
Date: 2004-02-07 21:56:56 UTC
From: Fuck Off
Topic: 2240 Message: 2257

Interestingly folks, the PCR1000 only offers monaural output if you are feeding speakers directly, but if you set the internal switch to provide line level output (to feed an amplifier or amplified speakers, both the "left" and "right" circuits on the 3.5mm jack are alive.

2258. Icom PCR-1000 Accessible via Web

Yahoo group: PCR1000
Date: 2004-02-07 22:01:30 UTC
From: Fuck Off
Topic: 2258 Message: 2258

I finally did it.

I made my Icom IC-PCR1000 accessible via the Internet.

But be forewarned, this is not a particularly cheap approach. And if you're a Microsoft hater and are looking for an open source solution, you might as well stop reading right here. Essentially the approach is to use Windows Terminal Services to allow remote control of the Icom software.

The scenario is this:

My Win2K workstation has the PCR1000 2.0 software on it. This is what I use to run the Icom when I'm home. When I'm not at home, I want to be able to control the scanner and hear the audio via the Internet. So I needed to conjure up a software and hardware arrangement to get the best of both worlds without having to fuss with cabling, etc. when I come and go.

I have an old Compaq Proliant (200MHz Pentium Pro, 256MB, haha), on which I loaded Win2K Server, enabled Terminal Services, loaded Citrix Metaframe XP (big $$$), and installed the PCR1000 2.0 software. You could get away without buying and installing Metaframe - I'll explain later. But life is a lot easier that way.

I created a share on another server of mine, on which the software's .MCH (memory channel) files would reside. This is so that there is a central place for all the software's memory settings regardless of where the PCR1000 software is running from. Both instances of the Icom software are set to read my .MCH file from the shared folder via a UNC (i.e. \\servername\share\pcr1000.mch).

If the Citrix machine were my only server, the shared folder could just as well have been there. In that case only the workstation has to use a UNC or network mapped drive and path to reach the .MCH files.

I purchased the following goodies from IgotCables.com:
1 ATN-AS251S (Aten serial auto switch)
2 PCM-1400-03 (DB9F-DB25M serial cable)
1 PCM-1420-06 (DB9M-DB25F serial cable)

You can of course order the cables in lengths to suit your requirements. These cables assume the PCs both have DB9M connectors. The Aten serial auto switch was made for sharing things like serial line printers and modems between two computers. It works perfectly fine on the PCR1000 as long as all the cables are correct.

My workstation and the Citrix server connect to the Aten serial auto switch using the DB9F-DB25M cables. The DB9M-DB25F cable connects the output side of the serial auto switch to the PCR1000. With this arrangement, the two PCs can share access (not simultaneously of course) to the PCR1000.

For the sound I purchased a Samson PL-1602 mixer, $379 new but just $99 on eBay, which has eight sets of stereo inputs. It's sort of overkill just for the scanner but it also solved my problem of having a half-dozen computers under my desk and only one set of speakers! I reconfigured a switch inside the Icom to provide line-level output, grabbed a 3.5mm stereo splitter from Radio Shlock, and fed the output of the PCR1000 to both the mixer and the "Line In" audio input of my web server (yeah, /another/ server, but no reason you can't do all this on one decent PC, 800MHz or better). The Samson's output connects to the "Line In" connector on my workstation's sound card.

On the web server I'm running Windows Media Encoder. My web server is Win2K, but WME is alot more flexible on Windows XP or 2003, allowing you to reduce the audio buffering and delay to about three seconds. I'll just have to suffer for now. I set the encoder to provide an 11kbps stream using the WMA 9 voice codec. This is more than enough bandwidth and sounds fine.

If I were not using Citrix, at this point everything would be accessible but it would not be very easy, convenient or flexible. On whatever PC I wish to use I would have to install and use the Windows Remote Desktop software to connect to the Terminal Server, wait for the remote Windows session to start, start the Icom software, and then manually start Windows Media Player on the PC I'm using and open the URL to my streaming audio service. The Remote Desktop client is only for Windows, and although an ActiveX (browser) client is available so you don't have to install the whole client package, it can't handle unusual Terminal Service ports if you're not using the standard 3899. Honestly you could do nearly as well using PCAnywhere or competing remote control products.

Citrix Metaframe XP offers, among many other things, three nifty things in particular... the Web Interface (and optionally the Secure Gateway), Seamless Published Applications, and if you prefer, a JAVA client. With Citrix I open a web page and log in, and the page presents me with a list of applications I can run remotely. One of them is the PCR1000 2.0 software and the other is a handy link that fires up the client copy of Windows Media Player and points it to my WME audio stream. I click one, then click the other, and that's it.

There's loads of configuration details that are not here - I just wanted to give you all an overview of how it came together for me. The only annoyance at this point is the latency in the audio stream, which varies between 8 and as much as 25 seconds. That means that if you hear something interesting and try to stop scanning, you may have stopped on the wrong channel, twenty seconds too late.

2259. TRONQUITO Software

Yahoo group: PCR1000
Date: 2004-02-08 01:19:29 UTC
From: Jim
Topic: 2259 Message: 2259

Has anyone used this software Tronquito with the PCR1000 Win.XP MPT1327 Trunk System??

If so how do I go about hooking it up, and what will I be able to monitor??

Do I need a special cable ??

What is needed to hook the 1000 to my sound card??

Thanks for any help. At this time I use TalkPCR for normal scanning.

Jim

From: Dave Freeman
Topic: 2262 Message: 2262

Good News!

Anyone can put there PCR-1000 on line with
free Shortwavelog software. This software supports all radio bands.
The download site is http://www.shortwavelog.com

Before you can listen to my receiver your need to download Shortwave
log and install any updates needed to start Shortwave log.

Once you have Shortwave Log installed your need to put my URL address
in the Radio Control receiver of
mms://dave-a3o3v7ykc7:21688/
in the Options on the top of the page of Utilities then Click:
Settings Remote Radio Control. Then in the bottom of the left side
your see "Enter my URL for Audio Stream..."
Erase what's there and put...
mms://dave-a3o3v7ykc7:21688/
Select "Save" and Close Remote Radio Control. Close Radio control if
opened.
Put my Internet URL address in your browser if steam is not started...
mms://24.239.179.198:21688/

Then once you hear my receiver, click open Shortwave Log. Click on
Options, then
Utilities, then Remote Radio control...

Remember I need to have my receiver on to tune my receiver. Need any
help just e-mail me...Free support is also available at
http://www.shortwavelog.com

Thanks,

Dave

2265. SWLog, help please

Yahoo group: PCR1000
Date: 2004-02-10 01:40:15 UTC
From: Cristiano Noro
Topic: 2265 Message: 2265

Hello all!

I am running windows XP in portuguese here.
I do not have SP1 installed, however I do have .NET Framework 1.1 and Jet 4.0 Service Pack 8
installed. Well, whenever I try to execute SWlog a get this message: " event log file is full", (translating from portuguese...)
I wonder If this because I am running windows xp in portuguese...?

Thanks in advance.

Greetings from Brazil!

Chris,
PU3CAN

2266. Re: SWLog, help please

Yahoo group: PCR1000

From: Robert Sillett
Topic: 2265 Message: 2266

Chris,

You need to change a setting or two for your application event log.
The installation of the .NET Framework can "fill up" the event log,
so when SWLog tries to start, it can't write to the event log.

Control Panel / Administrative Tools / Event Viewer - right click
on "Application" and select properties. You can eiter increase the
size of the log, thereby making more room, or change the setting
to "overwrite events as needed".

Bob

For india you would have to check with your own
goverment or you canalways get one from ebay ,no body
is goign toknow you have evn if yuur contry doest
allowe some bands to be monitored in india all you
have to do is get your self or build your self a
stelath antenna .Easy for hf bands all you have to is
find a long wire anything more than 6 meters will make
it .

2275. RadioCom 4.5 question

Yahoo group: PCR1000
Date: 2004-02-12 17:22:07 UTC
From: Greg Salyer
Topic: 2269 Message: 2275

I just received a PCR1000. I've played with it only for short using the ICOM and RadioCom routines supplied with the unit. However, I was amazed to find that RadioCom 4.5 doesn't include a bandscope. I figured ICOM supplied the extra software because they admit people need something better than their standard package - which has a bandscope function (although with some weakness). Now I definitely haven't figured out all the RadioCom controls. Does it really have a bandscope function that I just haven't spotted? Thought maybe someone in this forum could tell me.

Greg

2276. Re: [PCR1000] RadioCom 4.5 question

Yahoo group: PCR1000
Date: 2004-02-12 17:53:52 UTC
From: kd5dga@isot.com
Topic: 2269 Message: 2276

Radiocom has a spectrum scope, its on the top. One of the first problems that everyone runs into is correctly entering a frequency. for 10 mhz type in 10000.example 4.7 mhz =4700. The only part of radiocom 4.5 that I wished was provided was the if shift. Looking over the radiocom 4.5 package you have to realize something.It is not a scanning program.It is more taylored to hf monitoring and reception of FAX,RTTY,CW,and SSTV.However the dsp function on Radiocom is very powerfull. I personally like Radiocom 4.5 and a few others simply hate it.Its documentation is very terrible. I had to sit down and learn Radiocom on my own,but now experienced at using it I found it very enjoyable for the hf side. GlennQuoting Greg Salyer : > > > > >

Hello all,

My name is Ron and I just joined this group. Having just purchased my first PCR1000 this past week I have been learning it's operation. The software supplied from ICOM is simply enough, but the Bonito software is more diffcult.

The antenna supplied with the receiver doesn't do much picking up HF frequencies. can anyone recommend a good HF antenna for a confined area?

Ron

2278. FA: Mint PCR-1000 w/UT-106 and Bonito SW

Yahoo group: PCR1000

From: hardwarelust
Topic: 2278 Message: 2278

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3077669328

Radio is absolutely mint, in the original box, with all accessories ununsed. Not a mark or scratch on the radio. Includes UT-106 DSP unit already installed. Bonito RadioCom 4.0 software also included (which was purchased separately). Box slightly worn, but still in good shape. I am the second owner, and this is my unused backup radio.

Seattle area residents are more than welcome to pick up and save shipping costs. Cash only for local pickups, please!

Auction ends Sunday at 9pm PST.

Email me if you have questions or need more pics.

Thanks for looking!

From: Arnott, Scott
Topic: 2287 Message: 2288

Bob-
Suggest you look at

http://www.micosyen.com/pcr.htm <http://www.micosyen.com/pcr.htm>

They have PCR-1000 software that can be used with almost any older computer
(although, it's not the Icom versions...)

Good Luck-
Scott Arnott

The question is , why shouldn't I be entitled to it, its free if you buy a PCR1000 now from Icom. That's the same model that you or I , or anyone else for that matter bought last year without the free software! It is in affect a free upgrade as this software is regarded as superior to Icom,s own. The problem is, if you bought your PCR1000 before they decided to do a deal with Bonito, you dont get the free upgrade. I mean, admit it, you would like all your software for free too wouldnt you?
Regards,
Dave,

From: Tseug
Topic: 2289 Message: 2293

Hi Dave,

You bought an item from someone privately and not from Icom. Why should Icom then subsidise your purchase? It might be considerred a "free upgrade" but that upgrade was only made to new units and the offer not extended to purchases made before. You could always ask them of course as they might be willing to supply the software.

Strangely enough I don't expect software for free - software takes time and effort to develop and therefore costs money. If it is given "free" with a radio then the price of the radio has been increased to cover the cost (though in the case of the original Icom supplied software I'd say "free" was fairly close to the true value of the software!) . I've no idea how much the Bonito software retailed for. It is an older version they give away "free" with the Icom I think?

Yours is an interesting idea though.....I bought a car recently and soon afterwards the spec was changed to include about £6000 (quoted price and obviously not real value) of "extras". Should I be entitled to the extras? I don't think so (but there'd be nothing lost by asking)

I'd like another PCR1000 and I'll buy secondhand. If I get the Bonito software with it you are welcome to that copy

Subject: Re: [PCR1000] Radiocom software

The question is , why shouldn't I be entitled to it, its free if you buy a PCR1000 now from Icom. That's the same model that you or I , or anyone else for that matter bought last year without the free software! It is in affect a free upgrade as this software is regarded as superior to Icom,s own. The problem is, if you bought your PCR1000 before they decided to do a deal with Bonito, you dont get the free upgrade. I mean, admit it, you would like all your software for free too wouldnt you?
Regards,
Dave,
Lisburn

Hi T,
you seem to have grasped what im trying to say, for that I thank you. As for your car Why should you not be entitled to the extras, like anything bought, your car will have a warranty, so in my opinion you are entitled to the new extras within your warranty, exactly my point about the PCR1000. Why does everyone seem to assume that you are not entitled to these upgrades?

Anyway, I have had enough of this argument, so I will concede in this case. It is obvious the world is still dominated by robots programmed to accept what others say. Hopefully the day will come when the human race will stand up and say no more, no more being ripped off by large corporate companies who dictate what we do and have.

Rules are for fools.

2309. TalkPCR 2.99d

Yahoo group: PCR1000
Date: 2004-02-17 12:50:24 UTC
From: ri_computer_guy
Topic: 2309 Message: 2309

I just started using TalkPCR version 2.99d and noticed while scanning, that this program takes up a huge amount of CPU power compared to ICOM freebie 2.0 program. It uses about 75% of the CPU while scanning. WINXP.

Anyone have the same experience? Can anything be done to scale it down a little?

Thx...

2310. using of PCR1000 software with the icom R3

Yahoo group: PCR1000
Date: 2004-02-17 15:54:37 UTC
From: marcusmueller2001
Topic: 2310 Message: 2310

Hi,

I'm quite new to scanners and I want to purchase one.
What I want to have is a spectrum analyser like software
for the PC, a range that includes 2.45GHz and it should be a handheld
too. Well, no much choice ;-).
With the PCR100 or PCR1000 I think the spectrum function of the
TalkPCR shareware would be the best choice. However, I would like to
purchase the Icom R3, because I can use it as handheld and it works
up to 2.45GHz.
I wonder, are there serial protocols between the ICOM scanners
similar? Can I use PCR1000 software to control the icom R3 (well only
the functions that are available in the R3).
Do you know software that works with the Icom R3 and have
a spectrum analyser function (similar to TalkPCR or more improved)?
If have tested some of the demos available on the web, but no one
had a real spectrum analyser, nor worked with the R3 at all.

Sorry to be off topic here, but it is difficult to find what I want,
and I hope some experts are here and can answer my questions ;-).

Marcus

Ave,

Discones are fine for wideband use but are prone to problems as you describe.
A simple crossed-dipole will almost certainly give you far better results with Sats.

Keith,
Tell us about the antenna. Is it commercially
built or did you make it yourself? I have been
thinking about getting into the ABT stuff for many
years but the antenna always stopped me. I would like
more info on both homemade and commercial antennas.

What meter are you using? when I had CaldBm or ACG on (Meter in a meter) it slows down a bit 13% CPU Utilization on a 1.2Ghz running XP 384 Meg of ram. I had a problem after installing on top of an existing instance of the program. GUI became Dog Slow Uninstalled all cleaned out the registery reinstalled. Runs good now.

Wow....nice find but it doesn't make a difference, checked, unchecked,
it still takes about 75% of the processor when scanning!

Thx anyway.....

Yes, I have. I usually run 'Seti@home' in the background, that keeps my taskmaster icon
full. But TPCR in scan mode is a HOG. I knocks Seti@Home down to 25%. Yes, it grabs
75% of my P4@3.06G.
I just don't use it for scanning.
Have you tried to slow down the baud-rate?
I'd love to discuss this, let's take it to the TalkPCR group...perhaps Mr. Mahy will answer...

Try this also,If you do alot of internet surfing run a free program called ADWARE.Adware will remove spyware and other little programs in the background that nickel and dimes your processor.
I can get fast scan rate out of talkpcr if I shut down everything to include my internet and virus protection in my system tray and just run talkpcr alone.
My system is a p-3-500 mhz system running windows 98 second edition.

This is a GREAT antenna for both the 136 MHz NOAA and the hamsat @145 MHz.

http://www.askrlc.co.uk/
It is a good advantage since it uses RHCP, as do the NOAA 'birds.
(Righthand corkscrew)
That alone will drop the linearly phased beeper interference 6-9 db, nevermind
the 6 db increase of the signal for proper phase matching. That's a 12-15 db improvement
over the interference. SNR signal noise ratio.
Martin S. is probably the DX KING of WX SATs. ArcticPeak: What do you prefer?

A dedicated antenna will help reception of WXSat signals, but will not protect against interference, you will need a preselector for this.
See: http://www.hamtronics.com/lnp.htm

The command set for the PCR-1000 is completely different from Icom radios that are based on the CIV interface, such as the 746, 746Pro, etc.

Unless PC-ALE says it supports the PCR-1000, there isn't anything you can do.

2342. Using custom software with IC-PCR1000 Questions

Yahoo group: PCR1000
Date: 2004-02-25 21:40:52 UTC
From: BlairCSF
Topic: 2342 Message: 2342

Hi,
I have found the commands for the radio listed out, and am going to use them for a project I am working on. My question is when you send a command to the radio, do you interrupt the receiver? Basically we are trying to get it to tune to account for doppler shift, and are wondering if by tuning it, will will lose some of the data it is sending.

Thanks.

2343. Re: Using custom software with IC-PCR1000 Questions

Yahoo group: PCR1000

From: Robert Sillett
Topic: 2342 Message: 2343

The PCR-1000 is a bit different from other radios. You can't just send a simple frequency or mode command and then leave the radio alone. You need to send commands constantly to the PCR-1000, otherwise it times out and turns itself off.

I've gotten around this annoying feature by using an idle loop in my program. Every time my program is idle, I query the radio for the its current S-Meter reading. This keeps up the activity on the serial port and keeps the radio from turning off.

Bob

Yahoo group: PCR1000
Date: 2004-02-26 02:23:51 UTC
From: greeble@softhome.net
Topic: 2342 Message: 2344

That isn't entirely true.. You can leave the radio alone without sending commands as long as you hold a serial port line high, CTS if I remember correctly.
To answer the original question though, the audio isn't muted while the frequency changes, although the tuning might cause a small click or pop sometimes.
Also, none of the command lists available on the web are either complete or totally accurate...

Hope this helps, and good luck ^^

Glenn,
What is PC-Ale?? I have a PCR-1000 and within a week I should
have my R-75.

PC-ALE is a program that is used to recieve ALE (AUTOMATED LINK ESTABLISHMENT) transmission used by varoius government agancies.You will only see who is calling and to who they were calling.!100s of frequencies are used throught the hf spectrum.I mainly monitor 9025khz. A reciever like r75 will take full advantage of PC-ALE which you can program in all the frequencies used by the system and PC_ALE will allow the reciever to scan those frequencies. Bill, Here is the link; http://www.chbrain.dircon.co.uk/pcale.html Another group of really good folks I belong to is the WUN (World Utility News) Which is a group of folks who share information about HF Utility stations and frequencies.They deal with alot of HF digital signals.Some of these folks I have seen their names in the magazine, Monitoring Times. here is that link; http://www.wunclub.com Monitoring times is a good magazine that deals with radio hobby,which I have a subscription to. There are a few others like scanning USA and popular communications. I feel that Monitoring Times covers all the information that I need but I dont limit myself just to that publication.I dont have a subscription to scanning USA or Popular Communications. Lots of good reading out there. If you have any other questions I maybe able to help you out plus that goes for anyone else. Glenn Blum kd5dga Nolanville,Texas. 2349. discriminator output

Yahoo group: PCR1000
Date: 2004-02-28 19:29:07 UTC
From: erik69uk
Topic: 2349 Message: 2349

Hi all,

I am thinking of putting an discriminator output on my pcr1000.
I know it has got a packet out, but it is not the, same or is
it .....
Can I put an output straight onto pin 9 of ic8 (TA31136) or will
this give problems?
All I want to use it for is ACARS and POCSAG.
Any suggestions are welcome.

Regards,

Erik

The packet output is a discriminator output, and it works fine for ACARS.

Hi!
Is there Somebody who knows how to decode AIS with PCR1000?.
This is the new system for tracking ships.
Automatic Identifications system.
This system are using maritime VHF channels.
Can be used to monitor other ships in chart-plotter.

I found that using something like wacars didnt go so well with the
discrminator output on my system.Yours may be different.
Orgionally I wanted to use a external speaker and decode at the same time
but some of my programming I use didnt repond well with the discrminator out
to my soundcard.So I set my pcr's speaker out settings to headphone and ran
it into my line-in on my soundcard.The only addition is I went out and
bought some better pc speakers.Now all my sound is through my pc speakers.
Take care,

Glenn

Charles G4GUO, author of PC-ALE, is currently working on a new project for Amateur Radio Emergency Communications, called Amateur Digital Selective Calling, or Amateur DSC.

Although similar to Marine DSC it will not be compatible, to prevent any interference with that service.

The problem with using PC-ALE on Amateur Bands is the possibility of causing QRM to other users of the spectrum, Amateur DSC would minimise this.

Although not previously advertised, anyone with an interest in Emergency Communications is invited to make constructive suggestions as a member of the new Yahoo Group 'ADSCG'. Progress has been slow!

I'm hoping the interest being shown in PC-ALE will perhaps rub off on this new project.

As an aside to the thread on PC-ALE, Charles is requested to port various commercial or military transceivers to the software, which normally attracts a charge. I'm not sure whether he has plans to port PC-ALE to the PCR-1000.

If I remember correctly, this UT-107 is used to decode weather data that is
sent along with FM broadcast (in Japan), much like RDS is.. Not sure what
good it'd do for anyone living anywhere else.. ^^;

The DSP board does work very well and NO to using other countries.
Except for very early serial numbers, the pcr1000 is pretty well
blocked. Most Cell phones are digital so you would not be able to hear
anything anyway.

Terry,

I use a Tosh satellite 4080 (old), serial to USB and PCR software no problems, although with win998 not XP

Works fine with SCANCATgold, AirNAv ACARS 4 and SKYSWEEPER PRO

Sounds like you are looking for the USB driver for the serial converter!

:-)

2370. UT-106 vs. RadioCom 4.5 DSP, PCR-1000 Help

Yahoo group: PCR1000
Date: 2004-03-09 20:12:22 UTC
From: bburtonpa
Topic: 2370 Message: 2370

Greetings y'all. :-)

I am a soon to be PCR-1000 owner having purchased the unit Brian (W3EME) had for sale. I can't wait to give the unit a try.

I do have a hardware/software question that I would like some advice on. ICOM sells the UT-106 notch filter/noise reduction unit (hardware) while RadioCom claims their software (v4.5) does the exact same thing. And if I upgrade to v5.2, I get even more features to improve my listening experience.

My question to the seasoned pros out there is which one better, the hardware solution (UT-106) or the software solution (v4.5) or BOTH? Also, is it worth upgrading to 5.2?

Many thanks for the advice!

Barry

Hello

I have had a PCR 1000 for a couple of years now and I have to say I an very pleased with it. However, I was wondering if there are better radios out there, I like to listen to Shortwave and at night I get a lot of front end overload which I can mute using the Att button (talk pcr). Would a base station type reciever be better or does the front end overload happen regardless.

For serious shortwave listening you may want to consider the WiNRADiO G303, WiNRADiO G313 and ICOM IC-R75.
They will provide you with a lot better performance.

I run into the same thing on sw broadcast.I found a simple solution for my station and its a variable attenunator for Radio Shack.Yes it is really used for catv and its 75 ohm but works great for me.I would say I only use about 3 to 6 db of attenuation and the overloading goes away.

Concerning Shortwave radios and front end overloading. I have a PCR 1000 and I love it. It cannot be beat for what I use it for. But if you are in a hi RF area and getting a lot of front end overload, the best reciever I have found is the Military Reciever R-390A which was designed by Collins in the 50's. Several manufacturers made this reciever over the years and all parts/modules are interchangeable so parts are still available.

You can still find these recievers in excellent condition and a resonable price at Ham Fests and flea markets occassionally, or you can contact Chuck Rippell or Rick Misch who both have excellent reputations and sell top quality recievers. There are lots of excellent web sights loaded with info on these recievers that are well worth taking the time to look at if you are a serious SWL listener.

My Shortwave Log program will let you control your PCR1000 (and
several other radios) over your home network or the Internet.

You can download Shortwave Log from http://www.shortwavelog.com

A list of radios currently publishing to the Internet can be found
at http://www.shortwavelog.com/ActiveRadios

And if you run IIS, you can also have an HTTP/web interface to your
radio. It only supports a small subset of the radios that are
supported in Shortwave Log, but the PCR1000 is one of those radios.
I don't currently have a radio on-line, but you can get a feel for
the interface via http://www.shortwavelog.com/RemoteControlWeb

Bob

TalkPCR has provision for backing up the PCR1000 eprom, however if you do not have the original PCR file backed up the unit will properly have to go back to Icom.

The PCR restore "Important notes "state.

"If you have more that one PCR 1000 take great care not to load the contents of one radios EEPROM into another radio"

Obviously Icom have tied the file to each radio with a ESN or other identifier and you can scramble the EEPROM if you load the incorrect radios file to your unit.

I do thyink there are generic ones or ones from other users that will at least get you back to the point where you can use the radio. May be in the files section of this or similar lists, I belong to enough list I am not always sure where I saw what.

Are there any mods for the basic noise blanker? Mine seems to have
no effect on normal pulse type noise.
Thanks,
Randy

2395. New versions of Shortwave Log and Pocket SWLog posted

Yahoo group: PCR1000
Date: 2004-03-24 15:15:03 UTC
From: Robert Sillett
Topic: 2395 Message: 2395

New versions of Shortwave Log and Pocket SWLog have been posted to the http://www.shortwavelog.com web site.

Shortwave Log is a logging and a radio control program with support for the Icom PCR-1000. The logging part of the program will search eleven separate databases for matches when adding a log. These databases include HFCC, ILGRadio, FCC AM Engineering, FCC HF Seasonal, NIMA, Prime Time Shortwave, and others. There are forty-two distinct reports, and all reports are capable of being saved in PDF, DOC, or TXT formats. This includes custom reports for the Australian DX News, BXDC, NASWA, and ODXC.

Once a log is entered, a reception report can be generated in English, French, Finnish, German, Hungarian, Italian, Norwegian, Portuguese, Spanish, or Swedish. When a QSL is received, it can be natively scanned and imported into the program and a web page of all QSL cards can be automatically generated. For an example, see http://www.sillett.us.eu.org/radio/qsl_cards/qsl.html

RCS is the radio control server part of the program. It integrates with the logging program to automatically tune the radio whenever a broadcast is selected from the What's Playing Now data grid or world map. RCS supports the PCR-1000 and several other radios.

In addition to supporting locally attached radios, RCS also allows the radio to be remotely accessed and tuned via TCP/IP, be it over your home network or the Internet. A web interface is currently in development and is available upon request for the Icom PCR-1000.

Pocket SWLog is a slimmed-down version of the logging program for the Pocket PC. It supports the ILGRadio database and includes the What's Playing Now data grid. Logs entered into Pocket SWLog can be imported into the full Shortwave Log program.

Both Shortwave Log and Pocket SWLog can be downloaded from http://www.shortwavelog.com.

Thanks!

Bob, N3OEA

2396. PDA Interface

Yahoo group: PCR1000
Date: 2004-03-25 15:49:12 UTC
From: qtipf16twiz
Topic: 2396 Message: 2396

Does anyone know of a Palm PDA interface that you can use with your PCR-1000? I'd like to take the scanner on trips with me, and it would be nice to control it with a PDA vs. a laptop. Thanks!

2397. Digital APCO-25 Module

Yahoo group: PCR1000
Date: 2004-03-25 20:15:24 UTC
From: Dave
Topic: 2397 Message: 2397

I have emailed ICOM several times to ask if they intend to make any APCO-25 digital products for the IC-PCR1000 or any other ICOM product. According to Kevin McClinton, Technical Support Representative, ICOM America, Inc. (2380 116th Ave. NE, Bellevue, WA 98004, Ph. (425) 454-7619, Fax (425) 637-8417, www.icomamerica.com), ICOM has no plans to make any products, but "Just because the tech support department has not been informed of a new product, that doesn't mean it's not being developed. We generally do not know of new products until a few weeks before release."

I hope that a decoder module will be made for the PCR1000, or at least a generic decoder to work on all scanners/receivers by maybe Optoelectronics or some other company.

Has anyone heard anything on this subject?

Dave

2398. Bonito Software

Yahoo group: PCR1000
Date: 2004-03-25 20:20:55 UTC
From: Dave
Topic: 1172 Message: 2398

Bonito software now ships with new IC-PCR1000 units. I asked Icom if currrent-owners could get this software (for free). I was refered to the Bonito website.

Does anyone know where current-owners can get this software without having to buy it.

I don't think a current-owner (one who bought the IC-PCR1000 before the release of the new units that ship with Bonito) should have to purchase the software when someone who buys it today gets the software for free. Does customer-loyalty pay off?

Dave

Hi Dave (and Dave),

You (the one with the experience in this group),
first of all you weren't being abused, though perhaps the arguments against your train of thought were expressed a bit harshly...
And in the second place we don't think it is wrong to get something for free. What is not obvious to us (the ones who you claim abused you) is that you should be entitled to something that is now being given with a certain product and which wasn't when you bought the same product. Apart from the fact, of course, that in this case the Bonito software is not given away for free. Bonito and ICOM have apparently struck a deal, both firms will take a lower benefit per sold copy (but you can be sure that they hope to get more benefit by selling more copies...

When I bought my PCR-1000 a couple of years ago it was twice (or more) as expensive as it is now (just counting the price in dollars, and without counting the added effects of inflation). I was "stupid" enough to buy it at that stage, but I would be even more stupid if I were to claim a refund from the seller (or from ICOM).

If you are a christian, you may find some inspiration in Matthew 20:1-16...

Frank

From: Ubbe
Topic: 2397 Message: 2402

AOR where planning to do a generic standalone box to decode APCO-25
from an audiosource. I don't know what happened to the project as
it was announced a long time ago.

AOR also had a super duper wide range receiver in the works that
looked awesome, it was named JT2000, that they said would be released
in 2002, but there haven't been any news about it in a long time.
They had pictures of the box and the PC screen, which are removed now,
which displayed a waterfall diagram and a superfast spectrum
analyzer screen that had an unbelivable sweep rate.

I don't know whats going on inside the AOR company.

There used to be an Aplication called PCRpilot at this URL
http://www.users.bigpond.com/geoffwicks/PCRPilot.htm

But that seems to no longer exsist.

I did use it about 2 years ago but found it only works on the old 3com Palm Pilot. The new PDA's interfaces have changed and this software will not work on them as the new PDA need a MAX 232 chip to toggel the DTR...(Something like that).

The software was very simple and did not do much ...eg you could not scan or search channels with it. All you could do was input frequencies.

I have looked through my old backups and can't find it...sorry but your better off looking to see if somone has something new out there

Try this out.. not a PDA but you can use it anywhere

http://it.geocities.com/giulianoi0cg/pcr1000_control_panel.html

OK, Dave from Ulster. Of course if you feel abused, then you are entitled to that feeling. I agree with you that insulting is abusive, and if I ever did so (I think my comments did not reach that point), I sincerely apologize for that now.
I did not want to go through the entire discussion again (far from it), just had the intention of telling the other Dave more or less what the arguments (opposed to your view) boiled down to.

No hard feelings, I hope...

Hello Dave, you are obviously new to this group yes?
I asked the very same question some time ago and got nothing but abuse from other members who think its wrong to get something for free. So I wouldn't push this subject if you want a peaceful life.

Regards,
Dave.

Subject: [PCR1000] Bonito Software

Bonito software now ships with new IC-PCR1000 units. I asked Icom if currrent-owners could get this software (for free). I was refered to the Bonito website.

Does anyone know where current-owners can get this software without having to buy it.

I don't think a current-owner (one who bought the IC-PCR1000 before the release of the new units that ship with Bonito) should have to purchase the software when someone who buys it today gets the software for free. Does customer-loyalty pay off?

Dave

OK, Dave from Ulster. Of course if you feel abused, then you are entitled to that feeling. I agree with you that insulting is abusive, and if I ever did so (I think my comments did not reach that point), I sincerely apologize for that now.
I did not want to go through the entire discussion again (far from it), just had the intention of telling the other Dave more or less what the arguments (opposed to your view) boiled down to.

No hard feelings, I hope...

Frank

Frank, I (the Dave with experience within the group) was of the assumption that we had been through all this before, I do not particularly wish to start the whole thing off again!
I think the abuse subject can be decided by the person whom the comments of others were directed, namely me. If I consider it abusive to insult me, then clearly for me, I found the experience abusive, so please do not decide for me.
Just for those who wish to get Radiocom for free, It can be downloaded from Emule.

Hi Dave (and Dave),

You (the one with the experience in this group),
first of all you weren't being abused, though perhaps the arguments against your train of

thought were expressed a bit harshly...
And in the second place we don't think it is wrong to get something for free. What is not obvious to us (the ones who you claim abused you) is that you should be entitled to something that is now being given with a certain product and which wasn't when you bought the same product. Apart from the fact, of course, that in this case the Bonito software is not given away for free. Bonito and ICOM have apparently struck a deal, both firms will take a lower benefit per sold copy (but you can be sure that they hope to get more benefit by selling more copies...

When I bought my PCR-1000 a couple of years ago it was twice (or more) as expensive as it is now (just counting the price in dollars, and without counting the added effects of inflation). I was "stupid" enough to buy it at that stage, but I would be even more stupid if I were to claim a refund from the seller (or from ICOM).

If you are a christian, you may find some inspiration in Matthew 20:1-16...

Frank

2409. Re: Bonito Software

Yahoo group: PCR1000
Date: 2004-03-27 01:28:55 UTC
From: Jerry
Topic: 1172 Message: 2409

As the others have said, those of us who bought the PCR-1000 with the Bonito software ended up paying for the Bonito package. The price for the PCR-1000 jumped by $60-$70 U.S. when Icom added the software package. If Icom were to start giving away Bonito to people with older PCR-1000's, I would expect a refund of money from Icom.

Those of you with older PCR-1000's can go to http://www.aesham.com and purchase the Bonito Software for the Icom PCR-1000 for $68.99. Expense wise, that'll put you about even with those of us who bought the newer package.

I could never get Bonito to install on my computer. And when I wrote to Bonito for help, the reply was more or less "If you can't get the software to work, you're stupid. Good luck".

BTW, Emule, Edonkey are both a kind of warez filesharing thing. They're places where you can steal software. Let me say I've tried both, let your conscience be your guide...

It should be straight foward.When I put my cd into my "d" drive it auto executes then starts loading the program.Make sure to write the program key down on a piece of paper first then also make sure that it is case sensative.I think its all captials.You will see on the left hand side where you can put the regestration key in.Also you have a choice of colors.Blue and green.Mine is blue.
The min requirements for radiocom 4.5 pis a p2-200 system.You have plenty.

Let m e know if you need anymore help.

I would not bother with trying to unblock the cellphone bands.
Today almost every cell phone is digital, so there's really nothing
to listen to except beeps and squeals.

The UT-106 DSP module will work with the PCR-1000. The UT-106 is
the same module that's used in other Icom radios like the R75 and
many amateur models.

I am so sorry I read the website and couldnt find a link to download a demo version.It is on sale for $ 59.00.
The author is on vacation right now untill the 12th of april.If you are running anything greater than windows 98me it may not work.
Probe runs in DOS.I have seen some reviews in magazines about this program and supposed to be the fastest scanning software out there.

Topic: 2425 Message: 2428

Probe and Probe1K run fine on this PC under windows XP. I use
DirectIO to give Probe direct access to the com ports.
I suffer a hit of about 2 to 4 channels /second scanning speed
compared to running in real dos (via a boot CD) on here and also on
my lowly spec laptop which is also running XP (or Dos from boot CD if
I really feel the need to wrestle with a command prompt).

I don't think there is a demo of Probe / Probe1K but would have no
hesitation in recommending them for control of the PCR1000 and
Opto535 that I use them with. They are by far the most powerful
control packages for searching and scanning I've used with either of
the above.

Thank you Glenn,

I wanted to try it out but I suppose it being DOS based maybe there cannot be a time limit or limited functions to ensure one wouldn't keep using the shareware without buying. I've read some good reviews on it so I may buy it in the near future. Thank you for pointing me to the site.

The Radiocom 4.5 is a really good program for fax,rtty and cw.I can tell you
that from my own experiences.When I get home every evening I fire up my pcr
with radiocom and let some hf weather fax come down.Also on 518 khz you will
find some NAVTEX transmissions which also radiocom does ver well.
You can go to computer-int.com or there is also a yahoo group called radiocom
where one of the developers is usually active.If you go to the computer-int.com
web site go to the fax area and I have posted some faxes that I had recieved.

From: Jerry
Topic: 2419 Message: 2439

EDACS support has been promised for almost a year now, I think it's turned into "vaporware". Since the city of Aurora converted to a newer EDACS system, I don't think there's a single police department in the Denver area still using Motorola.

Don't be like me and waste donating money to a lost cause. I ended up buying a Uniden BC245, works just fine for most EDACS systems.

Jerry

2440. I feel dumb asking this.....

Yahoo group: PCR1000
Date: 2004-04-10 14:29:38 UTC
From: dvbrown5
Topic: 2440 Message: 2440

but I've been struggling with this for the past two days. I don't know how to enter AM broadcast and SW frequencies into my PCR1000. I don't know how the frequencies are represented other than UHF/VHF. Is AM 1230 written as 1.230,000 or 0.1230,000 etc? I don't have a good antenna (yet) to know if I hit it or not. I'm new to having a radio with the ability to receive in these ranges. I did a search in goggle for some sort of chart or conversion table and cannot find a thing.

Thank you for any help with this probably unusual request for help in basic math.

ok here is a simple on.and it should work type in 10.000 this is wwv and should have strong enough signal, that the supplied antenna should be able to recieve.
wwv (time broadcasts) are on 5,10 , 15 and 20 mhz.Make sure that the am mode is selected.

About the time I made the decision to buy a PCR I find myself heading to Europe for about three years.. Most of my Yaesu and Kenwood stuff can accept from 110-240V so they're good to go. Before I pop the money down on a PCR- does anyone know if the power supply that comes with the PCR is 110-240 as well?

Also- I'll be living in an apt. and giving up my antennas- what is a good indoor antenna that would give me broadlistening? I have, somewhere, a ratshack longwire SW antenna that winds up that I've used with my Yaesu VX7. Would that be best? Any other suggestions?

I don't know what software you're using, But with TalkPCR
the . is the Megahertz radix, and the , is for KHz. So, you
want 1.240,000 (.)
Good luck.

Thank you,

It now makes sense, the AM broadcast band overlaps into the Mhz range. That's what threw me. I also assumed that SW stations operated in Khz only and I didn't understand the placement in Talkpcr, but I do now. Thank you.

2446. PCR1000 versus TenTec RX320

Yahoo group: PCR1000
Date: 2004-04-11 05:20:31 UTC
From: jimw1705
Topic: 2446 Message: 2446

I've heard comments the TenTec is a better radio for the HR frequencies from broadcast up to 27 mhz. Is this true? How does the PCR1000 do on shortwave and 20 meter sideband?

One of the things interesting about the Bonito version is it decodes SSTV and RTTY I think which would be nice.

Hi All,

Just to let you know that the email to the group supposedly from me which was infected with the Netsky virus was not from me. I have full anti-virus protection and have double-checked by running the Symantec Netsky removal tool. There are no instances of Netsky, or any other virus, on my machine.

Presumably the mail came from someone with my address in their address book.

Regards

Mike

This seems to be common practice now, Mike. I've had complaints from "postmasters" all over the world about messages from me that could not be delivered due to a non-existing address. I don't even dare think about all those messages from "me" that did reach their destination - no doubt with a virus, or at least spam...

Frank

The problem may not be our machines,but at the server levels or from someone elses machine.I see auto replies frequently that a virus was found in a attachment that I sent but never had sent to begin with.To Keep this pratice down is to keep the mass mailed fowards down.When I recieve one of these emails that says foward this to you freinds or to 10 people is asking for some trouble.Some where somebody is gathering information to spread spam and other stuff around but utilising mass fowarded emails.This is also a good way to channel viruses. Just my thoughts, Glenn Quoting "Frank(ee)" : > > > > > This seems to be common practice now, Mike. I've had complaints from

2451. PCR1000+potential buyer witha thirst for knowledge DATA MODES

Yahoo group: PCR1000
Date: 2004-04-18 18:35:36 UTC
From: Private
Topic: 2451 Message: 2451

Just a few questions before I splash out on a PCR1000. Examples of peoples setups software integration, connectivity etc would be really appreciated.

1. I would like to decode satellite APT. I am reasonably happy with the software choices but what is the connectivity and is IF bandwidth an issue?
2. I would like to decode POCSAG pagers (UK) what is the choice software how does it integrate, do I need an interface or discriminator?
3. Automatic Link Establishment (ALE) again recommended connectivity, interfaces etc, does anybody use PC ALE and can they get it to scan ok with the PCR 1000.
4. ACARS HF anybody have any experience with this setup.
5. PACTOR 1…….well I will try asking but not expecting.

P.S. Many thanks in advance, I am sorry if I am asking a lot but cautious not to end up with a piece of junk collecting dust. Please do not forward me to the software pages; I am only interested in the PCR1000 and peoples actual experiences in the above modes.

1. I would like to decode satellite APT. I am reasonably happy with the software choices but what is the connectivity and is IF bandwidth an issue?

It decodes APT nicely with an IF of 50Khz

2. I would like to decode POCSAG pagers (UK) what is the choice software how does it integrate, do I need an interface or discriminator?

Nope, just use the Packet output

3. Automatic Link Establishment (ALE) again recommended connectivity, interfaces etc, does anybody use PC ALE and can they get it to scan ok with the PCR 1000.

<stupid mode> eh? </stupid mode>

4. ACARS HF anybody have any experience with this setup.

I've found that ACARS works best on the headphone ouptut and a little fiddling with the volumes

5. PACTOR 1…….well I will try asking but not expecting.

Not a clue sorry....

ALE or Automatic Link Establishment is an HF mode whereby 2 computers work out for themselves which of a given set of frequency bands are best for the task at hand. They then send their data ontil the band goes dead forcing them to move to another band.

In this way one can get a few hours more transmitting time from the HF bands than would normally be possible.

As for PCR1000 doing this. I'm sure you could use it with PCALE (I think it listens to the data) but I wouldn't. The PCR1000 is famous for being not very good on HF. Deaf is the word that springs most to mind.

For ALE purposes you'll want a receiver that is every bit as sensitive as the 2 involved in the conversation otherwise you'll find them moving off to another frequency and you not going with them.

AS for POCSAG, do they still use that at home? Its been 7 years since I did any radio work at home. I would have thought that SMS over GSM has taken off to the extent that they would be making pager type devices that use SMS. I know over here we can get a Blackberry that works on GSM (I have one) and it is capable of transcieving hundreds of messages an hour using GPRS/GSM. Its killing the pager companies.

2454. Thnx for the info guys.

Yahoo group: PCR1000
Date: 2004-04-21 20:41:51 UTC
From: Private
Topic: 2454 Message: 2454

Cheers for the info, as for pcale I have used that with my 8500 but have had trouble getting the program to control the scanning on my receiver through the CIV RS232, (probably because I am running XP). I thought maybe with a pcr1000 being software controlled it might overcome that problem as it is integrated.

Thanks for the info on POCSAG and the packet/discriminator output (4 or 5 channels up here in the NE broadcasting), further question on that though…….what other data modes use the discriminator/packet output, has anybody tried other modes with it successfully?

Also on the wxsat APT transmission……good news about the 50khz IF ….the 8500 is crap WFM as its 150Khz.

Well reading between the lines good on V/UHF but limited on HF, I take it the front end overloads and not very selective, would like to know more about PACTOR/RTTY or other data modes that the PCR exploits fully.

Regards to the group and once again thanks

No issues with bandwidth. I'm using the audio output as I get better
decodes on almost all modes with the PCR /soundacrd software doing so.

> 2. I would like to decode POCSAG pagers (UK) what
is
> the choice software how does it integrate, do I need an interface or
> discriminator?

PDW seems to be one of the favourite pieces of software for POCSAG
(it will do FLEX well too) - best results here are with an interface
and the packet output.

> 3. Automatic Link Establishment (ALE) again
> recommended connectivity, interfaces etc, does anybody use PC ALE
and
> can they get it to scan ok with the PCR 1000.

No problems with ALE though I tend to use an IC706 for ALE as I want
to transmit not just monitor.

> 4. ACARS HF anybody have any experience with this
> setup.

Soundcard output to Skysweeper works well enough but I usually manage
to sleep without resorting to this.

> 5. PACTOR 1 .well I will try asking but not
> expecting.

Soundcard output to Skysweeper works fine. Soundcard output via Hoka
interface also works fine

2461. TalkPCR users Manual?

Yahoo group: PCR1000
Date: 2004-04-25 20:03:47 UTC
From: ronaldb90275
Topic: 2461 Message: 2461

Is there a users manual for the TalkPCR software? I have searched these archives without finding anything. There is quite a bit of information in the Help function, but it is rather hard to pick it out bit-by-bit.
Regards, Ron

2462. Re: TalkPCR users Manual?

Yahoo group: PCR1000
Date: 2004-04-26 23:11:00 UTC
From: twcoffey1
Topic: 2461 Message: 2462

Ron,
I have never seen one. I think the general feeling that the author had was that it so resembles a standard communications receiver that most users would not need a manual. "Help" is about your only source for information other than experimenting with the controls and features.
Ted

Ron

Get a copy of Help to RTF, a small program that reads the help file and then prepares a "manual" from the file. It works very well indeed and gives you an illustrated, logically set out manual with Contents and Index enabling you to find what you need quickly. Most of the radio stuff in TalkPCR is logical and straightforward if you're used to a comms receiver but there are features which many receivers do not have. Also the recording of programs etc are well covered in the manual that hlp2rtf produces. Make no error, its all in the help file anyway but a printed indexed publication is a lot easier to work with. The added advantage of notes in the margin is also not available with help files.

Graham

Subject: [PCR1000] Re: TalkPCR users Manual?

Ron,
I have never seen one. I think the general feeling that the author had was that it so resembles a standard communications receiver that most users would not need a manual. "Help" is about your only source for information other than experimenting with the controls and features.
Ted

2465. Re: Digital APCO-25 Module

Yahoo group: PCR1000
Date: 2004-05-02 13:46:23 UTC
From: joe_katz
Topic: 2397 Message: 2465

AOR's ARD 25(a mythical beast, advertised yet nowhere to be found as of this posting), is supposed to decode APCO 25 transmissions from a 10.7 MHz IF output, which some radios have. It will not decode directly from audio.

It seems to me (and I've been wrong before) that one ought to be able to extract the PCR1000's 2nd IF for this purpose: it is exactly the 10.7 MHz we need. There are instructions on the DRM Web site for getting at the 3rd IF, 455 kHz, to install a converter board that gives the 12 MHz IF output DRM software needs. In theory obtaining the 10.7 MHz output would be even easier because we would need no converter board.

Anyone have the necessary info on the circuit board? I'm not entirely thrilled about working on surface mount components, but hey it could happen.

Joe K6atz

2466. How Can I Unlock The New TalkPCR ?

Yahoo group: PCR1000
Date: 2004-05-04 04:42:45 UTC
From: dr_scrivener
Topic: 2466 Message: 2466

I just bought a PCR-1000 and need the timer and recording
functionality provided only by TalkPCR, but now I find that there is
no way to license a copy. The splash screen is very annoying and
I'm tempted to try my hand at hacking to remove it, but would prefer
a less drastic solution. Any ideas?

Thank you in advance.

Jeff

No Clive,

2.92 is still a beta version and has never been released as a finished product. It has a couple of bugfixes as compared to 2.4. I am also using 2.92 (without problems), and I don't find any differences with 2.4. People who are using 2.4 and experience problems, may benefit by using 2.92. In other cases, if you are using 2.4 or 2.92 without problems, there is no reason to change.

Frank

2485. iCOM100 vs. iCOM1000

Yahoo group: PCR1000
Date: 2004-05-18 20:35:07 UTC
From: mfs_md
Topic: 2485 Message: 2485

We have used the iCOM100 (which has been discontinued), and when monitoring ACARS channels were getting a lot of undesired adjacent frequency traffic. I notice in the specs for the iCOM1000 it indicates a span range setting (a +/- 25KHz setting would seem to provide a desired filter).

Does anyone know whether the input frequency isolation is significantly better on the 1000 over the 100 ? Or will I run into similar problems.

Thanks, Mark

Our monitoring is done on or in the general vicinity of airports, such that we often receive traffic which is on a frequency that is 50KHz away from the one we are trying to capture. With the more expensive receivers (Park Air, Wulfsburg) we don't have that significant a problem. Though, I want something as part of a cost efficient portable kit. These iCOMs are ideal in size, but isolation at busy airports may be an inherent problem that cannot be overcome at this price point. Mark

There were some postings in the past with people that had some problems with overloading from strong pager equiptment.As for me The closest tower to my location is about 1/2 miles away and I dont have any problems with any of its equiptment interfering with my radio.
There was mention about using a stub filter made from coax cable.It should be approx 11 inches in length.
Check uot the archives

Are you talking about windows? If so, a right click on the tool bar will give you all options for tool bar display, address bar, etc...

Hi, yes I'm using windows, and right clicking does nothing.

The bar I'm talking about shows buttons above the window:

Power - rack - tuning/mode - meter/scope - radio - commrx - table - dtmf ------comport - off -------

Hi again, no prob, I'm sure somebody has an answer. I had looked through 'help' which said, if I understood correctly, that it could be switched of in options, but that only controls which com port.

Looks from the pics like you can just unplug it and
you are back to your regular old pcr1000 box. I guess
my PCR100 would work in it??? What I would like to see
would be the same thing in a bottom ventilated black
steel box that you could vehicle mount, I've used my
100 in the car with my laptop and it's a lot of
trouble.

2517. Re: [PCR1000] Transform your ICOM PCR1000 PC in a true desktop receiver

Yahoo group: PCR1000
Date: 2004-06-11 05:39:17 UTC
From: Declared Hostile
Topic: 2512 Message: 2517

If you look around on he site he has a black metal or plastic box too. I would prefer the black metal box just for the sake of looks. My shack doesn't have any wood in it and a fine wood cabinet while attractive would look really out of place.

Anybody sent him an email to see what these things cost? Looks really interesting and if reasonable I'd probably buy one.

Cool project indeed.

2519. Re: Digest Number 676

Yahoo group: PCR1000
Date: 2004-06-14 17:35:29 UTC
From: Robert Sillett
Topic: 2518 Message: 2519

In order to listen to Dave's radio, you need to use the "fat" client
that is included in Shortwave Log (http://www.shortwavelog.com).
Dave's radio doesn't respond to HTTP requests.

There is a web interface for host systems with Microsoft IIS, but
that's only available with 2000/XP Pro. Dave is running XP Home, so
you need to use the client that is built into the Shortwave Log
program to tune his radio.

At present, 2 of the 4 radios listed at http://www.shortwavelog.com
are available via HTTP. All can be accessed with the "fat" client.

Bob

2520. WoodBoxRadio

Yahoo group: PCR1000
Date: 2004-06-15 15:43:39 UTC
From: igougowego2000
Topic: 2520 Message: 2520

Last week I checked on the cost of the "WoodBoxRadio"
_____-

WoodBoxRadio
I0CG IK3VIG I3VOM

WoodBoxRadio is a "virtual trademark" it only identify our team.
We are amateurs radio homebrewer, we are not a real Company.
Business is not our job, it is only hobby, we make our projects for
friends and for us.
We have not a real production line with items in stock, we assemble
it to request.
The value of our projects is not "only components", they are full
handcraft step by step
with high quality and nice design, at the best of our possibilities.

The price list in EURO: US$ = EURO x 1.22
_____

The 2 PCB (main + keyboards) 5,00
Programmed PIC 18F252 30,00
Control Panel assembled and tested (mec. encoder included) 105,00
Optional optical encoder (extra for complete box also) 16,00
Plexiglass Front panel, with art and
preforated 8 keys area 15,00
Wooden cabinet with
feets 110,00
MDF black leather paint, with
feets 100,00

Complete project assembled in wood polished box 290,00
Complete project assembled in MDF black painted box 270,00

Shipping cost to USA/Canada/Japan:

Airmail cost for PCB/PIC 5,00
Airmail cost for Contr. Panel assembled 27,00
Airmail cost for Wood Box complete project 49,00
_____

Term & conditions:

All our projects are made from "amateurs" for "amateurs", the
availability is 3 weeks after order.
We offer our projects assembled or parts kit with our support for
service if needed.
We can't offer warranty like professionals makers, we are serius

amateurs.
All the assebly is controlled and tested singularly for you, before
the ship.
Our software is in costant development, we advise you when new
release avalaible.
We ship worlwide at the airmail (7 days) shipping cost, all items are
well packed.

We accept the following metod of payments:

- Paypal to gcampana@... (adding 4% to the total please)
- Bank transfer to: IT 53 O 03268 22300 052XX9873740
- Postal money order to this address:

2526. Recording from a PCR100/1000

Yahoo group: PCR1000
Date: 2004-06-28 20:26:52 UTC
From: ninj43
Topic: 2526 Message: 2526

Hi,

Wondering if its possible to record from a PCR?

Can you use anything like sound recorder in windows?

Is it possbile to only record transmissions and not everything ie only when the squelch is opened?

Thanks for any advice

Ninj

2527. Re: [PCR1000] Recording from a PCR100/1000

I've been using TalkPCR's built in recorder with great
success, heck you can even select a specific
frequency, squelch and date or time to record.

No problem at all as long as your PCR1000 is connected to your PC - and you have some recording software. I use Goldwave as it has a very nice record-only-on-signal facility and so audio files are kept to a reasonable size and its fairly easy to listen to all that was captured.

If you are interested in decoding RTTY, CW PSK31, FAX,
WeatherFax,SSTV, and more, then RadioCom is an excellent choice.
Have a look at http://www.computer-int.com/bonito_products.htm for
details.
Also, there is a Yahoo group "RadioCom"

Support by COMPUTER INTERNATINAL in Michigan.

2541. Communications error when trying to backup EPROM?

Yahoo group: PCR1000
Date: 2004-07-11 07:26:37 UTC
From: ajcorda
Topic: 2541 Message: 2541

I just picked up a used PCR-1000. It seems to
work fine, as far as I can tell (I'm using TalkPCR V2.99d).
Unfortunately, every time I try to back up the EPROM with
TalkPCR, I get a communications error, and the program
exits. I'm pretty certain this is not a TalkPCR problem,
sinc the same thing happens when I try to use the
BRU software package.

Does anyone have any idea what I'm doing wrong?

BTW, This is on Windows XP w/current updates, on an
Athlon 2600 CPU with plenty of memory. I've
tried changing the serial port handshake protocol to both
RTS/CTS and Hardware, and played around with the UART
buffer sizes, but nothing seems to help. I'd REALLY like
to get this critter backed up before I start experimenting....

-Thanks!-

2542. Priority channel question

Yahoo group: PCR1000
Date: 2004-07-11 07:57:29 UTC
From: Dan
Topic: 2542 Message: 2542

I want to know if I can set a prority channel feature on my PCR 1000.
Does this feature exist?
I want to be able to scan a bank but also have my main frequency set
as the priority so I dont miss anything. I have multiple scanners so
I can still monitor my main freq but want to know if I can just use
my PCR 1000. Is there any software that works for this?
Thanks,
Dan

Hi People

I am new to the group, just bought me a pcr1000, and i was wondering if the serial port cable has built in interface or is it straight wired ?, i use the pcr on both my main pc and my laptop, and don't want to keep unplugging that lead. Thanks in advance for any input

2548. Runtime Error '6' - Overflow

Yahoo group: PCR1000
Date: 2004-07-14 20:14:34 UTC
From: Bryan Herbert
Topic: 2548 Message: 2548

While programming the receiver with the Icom program the data sheet and radio disappeared from the screen. I then closed the program and attempted to start it back up hoping all would be fine but now I get a "runtime error 6 - overflow" notice. What does this mean and how do I fix it?

Hi Paul

I've found JVCOMM32 good at decoding HF Fax transmissions.

If you want to decode the 137.5MHz transmissions direct from the polar orbitting weather satellites, then I'm afraid the PCR1000 is not particularly suitable (the IF bandwidth required is about 40KHz and this is not available on the PCR1000). For info on this aspect of the hobby have a look at www.geo-web.org.uk or David Taylor's site at www.satsignal.net

Regards

Clive

Hi...

In my opinion, the PCR1000 isn't that bad, maybe there isn't an IF bandwidth
of 40Khz available, but then you could choose 50Khz, it is pretty close...

Also you may want to check www.wxtoimg.com, it's a very decent piece of
software for decoding WX-SAT, and has the ability to control some of the
radios/scanners in the market (including PCR100 an 1000).

I totally agree with Michael.

With a 137 MHz antenna, the PCR-1000 (at 50 kHz BW), and WXtoImg software
you can completely automate the capture and processing of very good quality
APT images.

If you already have the PCR-1000, you can get started with a simple
turnstile antenna and WXtoImg for about USD $100.

I use a Woodhouse APT-2CP from
http://www.view2earth.com/catalogue/hpod.html.

It's currently USD $135 + shipping

Depending on your location, you may find that you need to add a preamp for
better quality images.

Thanks Tom and Skip for the excellent antenna sites. The sites that you gentelman have provided I am sure have exactly what I am looking for. I plan to get something up and running by the end of September. I have wanted to be able to recieve weather satelite pics for probably more than 20 years. With the internet now it is easy enough to get them without all this BUT it is not quite the same is it. I have got the time and the money now and I think I am finally going to do this. I already have about a half dozen antennas up, one more will hardly be noticeable. I converted my youngest daughter's old upstairs windowless bedroom into a combination computer/radio room with five computers and a dozen radios. Sometimes I turn out the lights and tune a radio just using the light from the dial lights and computer screens. Must be weird looking but it can be very relaxing. My son refers to it as CIA Headquarters.

AM and FM are two different animals (bands, actually). I live less than 2 miles from WBZ's 50KW
antenna..(1030 KHz). Filtering depends more on what you're listening to. Your AM station isn't likely
to bother your satellite photos, and your local pager transmitter isn't going to harm your shortwave
listening. ALL filters cut the signal you are listening to. They just cut the stuff outside to the passband
better. Also, a good ground helps. An outside groundrod is a good ground for the end of you coax cable.
That way the shield doesn't act as an antenna.
Next, what 'band' do you plan to spend your time with?

There is something to be said for the "empty ness syndrome" My middle daughter recently graduated from college and took a teaching job not too far away and sugested she might like to live at home. I had a short answer for that idea. I love our four children very much and feel fortunated that they all live within 30 miles of us but I really like having the big old house to ourselves. It affords me the room to do somethings. Now I am thinking about retiring and that would give me the time to do some things. Money, well the wife has a great job and is willing to keep at it for a while.

Topic: 2554 Message: 2565

Well Tom and gang if you ever find yourself in or near Northwestern Washington State you are certainly welcome to drop in. We still have two vacant bedrooms that I haven't yet converted to another use. Right now I am half way through spending six weeks in Cheyenne, WY helping my wife take care of a younger brother with Cancer. Left the PCR1000 home but did bring Zenith Transoceanic and Radio Shack scanner for radios and laptop & PDA for computers. I should have brought the PCR1000 because it really does it all.

2566. [PCR1000] Antenna to go with PCR1000

Yahoo group: PCR1000
Date: 2004-07-20 14:57:06 UTC
From: sm l
Topic: 2566 Message: 2566

Just got a PCR1000, but it does not come with the
antenna. So while we are at satellite antenna for
PCR1000, I have to ask you guys about what "all-bands"
should I get? (been lurking for too long for this)

Thanks.

Ling SM

I use a Discone (in my loft) as I tend to spend moet
of my time listeneing to military airband. It cost me
about ?50 from Maplins, here in the UK

The APT-2CP looks like a fine antenna but it seems a bit pricey for me. I have found the plans and instructions for a couple of homemade turnstyles and crossed dipoles but they were both missing some of the information. Does anyone know where I can find some plans? Coathangers and PFC pipe can be very cheap and there is no reason why a quality antenna can't be homemade.

2569. RE: [PCR1000] RE:Band stop filter AM/FM overload

Yahoo group: PCR1000
Date: 2004-07-22 01:47:06 UTC
From: Glenn.Blum
Topic: 2554 Message: 2569

I agree with Skip, Its always good to ensure that your antennas are set up right especially the grounding. I am definitely not a electrical engineer but I found through reading, asking questions and experimenting some that I had faulty grounding through my coaxes a few years ago and corrected the situation which gave me lower noise levels plus better signal. I became really good at installing coax connectors, which can be a problem. A few months ago I purchased a MFJ-969 tuner for the hf side and was able to tune away from a lot of unwanted garbage without harming my signals. I found this extremely effective when receiving HFDL signals on hf.

Glenn
Kd5dga

AM and FM are two different animals (bands, actually). I live less than 2 miles from WBZ's 50KW
Antenna..(1030 KHz). Filtering depends more on what you're listening to. Your AM station isn't likely
to bother your satellite photos, and your local pager transmitter isn't going to harm your shortwave
Listening. ALL filters cut the signal you are listening to. They just cut the stuff outside to the pass band
Better. Also, a good ground helps. An outside ground rod is a good ground for the end of you coax cable.
 That way the shield doesn't act as an antenna.
   Next, what 'band' do you plan to spend your time with?

2573. New version of Shortwave Log available for download

Yahoo group: PCR1000
Date: 2004-07-23 00:41:29 UTC
From: Robert Sillett
Topic: 2573 Message: 2573

A new version of Shortwave Log (SWLog) is available for download from http://www.shortwavelog.com.

The logging part of the program will search eleven separate databases for matches when adding a log. These databases include HFCC, ILGRadio, FCC AM Engineering, FCC HF Seasonal, NIMA, Prime Time Shortwave, and others. There are forty-two distinct reports, and all reports are capable of being saved in PDF, DOC, or TXT formats. This includes custom reports for the Australian DX News, BXDC, NASWA, and ODXC.

Once a log is entered, a reception report can be generated in English, French, Finnish, German, Hungarian, Italian, Norwegian, Portuguese, Spanish, or Swedish. When a QSL is received, it can be natively scanned and imported into the program and a web page of all QSL cards can be automatically generated. For an example, see http://www.sillett.us.eu.org/radio/qsl_cards/qsl.html

SWLog has been translated into Italian, Spanish, and Norwegian. A partial translation into Russian is also available.

RCS is the radio control server part of the program. It integrates with the logging program to automatically tune the radio whenever a broadcast is selected from the What's Playing Now data grid or world map. RCS directly supports the PCR-1000. Although I still haven't gotten around to adding bandscan support (sorry...one always needs something on the To-Do list!).

In addition to supporting locally attached radios, RCS also allows the radio to be remotely accessed and tuned via TCP/IP, be it over your home network or the Internet. A web interface for Microsoft IIS is also available for download.

Although not a new release, Pocket SWLog is a slimmed-down version of the logging program for the Pocket PC. It supports the ILGRadio database and includes the What's Playing Now data grid. Logs entered into Pocket SWLog can be imported into the full Shortwave Log program.

Both Shortwave Log and Pocket SWLog can be downloaded from http://www.shortwavelog.com.

Thanks!

Bob, N3OEA

From: Robbins, Matty
Topic: 2575 Message: 2575

Hi All
I have a question regarding sound cards. Since I have on my computer only one sound card that has two inputs (mic and line in) I want to see if it is possible to add another sound cards so I will not have to plug and unplug cables when I change applications (I use the computer as a PVR as well and the capture card is connected to the sound card as well). Does anybody have experience working with two sound cards? And if so is there any special settings that are needed??
Thanks
Matty

2578. TalkPCR SA and audio dropout

Yahoo group: PCR1000
Date: 2004-07-26 11:58:44 UTC
From: Allan Copland
Topic: 2578 Message: 2578

Hi,

I'm new to this group although I've owned a PCR-1000 for a few years.
Its a great little radio and has given me a lot of fun.

I have a question for anyone who uses this radio with the TALKPCR
program in Spectrum Analyser mode. When I call up the spectrum
analyser, the audio 'drops out' after 4 or 5 seconds and the program
does not continue. Just wondering if anyone here has had a similar
experience and if they know of a fix for it. Its entirely possible
of course that I'm doing something dumb but I cant work it out.
The radio works 100% with the Icom Supplied software.

Kind Regards,
Al.

If I'm not mistaken, you will not have audio with the spectrum analyser on as a matter of design...when you say the program does not continue, do you mean it locks up?

2580. RE: [PCR1000] TalkPCR SA and audio dropout

Yahoo group: PCR1000
Date: 2004-07-26 13:23:58 UTC
From: Allan Copland
Topic: 2578 Message: 2580

Hi,

No, what I meant is that the audio quits and the analyser doesn't scan. It doesn't seem to be locked up, just doesn't work.
I'm running WIN2K and SP4 on an Athlon2000 with 256Mb of RAM.
The task manager still reports the program as running.

The radio works perfectly on the supplied Icom software so I dont think it has to do with the actual radio.

I've tried various versions of TalkPcr including the latest one and they all behave the same way.

Could it be to do with serial port settings I wonder?

Kind Regards,
Al.

2581. working with two sound cards

Yahoo group: PCR1000
Date: 2004-07-26 13:30:15 UTC
From: Robbins, Matty
Topic: 2575 Message: 2581

Hi All

Does anybody have any experience working with two sound cards on the same PC?

Matty

One other thing I would check is the proportion of the
graph, I remember running mine before and thinking it
wasn't doing anything but the noise floor was below
the low end of my scale therefore I couldn't see any
scan being traced. Just a thought.

2584. Re: working with two sound cards

Yahoo group: PCR1000
Date: 2004-07-26 16:53:39 UTC
From: clockwatch2000
Topic: 2575 Message: 2584

Hi Matty
Use mine with two sound cards, ie One Audigy2 and the on board sound
with my motherboard. So two separate sound cards should work.

Hi Matty
I am at present working with two sound cards and a USB sound hub
and a USB Plantronics head set/mike all in one puter. I have a TV/cd
player internal card that works better on its own sound card, the
other internal sound card is for digital modes on ham radio, the USB
headset I use for VOIP and the sound hub for another VOIP radio link.
I would suggest you purchase a completely seperate make of sound
card so there is no conflict of software.
The other tip is you must select each time from the audio properties
what sound card you are wanting to use.
Best of luck
PeterG

Allan Copland wrote:

Hi,

No, what I meant is that the audio quits and the analyser doesn't scan. It doesn't seem to be locked up, just doesn't work.

I'm running WIN2K and SP4 on an Athlon2000 with 256Mb of RAM.

The task manager still reports the program as running.

The radio works perfectly on the supplied Icom software so I dont think it has to do with the actual radio.

I've tried various versions of TalkPcr including the latest one and they all behave the same way.

Could it be to do with serial port settings I wonder?

Kind Regards,

Al.

If I'm not mistaken, you will not have audio with the
spectrum analyser on as a matter of design...when you
say the program does not continue, do you mean it
locks up?

Hi,

More on the ICOM PCR1000 / Talkpcr problem.

This morning I set up the radio, opened TalkPcr (the main screen) and sat back to see what would happen. Sure enough, after ten or so seconds, the audio quit. I didn't do anything more but wait. After a while, the PC reported something like , 'communications problem, closing down to protect your EEProm'.

Apologies for not taking a more accurate note (it was 7AM after all) but I seem to have a serial comms problem.
With the ICOM software I have no problems at all. I use the radio quite a lot to monitor our local airfield traffic (Glasgow International) and it works 100%

I tried TalkPCR some considerable time ago and had the same problem. I never did manage to resolve it.

I tried it with two PC's, one an Athlon2000 running win2k/sp4 and the other a Compaq Pressario laptop. Both exhibit the same problem.

Regards,
Al.

That is strange, different computers...different versions of TalkPCR? Myself and others can attest that the TalkPCR software is grade A. I have never had a problem with it and find it so much nicer than the Icom software. I would suggest asking Pete(the creator) but as he has made it freeware I don't believe he will "support" it anymore. I would say maybe your eprom is corrupt but it works fine with iCOM? Anyone else out there have a suggestion.

Hi,
The Windows 2000/SP4 is the same operating system in both
computers...so maybe is a issue with TalkPcr and this operating
system.

From: Allan Copland
Topic: 2578 Message: 2591

Hi Folks,

I have cracked the problem. It was caused by the ICOM supplied serial lead having a fault. I changed it for a cheap computer type serial lead and voila! Success.

TalkPcr now works 100%
Seems the lead has been faulty since new.

I got a nice scan last night of DC-30Mhz during an aurora. Nice one.

Kind Regards,

Al.

Hi C Dust.

I've owned the PCR-1000 for a few years. Its a great little radio so long as you dont connect it to a longwire aerial.
After cursing Pete for several years I have to take my hat off to him. It wasn't his fault after all.

TalkPcr is a wonderful piece of software. I take my hat off to Pete.

Regards,

Al.

2594. Improve your HF reception with the LOWE PR-150 Pre-Selector

Yahoo group: PCR1000
Date: 2004-07-28 20:22:51 UTC
From: Arcticpeak
Topic: 2594 Message: 2594

Recently I bought a used LOWE PR-150 Pre-Selector from a friend, and as I have suspected for a long time this pre-selector really improved the reception on frequencies below 30 MHz on all my wideband receivers (WINRADIO WR-1550e, ICOM IC-PCR1000, YAESU VR-5000).
The input circuitry of those receivers gets easily overloaded by strong out of band stations causing the interference and desensing of the band you actually want to listen to. With the LOWE PR-150 I'm now running a 100 m random wire to all of the above mentioned wideband receivers and receive stations almost as good with those receivers as my dedicated HF receivers (KENWOOD TS-2000X, KENWOOD R-5000, ICOM IC-706MKIIG, ICOM IC-R75, ICOM IC-M700TY) (Yes, I do know that the TS-2000X, IC-706MKIIG, IC-M700TY actually is transceivers!)

The difference is amasing, with my wideband receivers (WINRADIO WR-1550e, ICOM IC-PCR1000, YAESU VR-5000) connected directly to the antenna the S-meter rises and the weak signal disappears, by connecting the LOWE PR-150 the S-meter level decreases and the weak stations emerges from the background noise.

So everytime you tune away a bit on the pcr1000 you have to manually
tune the preselector as well? You can no longer do search or scan?
I guess that's why it is not used that much by the SW listeners?

This is correct, it is one of the drawbacks by using a pre-selector, but I never scan on HF any way, and the bandwith of the preselector is not so narrow for tuning in the same band. Actually it ain't much hasle with it at all, and the improvement in reception is so large, that the ekstra effort is well worth it. And of course you can bypass the pre-selctor at any time it suits you, just by pushing a single button.

The bandwidth and Q of the filter has a lot to do with the antenna impedance.
Some common tuner settings, and frequency, 7.1MHz:
28pF, 13 uH, SeriesR=801 ohms, 7.09MHz

500 Ohms from a longwire 50 Ohms 5 Ohms from Antenna tuner using matching transformers
Bandwidth 4.4 MHz 442KHz 44KHz
Q= 1.6 16 160

Now, the BCC preselector uses a matching transformer that takes the 50 ohms from a proper antenna and brings it down to around 5 Ohms, yielding 'ten times' better filtering action...
http://www.bavarian-contest-club.de/projects/presel/presel.pdf

The other thing I noted was with what happened if I decided to tune the same frequency using other bandselect positions:
103pf, 4.9 uH, Series R=218, 7.08 MHz
500 Ohms 50 Ohms 5 Ohms
Bandwidth 16 MHz 1.6MHz 162KHz
Q= .44 4.4 44

And finally;
180pF, 2.8uH, SeriesR=124Ohms 7.09MHz
Bandwidth 28 MHz 2.8MHz .284KHz
Q= .25 2.5 24

So, as you can see, the antenna really sets up the pre-selector. And hooking a piece of wire to a piece of coax isn't going to tune much. I'd guess the stock PCR antenna is 600 Ohms at 30 MHz, and 6000 Ohms at 3 MHz so putting that on a tuner won't preselect anything.
One product that will help match your longwire AND HELP PREVENT STATIC DISCHARGES (pre-strike charged clouds) is a Longwire Balun.
By mounting this near a GOOD ground, this will provide a discharge path OUTSIDE your radio, and help ground your coax so the shield doesn't become an antenna.
Third, it also lowers the antenna impedance by factor of ten. And we know how that helps the tuner.

http://www.grove-ent.com/WR0130.html
http://www.palomar-engineers.com/MLB-1/mlb-1.html

My next idea is to replace TR2 on the BCC project with a simple 1 FET impedance transformer. Perhaps 5 Ohms is a bit low for a FET, but one that converts 5000 Ohms (PCR antenna) to 50 Ohms would help?
Good luck, and try the other band options and report back, Thanks!

Yes I found out that having some kind of tuner or preselector on the hf side helps out a lot.

By the way , nice website!

I have several antennas to choose from, but for listening I usually use one of my random wire's. For testing the Pre-Selector I used a 100 m random wire with a RF Systems Magnetic Longwire Balun (MLB)
http://www.universal-radio.com/catalog/sw_ant/1484.html
and my half-size G5RV.
The improvement was big on both antennas, but of course the biggest improvement was on the random wire, since the half-size G5RV don't pick-up as much RF energy as the random wire.

From: Allan Copland
Topic: 2594 Message: 2600

Hi,

I agree with the comments re preselectors.

Since the PCR-1000 is primarily a scanning receiver rather than a fixed station receiver, it uses switched wideband front ends which are prone to overload by signals in their (very wide) passband. Adding a preselector or even a simple PI or T type aerial (antenna for the Yanks) matcher makes for a big improvement becuse it reduces the level of offending signals in the broadband preamp.

Its easy to make such a matcher.. sometimes inaccurately called a 'tuner' from a couple of old domestic radio tuning capacitors and a home made coil.

My usual station receivers are the Racal RA1772, RA117 or Yaesu FR101, all of which have good preselectors. The downside (should you see it that way) of preselectors is of course that you are continually tweaking them for the best performance. It's rather a 'mechanical' process.. tune, tweak, tune, tweak!
Obviously not something you could build into a scanning receiver.
A clear case of 'horses for courses', but having said that, the PCR-1000 along with a matcher or preselector DOES make a very acceptable receiver. A CW filter would have been nice though!

Kind Regards,

Al.

If you're seriously interested in a PCR-1000 - buy one NOW!

Icom has run into a parts availability problem for this product. When existing stock at their dealers runs out, the new ones from Icom are expected to cost $100 MORE than the curent ones.

Clint Bradford, K6LCS

Do you think they will include an USB port?

2603. PCR1000 swiitched on permanently - How ??

Yahoo group: PCR1000
Date: 2004-07-30 15:55:30 UTC
From: John Faulkner
Topic: 2603 Message: 2603

This sounds like a simple enough thing to do, but it isn't if you have to turn the PC off every night like I do so the noise of the PC fans don't keep the missus awake!! Once the PC is off the receiver becomes inactive, even though the little green light remains on.

I DX video carriers on band 1 and need to leave the PCR1000 switched on permanently in order to maintain receiver stability (i.e. cancelling out the warmup drift which lasts for hours). Is there any modification which can be done to achieve this?

Cheers

Hi John

this can be one solution.......have you see our PCR1000 CPB project ?
Look at WoodBoxRadio site: http://www.cqdx.it/woodbox/wbr-home.html

Thanks for attention and best regards

Its been a while but you have to keep the DTR, CTS or RTS line true.
Once you find which one it is you just put in a toggle switch to do
it or solder the pin with a jumper wire on the DB-9. Then it will
stay on all the time until you turn the power off. I have seen it
documented before somewhere but believe it is the DTR line.

Wayne.

I saw a Icom note to dealers last week that said because of
inavailability of parts that they were going to discontinue the PCR-
1000.

2607. Keeping the PCR1000 on without the PC Connected!

Yahoo group: PCR1000
Date: 2004-07-30 17:09:11 UTC
From: ws4454
Topic: 2607 Message: 2607

Here it is. I found it again on the web.

To keep the receiver ON while unattended
Ted's tip followed a request as how to keep the radio on, with no cable or PC connected, "It is necessary to pull the DTR (pin 4) and RTS (pin 7) lines high on the RS-232 Serial port. This can be a little tricky if it's necessary to unplug the serial cable. A breakout box with the proper connections installed between the receiver and serial cable should work; just don't unplug the breakout box.

ENJOY.

Wayne.

2608. Sound cards dual output

Yahoo group: PCR1000
Date: 2004-07-30 18:21:51 UTC
From: peterxrm
Topic: 2608 Message: 2608

Hi all
there was a thread recently on this group about having two sound cards fitted in a pc and if problems could arise.
There is a tip in a UK puter mag I saw today and it goes like if you have a sound card that has 5.1 surround output select it and you then can have two seperate audio outputs of front and rear plus two inputs of mike and line. I tried it and it does work aok with two seperate inputs/ouputs.
If I had known this a while ago it would have saved the $$$£££ on purchasing a seperate sound card and installing it.

>>...that they were going to discontinue the PCR-1000...

It's a two-step process for us a consumers:

1. Existing stock at dealers will sell for current price.

2. New, remaining stock received from Icom will be at a higher price.

Cheers everybody. Thanks for the info. I will get this mod done as
soon as poss.

Recently I have also had the oscillator re-set (EX2099 software) so
the displayed freq matches the actual freq. I use Spectrum
Laboratory software and since resetting the osc it is clear that, at
frequencies between 50 and 70 MHz, I can now measure video carriers
to accuracies of greater than 1 Hz. Hence the need to leave the PCR
swithced on all the time to avoid drift.

The PCR1000 software is adjustable so you can reset to zero in the
event of any drift however.

Thanks for the help!

2614. Re: BeaconSee & PCR 1000

Yahoo group: PCR1000
Date: 2004-08-03 11:04:28 UTC
From: Wolfgang
Topic: 2612 Message: 2614

Hello Matty, I had hope the Beaconsee independently the Pcr-1000 heads
for. In the menu of Beaconsee under radio - Setup is setup Icom
radios. what however are the correct attitudes?

2615. TalkPCR.. a winner.

Yahoo group: PCR1000
Date: 2004-08-03 14:23:45 UTC
From: Allan Copland
Topic: 2615 Message: 2615

Hi Folks,

With TalkPcr now working perfectly after I replaced the ICOM serial cable, I decided to monitor the radio traffic at our local airfield. You can imagine my surprise when I checked about 12 hours later to find around 1500 wav files recorded and indexed on my hard disk.

Once again I take my hat off to the great Pete Mahy. He should be working for ICOM. Talkpcr makes a good radio into a superb one.

I just keep finding new uses for this incredibly versatile program. I'm still on the learning curve, but what a toy!

Regards,
Al.

Hello I am new to the group. I am using XP and have 4.5. I have had to twice in the last week restore to a earlier date to get sound back on the Icom software. the 4.5 seems to still work but the Icom program shows activty but no sound. Does anyone know why this is happening? Also does anyone know how to frame a fax? mine keeps coming in with the edge down the middle. thanks Dan

Hi dan,

I don't know if what you are referring to is the phenomenon that you get no audio when you are listening in CW of SSB (USB or LSB), while you are using the Bandscope. That is a problem of the PCR-1000 with the Icom software. If you would use TalkPCR (which IMHO is the very best software for the PCR-1000) your Bandscope would freeze, but at least you would still have the audio. I think the TalkPCR solution is better (kinder), but whatever your opinion of the various software solution, the PCR-1000 cannot operate the Bandscope and the BFO at the same time - which (though not very elegant) is something I can live with.

I hope this is your problem. If not I don't have a clue as to what may cause your problem. In that case you might want to elaborate a bit more on your problem and tell us when your problem occurs. As to the fax I hope someone else can tell you more, as I have no experience with faxes...

Good luck!

Frank

For the framing problem soundlike the program fax is not synchronizing.This
may happen when you first bring up the fax decoder.

Oh That I didn't know. Sometimes that happens to me and I usually think its
not synchronizing properly.Maybe cause by some intereference.

Let me play with mine a bit and I'll get back with you on this.

This is with the Icom software only?

Usually in Radiocom that means your overdriving you soundcard a bit.

Are you using a line in on the soundcard so you can hear the audio through you pc speaker?

If so back down on the audio from the Icom software.Also you maybe overdriving the soundcard via the PCR itsself.

If you are running the speaker out from the pcr to the line in then open your pcr up and change the sound settings to earphone..

Glenn

This is with the Icom software only?

Usually in Radiocom that means your overdriving you soundcard a bit.

Are you using a line in on the soundcard so you can hear the audio through you pc speaker?

If so back down on the audio from the Icom software.Also you maybe overdriving the soundcard via the PCR itsself.

If you are running the speaker out from the pcr to the line in then open your pcr up and change the sound settings to earphone..

Glenn

Hi dan,

I don't know if what you are referring to is the phenomenon that you get no audio when you are listening in CW of SSB (USB or LSB), while you are using the Bandscope. That is a problem of the PCR-1000 with the Icom software. If you would use TalkPCR (which IMHO is the very best software for the PCR-1000) your Bandscope would freeze, but at least you would still have the

audio. I think the TalkPCR solution is better (kinder), but whatever your opinion of the various software solution, the PCR-1000 cannot operate the Bandscope and the BFO at the same time - which (though not very elegant) is something I can live with.

I hope this is your problem. If not I don't have a clue as to what may cause your problem. In that case you might want to elaborate a bit more on your problem and tell us when your problem occurs. As to the fax I hope someone else can tell you more, as I have no experience with faxes...

Good luck!

Frank

Quite UNTRUE. CW, USB and LSB are all FUNCTIONING options from the spectrum analyzer window. Try TalkPCR 2.99D and see. If it doesn't work, your PCR may be
bad (that's such a terrible word).
As far as the no audio, I'd use the chassis speaker to troubleshoot a radio audio problem.
I often don't have my audio going through my pc, I use a hardware DSP. But I do have pretty
good luck with the audio going into MIC IN. (TV goes into Line 1)
Check the squelch and make sure Tone squelch is off. Double click the button and click
OFF in the just opened window.

I should of made this clearer. I have the audio connected to the computer and when this crazy has happens I can pull out the audio cable and sounds comes through the internal speaker. so it is a problem between the Icom software and the sound card? the model 1000 I have does not play in stereo when the switch is in the phones position, it only plays in the left. I even have a stereo mono adaptor in line and it still only plays only in the left. the 4.5 in the DSP mode plays both speakers. with DSP off it plays just left.

It's sounding like a cable problem...?
A. The PCR -1000 is a mono device. Left channel is the TIP of a stereo connector.
B. A Mono plug Shorts the R and GND in a stereo connector, like putting a single earphone in a generic walkman, and a stereo/mono adapter generally shorts L to R converting stereo to mono.
It sounds like your pcr-1000 is fine and you have a cabling/ computer config problem.
Stereo DSP? That's a fair amount of overhead for a 'redundant' channel...
This is interesting..." I even have a stereo mono adaptor in line "
Your audio IS MONO. Your Input is STEREO. Don't you want a Mono >Stereo adapter???

When I hooked up the 1000 I had a brain fart! I was using 2 mono> stereo adaptors!!!. Thanks to you Skip I discovered it when I doubled checked! makes all the dif in the world in the 4.5 it is a completely dif experience, completely! I have to see if the dead audio trouble in the Icom program ever comes back. thanks so much Dan

Thanks to a very knowledgeable person who knows the 1000 very well I have discovered my trouble. The XP in my computer, by itself somehow, mutes my soundcard when I sometimes open the Icom software? when I opened my Volume window the line-in was checked mute! When I opened 4.5 the wave was checked mute??? Now I never ever even noticed before that you could mute these or even would ever have a need to. So I am sharing this with all so if anything like I have been going through you guys will now know why! Thanks to all Dan

2629. IcomControl 3.3 question

Yahoo group: PCR1000
Date: 2004-08-06 19:00:03 UTC
From: digi9345
Topic: 2629 Message: 2629

I have been experimenting with IcomControl 3.3 and I have found it to be a nice program for controlling my PCR-1000 but I have a question. How do you program the memories? The program's help information explains it and it sounds very simple but I still can't do it most of the time. I tune to a fequency that I want to save, right click the mouse on the memory button I want to store into, and click on 'save' but when I do the right click, the radio reverts back to whatever frequency was already in that memory position. What am I doing wrong?

John K7SVV

Just so everyone knows which program John seems to be talking about. I think it is the program that is found at this link, and not the Icom supplied sofware.

http://www.arachnoid.com/icomcontrol/

Other than that I don't know much about the program.

Could someone answer some questions for me about the PCR-1000

Does the Icom pcr-1000 have a discriminator tap so you can use
program like Acars, Etrunker, Trunker Software to listen to those
systems ???

Also can the Icom pcr-1000 trunk track Apco-p25 system ???

I have not received the email myself, did anyone catch
the headers of the email so this person can be
reported? Also, that person may be infected with a
virus that sends its self out through snagging
addresses from that person's address book.

I'd be interested to know what it is. I have a machine
that I experiment with. If it gets infected I just
wipe it and re-image with ghost. In a case where
infection is very probable, I disconnect it from my
network to avoid the virus propagating.

If anyone still has the email, could they forward it
to me? Just for the heck of it.

The headers are completely forged and probably will not yield any useful information about the actual sender. This is the main problem with this type of virus, it is very difficult to track down the infected party.

Subject: RE: [PCR1000] Suspicious email alert...

I have not received the email myself, did anyone catch
the headers of the email so this person can be
reported? Also, that person may be infected with a
virus that sends its self out through snagging
addresses from that person's address book.

I'd be interested to know what it is. I have a machine
that I experiment with. If it gets infected I just
wipe it and re-image with ghost. In a case where
infection is very probable, I disconnect it from my
network to avoid the virus propagating.

If anyone still has the email, could they forward it
to me? Just for the heck of it.

You don't need discriminator output for ACARS.
If you like to receive acars then download a free program called acarsd.
Type it into a search engine and go to its website.

Could someone answer some questions for me about the PCR-1000

Does the Icom pcr-1000 have a discriminator tap so you can use
program like Acars, Etrunker, Trunker Software to listen to those
systems ???

Also can the Icom pcr-1000 trunk track Apco-p25 system ???

Thanks for the info Glenn, I have found with my bc250d scanner the acars programs work a lot better if you have a discriminator tap on the scanner, as far as the other programs I mentioned you do need a tap to use them.

I sent emails to Paxton.com and Comcast.net yesterday.. Haven't heard a
reply from them yet!

The Zip file contains an exe which is probably a Virus/Trojan. I looked
through the exe with
a hex editor and it contains alot of url's with jpg extentions.
It looks for or renames the exe to win_upd2.exe, WINdirect.exe & dll.exe,
FIREWALL.EXE,
winxp.exe to name a few... And about 20 other filenames as well...

Here is the header of the message:

Received: from Big-Blue.org (firebox.paxton.com[216.140.22.2](untrusted
sender))
by rwcrmxc11.comcast.net (rwcrmxc11) with SMTP
id <20040809171442r11002djboe>; Mon, 9 Aug 2004 17:14:42 +0000

It seems I am the target of someone's joke (again). My other hotmail account that I use for yahoo groups
is also being used in this scam..
Guess someone out there doesn't like my programs? Who knows...

I can assure you that my machines are virus free.. Norton Anti-Virus is updated weekly. I haven't been
infected in over 4-5 years now...

Regards,
Jay

From: Terry Griffiths
Topic: 2629 Message: 2646

Problem is that your Email address has been picked from somebodies address book by the virus which then sends "you must view this file" type messages often with an attached .zip file. As the other guy sad before don't open any attachment if you do not know the sender and even then be very cautious.

Cheers

Just received my PCR-1OOO, and the first thing I looked for was the manual
but they did not provide one so I thought the best thing to do is print out
the manual I got from the Icom site, it's 60 pages but it will be a great
help to have a hard copy beside me when I'm trying to figure everything out
about this receiver. Well good luck learning everything the printer just
finished so I have some reading to do.
Steve

That's kind of a difficult question since you didn't mention what
you're
interested in doing...Do use a search engine to find frequencies in
your
area, mostly for police and other public services. Also, go to the
pcr1000 archives and do some reading about what's been going on in the
past...
Good Luck,

the unit now isnt it? scancat gold is a 160 dollar program you
can download the demo for free off the net. if u save it to disk and
istall it it last for 59 min. on the demo. after your time is up
compare the file sizes of the program in killobytes. delete the files
on your computor that have changed size and replace them from your
disk you have saved. you now have the program with no time
constraints or redownloading free software!! enjoy

Hi,

check out the sourcecode of pcrd or qtpcr, there you should be able to
find a working implementation ....

Hmmmmmm,

the code I mentioned is GPLed, as long as you dont use it commercally
or dont publish the sourcecode of your program (which is a question of
ethics primarily) you can "steal" or reuse it - whatever you mean with
this.

Best regards
Bernd

2682. PerCon MCH Files

Yahoo group: PCR1000
Date: 2004-08-27 23:42:37 UTC
From: Ian
Topic: 2682 Message: 2682

I am using the Icom v2.2 control software on the radio. I seem to be having some problems uploading PerCom .MCH files to the radio. When I have saved the file I then look at it file using the text editor all the channels and banks are there, and complete, with no gaps. After uploading to the radio memory and using the VIEW option I see that there are frerquent gaps where the data did not write to the channel. Some are there, some not, and it seems to be variable. Different files have different BLANK channels.
Any ideas or solutions to this? Other than use a different program to "capture" the frequencies?

Ian KD7SYD

2683. RE: [PCR1000] Digest Number 726

Yahoo group: PCR1000
Date: 2004-08-28 16:57:21 UTC
From: iwallace
Topic: 2683 Message: 2683

An answer to my own question...

The PerCon database program allows the capture of various PW (Public Service Pool) frequencies. It also writes the file (based on your search) to a comma delimited file which is used by the PCR1000's v2.2 control software. This file, when written to disk directly from the PerCom Internet page, has a .MCH extension. It is basically in the raw PerCom format below. There are 10 "fields" in each channel listing, each channel separated by a comma. The example below is that of a "good" channel listing.

[BANK00]

BANKNAME=My File

ACTIVECH=00

00=PORT AUTHO,,155.625,FM,15k,OFF,5kHz,OFF,OFF,OFF

The problem is that when the PerCom file is written as the .MCH file it sends along every comma that's in each channel line. There must be ONLY nine commas in each line. Here's how the problem arises. If a channel listing has the "name" of the service written with a comma, then there are 10 commas in the line and the PCR1000 software will not accept it. That line will appear as a BLANK. This is an example of a BAD channel line:

00=DUBLIN, CITY OF,,155.625,FM,15k,OFF,5kHz,OFF,OFF,OFF
The comma following the word "Dublin" is the one that fouls up the line. Of course you can open the file and remove each one, but there's an easier way to do it.

When the PerCon screen comes up with the file name, right click on the it. In the next pop-up window put your cursor on "Open with" and you will be given a choice of programs with which to open the file. Choose and click on "Notepad", a pure text editor.

Once the file is in Notepad, click on EDIT, then REPLACE. In the "Find what:" box enter a comma followed by one space. In the "Replace with:" box leave it empty - no entry at all. Then click on the "Find Next" box to make sure this is going to work correctly. Notepad will find the first occurance of a comma immediately followed by a space, such in DUBLIN, CITY OF. Click "Replace". The comma will "go away". If this works OK, then click on "Replace all" and your file is fixed.

Another thing about the .MCH file. See the two commas together after the frequency service name?

00=DUBLIN CITY OF,,155.625,FM,15k,OFF,5kHz,OFF,OFF,OFF
If you want to you can put up to a 32 character "remark" between those commas. Just make sure you don't put a comma in the remark!!

The last thing to do is to save the file so that the PCR1000 software can read it. Click on "File", then "Save as". Enter the file name you want to use, WITH THE .MCH EXTENTION. If you just click "Save" all you will have saved is the corrected comma delimited file but with a .TXT extension, and the PCR1000 software will not read it. For example your correct file might be called "Local Police.mch".

That's all there is to do! I have done some cut and paste using MS Excel to combine some of the PerCom files so that they will write the comma delimited files which I then "clean up" as described above. If anyone wants a PerCom "PW" file of central Ohio (Franklin, Delaware and Union counties) I will be happy to share it. There are, I believe, five banks of frequencies in my file.

Happy scanning and 73's

Use the "regular" audio output and adjust the level using Windows Volume Control or equivalent.

It works just fine with Satsignal and WXtoImg.

vvoc2003 <matty@...>

2687. Frequencies

Yahoo group: PCR1000
Date: 2004-08-31 15:04:37 UTC
From: merlin_20832
Topic: 2687 Message: 2687

Can frequencey files be imported into the icom pcr 1000 2.2
software? If so how?
Thanks
Merlin

2688. Web Control of PCR100/1000?

Yahoo group: PCR1000
Date: 2004-09-01 14:16:35 UTC
From: Mike
Topic: 2688 Message: 2688

Hi,

Does anyone know of any software to enable web control of a PCR100 or 1000?

Thanks

Mike

2689. communication error?

Yahoo group: PCR1000
Date: 2004-09-01 22:47:59 UTC
From: lee rich
Topic: 2689 Message: 2689

Hi, i tried to run SKYSWEEPER (A DECODER) and my PCR1000 together...since then the POWER LIGHT flashes on the 1000 and when i tune with the rotary i get a 'COMMUNICATION ERROR' and the programme exits and switches the radio off.I am using the original ICOM SOFTWARE . What is happening here ? I closed everything down ...restarted and it seems ok for now .It only seems to do it when i tune around with the rotary.

Consider joining us at: http://www.dxtuners.com

They will set you up with the software etc. - but only if you are interested in sharing your pcr100 or 1000 with other users around the world. Requires a linux server, for about $400 if you want it to operate stand alone. I operate the "Long Beach,CA dxtuner on there. Email me directly and not on this list if you want more details.

cgernaey@...

(WG6G)

Hi,

Does anyone know of any software to enable web control of a PCR100 or 1000?

Thanks

Mike

2691. FT: Icom 207H for Icom PCR1000

Yahoo group: PCR1000
Date: 2004-09-02 14:31:32 UTC
From: Chuck Yarbrough
Topic: 2691 Message: 2691

Hi all--I have an Icom 207H 144/440MHz transceiver with separation kit in excellent condition that I would like to trade for an Icom PCR1000 in good shape. The 207H has had the MARS mod done for transmit using those frequencies.

Please respond to me offline at wampus@....

Many Thanks,
Chuck

2692. Annette and Anthony Martini in Sarasota,Florida need your support!!!

Yahoo group: PCR1000
Date: 2004-09-02 21:00:23 UTC
From: Annette.. Media do not want to Air our st
Topic: 2692 Message: 2692

I am asking from my husband Anthony and I for your support
by sending the message written below to all your friends
and ask them to send it to their friends.
The Media refused to Air our story and so we are determined
that our story of suffering and a crime committed against
us will not die. We are hoping that this Press Release
and our story will go to as many people as possible all
over United States and beyond.
We are fighting for justice..true justice and we will not
give up until we get justice...
Please read the message below and send it around.
To the Moderator, if you do not approve of this message
please feel free to delete it. If you decide to leave it
posted then I thank you from the bottom of my heart!!!
.....
A husband and his wife have been forced to sleep
and live in their car for two years now.
The Salvation Army said NO...United Way said NO..
the Banks said No..Credit companies said NO...
Merchant accounts said NO...everyone in Sarasota
that knew their situation did Nothing....turned
their backs on them....
Two Attorneys stole the husband's intellectual
property and computer equipment,,,backups..
softwares and a System the husband was working
on to protect every man, woman and child in
United States by Land, Sea and Air...these
Attorneys then made a false police report
using their POWER as Attorneys and had the
couple FALSELY ARRESTED AND THROWN IN JAIL..
The case was dropped and abandoned but the
Courts and the Cops refuse to give the
husband back his things even though they
have the proof in their hands,invoices
etc. that these things belong to the
husband...the police and courts refuse
to take all eye scans,fingerprints etc out
of their database even though they are
INNOCENT!!! They were never charged...
These Attorneys and their accomplices
are RESPONSIBLE for this husband's wife
losing her baby and caused her to have a
miscarriage in her pain and suffering!!!
This has caused them to file a 50 Billion
Dollar Lawsuit against the State of Florida,

the Attorneys and their accomplices and all.
They work for themselves making only enough
to pay for food and gas and the hosting for
their websites that the husband has created
trying to provide for themselves although
for the moment they do not have a phone or
a roof over their heads.
They go to the library checking their emails
and their websites.....
For those who have time please read their
Lawsuit posted on their websites. You will
not believe the corruption from Attorneys,
Police, Judges and the Courts in Sarasota,
Florida...
Please read their Press Release by clicking
on the link below...the Media did not show up...
and refused to Air this story on Television or
radio or newspaper...
http://www.pishnut.com/press_release_june3a.htm
Please support them and pass this to all your friends
and ask them to do the same to support and help this
couple find true justice!!! Election is around
the corner do you want this same people elected
that do these kinds of things in the courts
and among the police force etc???
Read their 50 Billion Dollar Lawsuit or at
least part of it...
http://www.pishnut.com/martini_and_martini.htm
They have finished writing Novel One of three
of their true story of which the last one will
be about the horror they lived in Sarasota,florida!!
It is in novel form and not a biography...vote and
leave a message of support for Annette and Anthony
Martini...
http://www.deadlockconspiracy.com/
they will soon be posting all the evidence
on their website as soon as they can..the invoices
etc..proving without a doubt that they are innocent
but the courts and cops still refuse to give them
back their things and instead threw out their appeals
but refuse to send them the order from the courts..
more corruption...the attorneys have filed applications
to have the 50 billion dollar lawsuit dismissed..
They are thinking of starting a petition to have corrupt
people from the courts etc removed and gather many names
from people who support them!!!
Please help by sending the press release to all your
friends!!!!! Don't forget to vote and leave a note...
Thank you...

Of course this is not the correct forum to post this
but I wonder how it is that if the police falsely
seize your assets, accuse you of crimes but fail to
convict, and refuse to return your assets, one is then
compelled to live in one's car for two years.

Well this typically happens.Everything inside you house is by all means yours but if something goes wrong and its seized well then to get it back you have to prove its yours.
By the way I am not a big advocate in rights but ever since 911 well just think of all the power the government has now to make you life a veritable hell, and that's with no conviction.

Glenn

Now don't don't get me wrong, I'm a small "l"
libertarian. I realize the government can and does
take private property unjustly leaving owners little
recourse. However, the only thing they claim the
government has taken is some computer hardware(which
as we all know is worth 30% of the original purchase
price within 6 months) and some intellectual property
which he claims to be of high value. That claim of
value can be said to be dubious at best. Back to my
original point. How does that force you to live in a
car for two years? I can walk out of my house with
just the clothes on my back and be back on my feet in
6 months if apply myself.

If you are trying to set up your receiver on the web
you need to read this link

http://www.javaradio.com/servlet/IBMainServlet/?ib_page=87

You'll need a 1ghz box with redhat or mandrake linux
both free. My advice is to learn the the operating
system first or have a friend help if you've never
used it. Once you have the necessary services running
you need to type certain commands to give them SSH
access to your linux server which must be outside the
firewall or you need to know how to open the specific
ports on that machine. You may have to enable DHCP.
Then there are a few steps they must walk you thru.
They can't install the operating system for you. You
have to do it first. Then do all the updates. Then
they will walk you thru the specific commands to
enable it to be a portal on the dxtuner gateway. I
had one set up which is down due to server crash. But
it will be back up soon.

It's a lot of fun to be able to tune your radio from
anywhere else: work, school,friends houses etc. And
its a good way to get people interested in the hobby.
I'd read the links on their web site on how to install
too. DSL, or cable is recommended.

If you have specific questions send your request for
info to:

node@...

There are a few people that can answer your questions.
Kelly may be on vacation.

Good luck and let us know when you have it online.

My Shortwave Log program provides a web interface for the PCR-1000.
All you need is Windows 2000 Pro or Windows XP Pro. You need XP Pro
because XP Home does not include IIS.

From: Ryan Villa
Topic: 2688 Message: 2709

Hi Bob and all,

I am not completely ignorant, but I have no idea what IIS stands for; however, I am able to run the Shortwave Log control program with easy success with XP Home.

Depending on your purpose for setting up remote control of your 1000, I would recommend Shortwave Log over DXtuners simply because you do not need to learn another operating system or dedicate a machine to unix and the web control of the radio. However, if you want to make the radio "public", i.e. having more than one person able to connect to it, DXtuners would be the way to go.

Ryan

IIS is Internet Information Server. it comes on the XP pro CD. It works with ASP , active server program that makes a HTML page from dynamically collected data.

From: Robert Sillett
Topic: 2688 Message: 2715

I'm sorry for using jargon in my previous post. I should know better.

IIS = Internet Information Server, otherwise known as the Microsoft web server.

The web front end for Shortwave Log's remote control program only works with IIS.

XP Home does not come with IIS, nor can you install it into XP Home. You need XP Professional to get IIS. (Note: you can hack IIS to install into XP Home, but it's a nontrivial process and is not supported by MS.)

Now you can still use Shortwave Log to remotely control your PCR-1000 under XP Home. You just have to use the "fat client" that's built into Shortwave Log. Since you don't have IIS, you can't run the web front end.

So if you're running XP Home and publish your PCR-1000 to the Internet, any remote clients need to run Shortwave Log. If you have XP Professional (or 2000 Pro), you can run the web front-end so that remote clients only need to use Internet Explorer to remotely control your PCR-1000.

Now print out THIS message for your son's International Copyright Law
class:

Just because someone has published something does not necessarily
mean
it is public domain. You can still violate copyright law by using
one's published works.

If the author/creator published their works with a disclaimer or
statement attached releasing the work to the public domain, then you
are free to use it in the prescribed manner.

But merely because something was "published" does NOT place it in the
public domain.

I write software for a living Clint so how about you drop the patronising attitude.

Do you leave your front door wide open because 'it's the law' that people can't come in?

You may wish to pursue lessons in irony. And get a sense of humour.

I ask you...

I would not be so naive to give you the source code! :-)

I suspect the flippancy of my original reply somewhat evaded you.

Yes it is wrong to steal, use, borrow work - but be realistic - It is simply a necessity to take precautions to prevent it happening.

Point is this guy has been moaning for ages on this forum and he either needs to name names or shut up!

Could you guys take this outside? I'm not particularly interested in observing this little skirmish. It obviously won't be solved here. Let's stick to the use of the PCR-1000, a great little black box!

So as to start a new thread..... I'd be interested to hear how some of you have used the Packet output. Any good combinations of Amateur Packet software to be used with the PCR software or TalkPCR?

Thanks.

Dave,

I am not sure if this guy is just a wind up merchant or not - either way accusations of theft are serious.

As for the packet output - what in particular are you hoping to decode?

Mine is works extremely well with PDW (POCSAG?FLEX/ACARS etc) and reasonably well with weather satellites.(WXtoIMG)

Yahoo group: PCR1000
Date: 2004-09-07 17:15:04 UTC
From: David Guretzki
Topic: 2650 Message: 2726

I'm really a beginner to the PCR1000. I've had some limited success with Amateur packet, though the output seems to come through garbled at times. It almost seems that I do better using the speaker output rather than the packet output. I've picked up the International Space Station on occasion on 145.800 using TalkPCR and MixW and also some local packet stuff.

David VE5DLM

P.S. What is PDW?

PDW is general decoding software - great for pagers, acars etc.

http://home.kabelfoon.nl/~pdw/alp/pdwacars.html

There is quite a multitude of software out there both free and shareware.

Do a Google on it and take your pick!

Subject: RE: [PCR1000] Re: How to write a program for ICOM PCR1000?

I'm really a beginner to the PCR1000. I've had some limited success with Amateur packet, though the output seems to come through garbled at times. It almost seems that I do better using the speaker output rather than the packet output. I've picked up the International Space Station on occasion on 145.800 using TalkPCR and MixW and also some local packet stuff.

David VE5DLM

P.S. What is PDW?

Dave,

I am not sure if this guy is just a wind up merchant or not - either way accusations of theft are serious.

As for the packet output - what in particular are you hoping to decode?

Mine is works extremely well with PDW (POCSAG?FLEX/ACARS etc) and reasonably well with weather satellites.(WXtoIMG)

Could you guys take this outside? I'm not particularly interested in observing this little skirmish. It obviously won't be solved here. Let's stick to the use of the PCR-1000, a great little black box!

So as to start a new thread..... I'd be interested to hear how some of you have used the Packet output. Any good combinations of Amateur Packet software to be used with the PCR software or TalkPCR?

Thanks.

james hazell stolemy works.

he lies and wont pay for my work he did use.

now he say he can use whatever he want cause he
cant be truthed.

well i got some forhim!!

look atcode hazell......

see the time coded ??

your works will destroy harddisk on 2nd use!!

you think you are smart but not.

maybe cause i have brown skin you like to cheat
me?!

ha!!

From: Ryan Villa
Topic: 2688 Message: 2728

Thanks Bob.

Yes, you are correct; I can only run it with Shortwave Log Client/Server software. I was under the impression and felt others like myself who are not computer gurus may also be under the impression that it was impossible to CONTROL at all the 1000 with Shortwave Log running under XP Home.

Thank you again for clarifying.

Ryan

From: jjintokyo
Topic: 2732 Message: 2732

Dear All,

I have just finished IP1kC, a program that allows you to fully
control the ICOM PCR1000 & PCR100, right from your Palm PDA.
It is very easy and fun to use and includes some cool features like
scanning.
Please check it out and let me know what you think.

http://geocities.com/jjintokyo/

Cheers,

JJ in Tokyo.

1. I have never written software for the PCR1000

2. I have no idea who you are

3. I have reported you to abuse@... and the list. owner

4. Mail me directly rather than annoy everyone on this list.

5. Get a lawyer. I'm serious.

james hazell stolemy works.

he lies and wont pay for my work he did use.

now he say he can use whatever he want cause he
cant be truthed.

well i got some forhim!!

look atcode hazell......

see the time coded ??

your works will destroy harddisk on 2nd use!!

you think you are smart but not.

maybe cause i have brown skin you like to cheat
me?!

ha!!

Geonaer, (What kind of name is that anyway?) I suggest you put up or shut up! Or perhaps a better suggestion would be to ban you from the group all together as ive heard nothing positive from you yet. If James is as you claim, then go to a Legal adviser and sue him, what ever you do, I wish you would give over and go learn how to write English!

Bored,
Dave.

From: Skip Flem
Topic: 2736 Message: 2737

I guess there is one correct baud setting, seeing how I haven't looked
mine in two years...
NO, NOTHING gets changed for different modes. The radio uses the COMM port
for frequency and bandwidth and detector selection. The decoding of the
FAX, or
Teletype, or singlesideband is done at the computer, with the data going
over the
audio line.

Hi JJ
Great and very nice job!!!!!!!!!!!!!!!!!!
Great piece of work and good looking(interface)too!
Petty that it doesnt work with Pocket PC PDA's, I have two and they
are useless... :-((
Are you planning write something like that for Pocket PC?????

Five stars to your work.

I first connect to the PCR-1000 at 9600 baud, then I check to see if
the UT-106 is installed, then I set the baud to 38400.

Bob

Really interesting looking software and great for making the PCR1000 more portable. But would appreciate details of the interface especially for someone very out of the way who cannot readily obtain gender changers etc etc...

Thanks

Graham

2741. Changing COM Port Setting

Yahoo group: PCR1000
Date: 2004-09-11 02:33:21 UTC
From: Ian
Topic: 2741 Message: 2741

Is there a CONFIG or similar file that allows one to change the COM port setting for Bonito 4.5? I need to reset it to COM2 but the software will not boot without the correct response from the assigned port which I believe is 4 or 5.

Changing the RS-232C port

1) Click the [POWER] button in the tool bar to temporarily pause the program.

2) Click the [PORT] button to bring up the [RS-232C PORT Number] dialog box.

3) Click the desired port COM number to choose it.
4) Click the [OK] button.

Yes, this works great, however the Bonito software is supposed
to "handshake" with the com port(s) to find the active one connected
to the radio. All I get is a beep and a "fatal error" message. There
must be some kind of a file that has the parameters for the assigned
com port for Bonito. I can find the Icom file and change that, but
the Bonito is the problem!

2746. PCR1000 and weather satellites

Yahoo group: PCR1000
Date: 2004-09-11 23:10:33 UTC
From: cymrurob
Topic: 2746 Message: 2746

Hi,

In my possession, I have:

1x PCR1000
1x APT Turnstile antenna
Connecting Coax
Decoding Software (WXSat)
Tracking Software (WXTrack)
PC + Soundcard

My question is, how do I lash it all together to make a working weather satellite reception system? I have already tried, but have received very weak, unusable signals. How have others done this? What success have you had?

Many thanks,
Rob

2747. Re: [PCR1000] PCR1000 and weather satellites

Yahoo group: PCR1000
Date: 2004-09-11 23:52:06 UTC
From: James Hazell
Topic: 2746 Message: 2747

Rob,

Use the discriminator output (mono jack) and feed that in to 'Line In' (Stereo jack) on the soundcard.

Make sure you have Line In set to record (Windows mixer / Properties / Recording)

Set Volume at around 70% initially. You can fine tune during a pass to get correct blacks and whites on the grid.

My attempts are far from perfect but useable - using exactly the same kit as you (Except I use a registered version of Wxtoimg). NOAA 17 is often iffy but 12 and 15 are generally quite good.

www.441creative.com/weather

Cheers

James

From: Arcticpeak
Topic: 2746 Message: 2749

In my opinion using the audio output gives better results than using the discriminator output (Data output) on the PCR1000. The discriminator output have to much noise, because the audio filtering is removed.
I recommend using the compination WXSat and SatSignal to get natural looking pictures.
Some samples of my pictures from Norway and Greenland:
http://www.arcticpeak.com/radiopages/satellittbilder.htm

The PCR1000 is a very good WXSat receiver.

Martin

James Hazell <james@...> wrote:
Rob,

Use the discriminator output (mono jack) and feed that in to 'Line In' (Stereo jack) on the soundcard.

Make sure you have Line In set to record (Windows mixer / Properties / Recording)

Set Volume at around 70% initially. You can fine tune during a pass to get correct blacks and whites on the grid.

My attempts are far from perfect but useable - using exactly the same kit as you (Except I use a registered version of Wxtoimg). NOAA 17 is often iffy but 12 and 15 are generally quite good.

Subject: [PCR1000] PCR1000 and weather satellites

Hi,

In my possession, I have:

1x PCR1000
1x APT Turnstile antenna
Connecting Coax
Decoding Software (WXSat)
Tracking Software (WXTrack)
PC + Soundcard

My question is, how do I lash it all together to make a working weather satellite reception system? I have already tried, but have received very weak, unusable signals. How have others done this? What success have you had?

Many thanks,
Rob

Duplexer is a filter for combining two signals within the same frequency band. Diplexer is a filter to combine two signals in different bands.

I guess then that you would like to connect something like a 145Mhz antenna and a 170Mhz antenna at the same time to your pcr1000?

Or have you missunderstood the term and wish to use something like a 140-170Mhz antenna and a 400-800Mhz antenna with your pcr1000? In that case it is mush easier to accomplish. Search the internet, using google, for "diplexer" and you'll easily find several homebrew and ready made diplexers that doesn't cost much.

Duplexers are much more expensive and only works in a narrow frequency band.

Ubbe.

Interesting concept!
I too was considering using LabView to create a program to control the
PCR...
LabView is used extensively at my last work place and I bacame very familiar
is using/creating test programs with it.
I ended up using Visual Basic for my starting platform. Currently I'm
re-writting
the program in Visual C++...

Best of luck!

Regards,
Jay

I want to be able to listen to everything from the sats (UHF) to 160 meter shortwave. I know a discone will give me good recieve on the higher freqs but want good performance on the lower bands as well. Any ideas?

2765. RE: [PCR1000] PCR-1000 and SWL

Depending on space availability a long wire antenna is possibly the simplest antenna to rig for 2-30 Mhz receiving as long as you can make it say 50-60 feet if possible, a low power antenna tuner will also help to optimise its operation on the portion of the band you require but it is not absolutely necessary.

A good earth connection to an earth stake in moist ground also assists in the overall performance.

See MFJ for suitable antenna tuners.

For VHF / UHF a discone is a good broadband antenna, the ARRL handbook has designs that can be made from simple material or commercial units are fairly low in cost, use good quality coax cable to connect the discone to the receiver.

Good luck

Like others said, if you use a long wire you will experience overload on some or most lower frequencies. On my long wires, I installed an adjustable attenuator in line, Radio Shack part 15-678, $9. It has F type fittings so you may have to add adapters. The Diamond D-130J discone, $100, is a great antenna. It is rated for receive use above 25 Mhz, but it receives well down to AM broadcast with enough loss that it should not overload and you should not need the in line attenuator mention above. If you want only one antenna that will cover AM broadcast to 900 Mhz and above, without overload, go with a discone.

The front-end of the ICOM IC-PCR1000 gets overloaded by use of long antennas. Due to this it's better to use a Preselector instead of an antenna tuner. Many misunderstands the difference and the use of preselektors and antenna tuners.

The antenna tuner works like this:
It matches the impedance of your antenna (or in most cases; your antenna and the attached feedline) to the impedance of the receiver. The impedance of the receivers is usually 50 ohm. Some receivers like the the IC-R75 and others have an additional high impdance antenna input as well.
The antenna tuner DOES not improve the signal-to-noise ratio.
Antenna tuners are mostly used to match the impedance of a antenna (and it's feedline (depending on where the tuner is placed) to the impedance of a transmitter. Due to this, most antenna tuners available are aimed at the radioamateurs.

The preselector works like this:
It filters out noise and radiostations sending on other bands than your receiver and preselector is presently tuned to. The preselector and the receiver must be tuned to the same frequency band. The preselector prevents the front end of the receiver from being overloaded by out of band signals.
The preselector may have a significant improvement on the signal-to-noise ratio.
(This depends on the cause of the degraded signal-to-noise ratio.)

For the best possible performance for general reception with the ICOM IC-PCR1000 a setup using a Wellbrook ALA1530 (http://www.wellbrook.uk.com/ALA1530.html) for LF, MF and HF and a Dressler ARA2000 (http://www.dressler.com/products/antenna) for VHF and UHF will probably be the best sollution.
Adding a good preselector like the LOWE PR-150 improve the LF, MF and HF reception significanly. (No matter what antenna is used for LF, MF and HF reception.)

When active antenna components are used as the ALA1530, ARA2000 and the PR-150 care must be taken to avoid overloading.This care is simple, just avoid using the maximum setting of the pre-amp's when not necessary.

A small random wire antenna (10 to 15 meters) and a discone antenna is a lot cheaper sollution which also works quite well with the ICOM IC-PCR1000 for general reception.

I use the Radio Shack discone for my PCR-1000. While the discone is generally only for VHF/UHF, the performance of the PCR-1000 on HF with the discone is outstanding.

And I do mean outstanding. My PCR-1000 is much, much better with the discone on HF than with a long wire antenna.

The PCR-1000 is a bit prone to overloading. So while the HF signals are attenuated on the discone, there is no overloading on HF (or VHF/UHF). I do have a preselector, but I have no need for it when using the discone.

The discone doesn't work well at all on my other HF radios (Ten Tec RX-320, Sony ICF-2010, Lowe HF-250E), but for some reason it does on the PCR-1000.

My experience is the same as Roberts. I also have dsp. I sometimes use a 150' longwire & sometimes use both antennas together. The pcr1k overloads real easy, I've found that the only way to use the longwire w/o overload is to not mount the wire in the open & to keep it low to the ground.

I want to be able to listen to everything from the sats (UHF) to 160 meter shortwave. I know a discone will give me good recieve on the higher freqs but want good performance on the lower bands as well. Any ideas?

From: adagiu
Topic: 2782 Message: 2782

Hallo everyone,
I am a romanian seaman and , beeing at sea about half 6 months, it is a litle bit hard so far away from home. I saw on a ship a PCR 1000 receiver, used to receive weather charts and I understood that it is a very good radio receiver. I think that it might help me also in my job (weather charts) and also to enjoy my free time listening to a lot of radio stations(believe me - life is so boring on a ship). Has anyone any ideea where I can find one (second hand - I can afford about 200USD) and if there are also other pc controlled radio receiver that I can use (I heard about Winradio 1550e)? Thank you!
PS - Don't become a seaman! Stay home! Life is beautiful!

That's a difficult request...mine cost $335 (new). The only way I'd let
it go for $200 is if it got hit
by lightning... and the WinRadio's are even more expensive.
The only thing you're likely to find for $200 is someone's troubles.
Good Luck,
Skip Flem, NT1G

SOMETIMES you CAN find a bargain on eBay! I did! Guess the seller was
needing
some quick cash. I got a like new IC-PCR1000 in the box with all accessories
plus
an Icom SP-10 external speaker. All for $200.00 and shipping was included.
At the
time on eBay they were going for around $270.00 plus shipping.

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

2793. Icom IC-PCR1000 for sale!

Yahoo group: PCR1000
Date: 2004-09-25 16:20:40 UTC
From: Colin Acton
Topic: 2793 Message: 2793

Hi all!

I'm soon to put a PCR1000 on ebay for sale. Included with the actual scanner is the R232 cable, Power adapter and software floppy disks (v.1.31 software). Missing from the package is the orginal box and the supplied (crap) aerial.

If you're interested, email me and I'll add you to the list to be informed when it is listed. Will probably be starting the bidding at £120.00.

I'm selling as I no longer use the scanner for following ACARS and also now have a very demanding daughter!

Colin Acton
(Ebay ID shifty1725)

Thanks for the speedy reply Bill.
I've been searching for a couple of hours now but to no avail. Every
site I come across points me back to the closed developer's site.

If you could mail me the zip file for XP I'd be very grateful.

Thanks again.

These links are ok:

the homepage:
http://www.mahy.demon.co.uk/talkpcr/talkpcr.htm

full install:
http://www.mahy.demon.co.uk/tpv20/tpv24f02.zip

the exe only:
http://www.mahy.demon.co.uk/tpv20/tp24f02.zip

Have fun with this really wonderful software! :-)

Best regards,
Franz.

All three worked for me. First one brings you to a web page and the
second two where automatic downloads.

2805. Why your computer is running so slow !

Yahoo group: PCR1000
Date: 2004-09-26 03:26:56 UTC
From: charlottecasavant218
Topic: 2805 Message: 2805

Protect your privacy Online

Hello,
Have you noticed your computer running slower than ever?
The reason for that may have to do with online advertisers adding SpyWare or AdWare to your computer without your knowledge. Spyware is a common term for files that are installed on your system without your knowledge that allow companies to monitor your Internet activity. AdWare is software that will show you popup ads over and over.

What they don't tell you, however, is how these files can be extremely dangerous to your PC and could cause major problems with your PC.

To scan your computer for free, click here: http://www.spyware--nuker.tk

Our goal is to put an end to shady online advertising so that Internet users can enjoy the World Wide Web without having their privacy intruded upon.

We urge you to run the free scan!

Thank you for your time, and we hope that we have been of some help.

DOWNLOAD IT TODAY AND DON'T BE A VICTIM!!
http://www.spyware--nuker.tk

Topic: 2795 Message: 2812

I think there´s not really a user guide for it, but you can find
some informations about TalkPCR at the following site:

http://qsy.to/pcr/talkpcr.html

Especially you may have a look at this entry:
"A Detailed Review by Dennis Wish, PE "

But since even I learned it (by myself), it can´t be too difficult! ;-
)

Much luck,
Franz.

From: Robert Sillett
Topic: 2795 Message: 2814

If you're looking for a free radio program for that PCR-1000 that is supported, check out my Shortwave Log program. Not only can you use my program to tune the PCR-1000, but you can also publish your radio to the Internet as well.

http://www.shortwavelog.com

And here is a radio (not mine) that is curretnly online using Shortwave Log:

http://kc-hamnet.gotdns.com/RCSweb/

I'm guessing (that mean I don't know) that Icom is designing another unit to replace the PCR-1000.
Perhaps one that is easier to build, or find parts for. Winradio.com is getting ready for their lastest generation
of computer controlled receivers, ones that either lives in the PCI connector of your computer, or
an external version that uses the USB bus.
They are NOT in computer shops since it's generally RADIO people that buy them. MY late
Uncle used to sell them in his MARINE electronics store; he was an Icom dealer. He stopped
selling them when ICOM paired up with Bonito software, since there was a lot to problems with
the earlier version of Bonito, and he got a lot of returns.

TalkPCR will quickly check to see if your present eeprom is the same as the one you earlier SAVED
using TalkPCR. But if you never saved your original values, you have nothing to compare to...
EVEN if you use another software package, TalkPCR is you easiest way to save and protect your EEPROM.

Can anyone tell me why is so difficult to find (to buy) an Icom
pcr1000 receiver? Why it can not be found in a computer shop?

From: Paul Rapisarda
Topic: 2815 Message: 2821

adagiu/all:

pcr1000's are usually bought online or in a ham store, like Ham Radio outlet or the such. I have not checked lately, but do a search in Google for online stores. I have just purchased a used AOR3000 and in the middle of testing to see if its better sensitivity wise than the pcr1000. That's why I was thinking about selling the pcr1000.
So far I have not got there. Maybe in several weeks to a month I will decide. Sorry If I mislead you. From what I have seen of the AOR3000 it looks to have a good front end. I am having problems sometimes turning the scanner on, as it doesn't power up all the time. I think it might be the regulator inside, which there is a mod out for
replacing and upgrading with a new part.

this is to general scanner folks:

Have any of you had any knowledge of the dressler active antenna model number ARA1500. I have one coming. This was made in Germany. At this time has been discontinued and a new model has come out called ARA2000 which by telling about the part number it goes up to 2000 MHZ and the 1500 model it 1500 MHZ, but I
got a great deal so I well check it out.

2822. TalkPCR resgistration

Yahoo group: PCR1000
Date: 2004-09-27 19:11:48 UTC
From: Antonio Pena
Topic: 2822 Message: 2822

Hello There

I'm using TalkPCR 2.49 for two weeks already, I like
the application, but the message for registration is
very annoying, do you guys know the way to register or
remove that message?

I'm not seeing the way to register with them, website
does not have information, neither looks official
site.

Thanks

The UT-106 is a DSP based noise reduction system and is a worthwhile addition to the PRC1000, it works very well in my experience, put it in and try it, you will not be disappointed.

2828. using more then one antenna on the same coax

Yahoo group: PCR1000
Date: 2004-09-29 08:11:20 UTC
From: Robbins, Matty
Topic: 2828 Message: 2828

Hi All

I have a problem that I am sure one of you can solve

I have only one coax coming down from the roof (I live in an apartment house and was able to add only one feed into the house before construction ended.

How can I connect two different antenna (Have a dicone for VHF/UHF and want to add a long wire for HF) to one feed?

Thanks

Matty

2829. good SW readio

Matty I believe that the 1000 is a better radio than a R75. unfortunately not many radios new are very good under $600. a good used Drake R8 or R71A would fall into that category.

David

This is a very good question, I still no have one yet
for my PCR radio, I heard very good comments about it,
but I found software that can do the same for free, or
other very good cheaper than UT-106:

This is very great free DSP filter:

http://helios.wh2.tu-dresden.de/~bernd109/dsp/br_uni_filteng.html

There is more very good no free like this:

Chroma Sound:
http://www.barberdsp.com/

Now just evaluating and testing before make mi mind to
buy a real Hardware DSP UT-106

Here a big list of software, old, new, free, bad:

http://www.muenster.de/%7Ewelp/sb.htm#analyzer

Will be nice if one guy that has the real UT-106 run a
test between the Icom UT-106 and software like this.

Good Luck!

It depends, if your a hands on type - all you do is plug it in [to hook it up].
Its really easy to do if you know what your doing, can read & follow directions.
If you have no experience with electronics, you have fat fingers & don't like
messing with small parts, you might be better off having someone else do it.

2837. Re: UT-106

Yahoo group: PCR1000
Date: 2004-09-29 18:57:58 UTC
From: johnpq2001uk
Topic: 2774 Message: 2837

Hi,
Just to add my experiences on the UT-106 and DSP in general. Firstly, one dealer advised that the UT-106 DSP was rather 'first generation' and not really effective. However, I eventually bought one. Fitting it is easy - just get the ribbon cable the right way round. But, a snag - I found that a lot of spurious signals had appeared. Coincidently, I found a short review which mentioned this. It advised moving the board away from the antenna input by inverting it carefully and moving it to the opposite side. There is room - just - but be careful that the cables do not get detached. The original position is right above one of the regulators - and there is a fairly deep indentation in the board sleeve. The result - spurious clock signals reduced to reasonable levels... In use, it is very good, particularly in reducing noise from AM or SSB signals, it's not very useful on FM.

One area where I've found it very useful is in the Air Band spectrum for weak, noisy signals. It is nice to have it integated into the software - TalkPCR etc. I've also tryed many of the other Sound card based DSP programs. All are very reasonable - depends if you are happy to run a separate DSP program.

As far as external audio DSP boxes are concerned, the UT-106 has a similar performance to my old Timewave DSP box, but without the flexibility of filter and noise reduction selections. Now, ther are a couple of other options available - at a similar or slightly higher price. In the UK, BHI produce a number of external DSP units, from plain boards
to DSP combined with the loudspeaker - very good performance. My favourite is, however, the ADSP2 unit installed in my SGC 2020 HF transceiver. This has a truly remarkable performance in noise reduction, combined with selectable 'brickwall' filters. This unit is available as an internal board with or without AF power amp. Have a look at their web site. I do not think it would be easy to fit inside the PCR-1000, but could be built into an external speaker box.

Hope this is of use...

From: David
Topic: 2774 Message: 2838

thanks everybody for your help

2839. RE: [PCR1000] using more then one antenna on the same coax

Yahoo group: PCR1000
Date: 2004-09-29 22:14:14 UTC
From: Terry Griffiths (Pacom Regional Manager)
Topic: 2828 Message: 2839

You can obtain a Coax switch or relay that is operated by 12 Volts sent up the Coax, consult a local communications Technician to give you details of the parts required.

Cheers

Terry Griffiths

For Matty. For $600, you could pick up used Icom or Kenwood HF transceiver that covers 6meters. This would give you coverage from the basement up to about 60 MHZ. Ignore the transmitter part and enjoy one of the best receivers to be found. I personally use a Kenwood TS690 and it makes a really good SW receiver. There are some really good narrow band filters for these radios. I have seen both of the brands sell used for $600.

Subject: [PCR1000] good SW readio

Hi All
As I learned from you all the PCR1000 is not the best HF receiver in the world. I am starting to look for a dedicated HF receiver and was thinking about the IC R75 does anybody have and thoughts about this receiver or any other one that they think is a good one. I do not want to spend more the 600$

Thank
Matty

I find it way better than the DSP software found on the Web. I have both and and there is no comparison to the UT-106.

Scott,

Real simple..took me about 2 minutes.....thin multistrand cable with connector, and one or two other 'plug-ins..'.

Really makes a world of difference on the PCR1000 receiver - particularly in SSB mode.

73s,

Jeff

Hi
I have the Radiocom 4 and 5.1 both are very difficult to work with. The 5.1 will not work on Windows XP and the 4 only some times works on XP sometimes it goes into simulation mode for no apparent reason. When it does work it is very not user friendly and it is difficult to use. The manual is not worth anything either (does anybody have a better manual?)

Hello

If you are real radio amateur you will love RadioCom,
I'm using the version 4.5 without any problems on
Windows XP-Pro, the application is not that
complicated if you understand the basics of radio
transmissions, this application can decode, RTTY, CW,
FAX, SSTV and others, there is a lot of frequency
databases available to start receiving.

I'm thinking to upgrade to the latest version 5.2,
this version includes more features, like an excellent
DSP system

If you have not experience as Radio Amateur so
RadioCom is not the application you need.

Good Luck!

This one's probably long forgotten

I like Radio Manager for the user interface.

http://www.bensware.com/rmdownloads.htm

Its shareware and I don't know if the author is going to do any further updates (didn't work on my XP machine). It lacks in some features, but I really like the user interface because you can switch banks on and off without clicking through menus.

I like the way Radio Manager manages frequencies too. TalkPCR is still superior in my opinion if you use all of the radio's features but if you are looking for basic scanning without bandscope or audio recording etc, then RM might be fun to play with.

Just another option...

Hello all:

I have a Radiocom. 4.5 with my PCR1000 but no Works (no audio).

PCR100 works ok. With others software. Any help is welcome.

Thanks

Victor

Another software is RadioControl (http://www.radioctl.com/english). It has a Windows compliant user interface and is therefore easy to learn and operate. Some of its features are:

* Frontpanel for direct control of the radio (also supports IC-PCR1000's DTMF decoder)
* *Real* Database support for building your Frequency Database
* Memory channel management incl. a memory channel scanner
* Frequency Search with graphical spectrum
* comprehensive and understandable help file
* support for controling multiple radios at the same time

The Lite Edition only costs ~15 USD, so its really affordable.

Just another option.

Regards from Austria,
Ralf

2860. Favorite PCR software poll (spoiler included)

From: nt1g@comcast.net
Topic: 2860 Message: 2860

The group had a survey a year ago, asking the users what their favorite PCR software was. Not too much has changed since then, however I thought I'd ask if there in any interest in doing it again.
Also, please suggest any software not included on the list, since the votes get reset if you do any changes to the poll. (Like some wanted TPCR by version)
I'm going to limit the selections of software that CONTROLS the PCR, so programs like SkysweepPro will not be on the list. There's going to be minimum 1 week notification peroid before the voting begins (so that all the software can be included) and 1 week open poll time, unless anyone has a different time-frame idea. So...,
October 4 Request for suggestions and software
October 11 Polls open
October 18 Results available

Here are the results from the November 13, 2003 poll:

Choices Votes % 1 reply
Icom PCR-1000 Ver.2 6 16.22%

I downloaded Talkpcr and it looks like a better version of the
included "radio" that comes with the PCR1000. I was wondering though
if TalkPCR does the fancy "digital" stuff Bonitro does like FAX or
even morse code etc. ?

Thanks for all your great help.

Try MixW2 in conjunction with TalkPCR and your PCR1000 and you will find it will decode most of the modes, free trial for 14 days.

Cheers

Hello Martin

I saw this posting, I want to congratulate for your nice website.

I just started doing the same with my PCR-1000 getting some APT images on 137Mhz, but still have a lot of problems, could you tell me how you configure the WXSat, there is not manual nor information I read that I have to use an .ini file to recognize the radio, do you have it?

Are using UT-106 DSP or software DSP?

About the antenna, what anetnna are you using for this application?

Thanks for your feedback

Antonio

2869. cw / nothing but static

Yahoo group: PCR1000
Date: 2004-10-08 20:10:09 UTC
From: paulsurf1221
Topic: 2869 Message: 2869

Hi,

I was looking for some advice. I have been trying to listen to and decode morse code using talkpcr & mixw2. I have been trying frequencies (on CW mode)3.5Mhz, 7.00, 14, 14.2, and 28 Mhz. I am using the PCR1000 and a small antenna and I get nothing but static on these frequencies. If i scan a range around there sometimes i get a high pitched tone on different frequencies but nothing else.

Anyone have advice on how I can hear more than just static.

Thanks,

Paul.

2870. Help with Antenna for PCR-1000

I can only give you a superficial reaction (as problems often depend on your local situation, which I don't know), but first of all a small antenna (perhaps you are using the one supplied with the PCR1000?) is not much good, except for really local stations. You will need a good quality antenna (perhaps a long wire or a loop) to receive a decent signal (remember to use the attenuator button if you all of a sudden hear a lot of different signals at the same time, since the PCR1000's frontend can easily be overloaded - IMHO the only serious problem of the PRC1000).

The high pitched tones may be due to electronic divices used in the neighbourhood of your PCR1000 and/or your antenna, such as the monitor of your PC, a TV set. You may test this by turning off your monitor (and/or any other electronic devices), whilst hearing one of these high pitch tones.

The best solution would be -provided that your neighbours do not produce too much interference- to use a good antenna, connected to a coaxial cable at some distance from your PC and to make sure this coaxial cable be connected properly to your receiver.

Hope this information is -at least a bit- helpful to you....

Your advice is very helpful. Later I am going to try an antenna similar to the one you are suggesting. The antenna I am using now is a telescoping antenna connected directly to the back of the PCR1000.

Once you are certain that you do not have antenna or
radio problems, tune to 14.0475 and listen to ARRL's
code practice and bulletins. For more info go to
http://www.arrl.org/w1aw.html.

Dave,
Have a go at this one.
It's as simple as PVC pipe salt water a bolt and a handful of
washers.And its cheap.
Works like a charm and that pesky AC hum is nowhere to be seen. I've
become an addict, and have several of these made in various
diameters.Even works well indoors. cheers, Mal.

Dave,
Have a go at this one.
It's as simple as PVC pipe salt water a bolt and a handful of
washers.And its cheap.
Works like a charm and that pesky AC hum is nowhere to be seen. I've
become an addict, and have several of these made in various
diameters.Even works well indoors. cheers, Mal.

To TalkPCR: does nyone here know about the future ? The homepage
donsent say too much about it, and - as its running on windows -
sooner or later some problems with the OS will occur causing troubles.
Is the source for it available to do some further developement /
bugfixing ?

Best regards,

2882. PCR's getting kinda scarce

Yahoo group: PCR1000
Date: 2004-10-12 14:50:13 UTC
From: rocketradio2002
Topic: 2882 Message: 2882

I just bought a second PCR-1000 for a work project and was really surprised on how scarce the 1000 is getting on dealers shelves. As of Friday the 8th of October, Ham Radio Outlet has 1 left in their New Hampshire store and Burghardt's in South Dakota (not sure on spelling) had one left also at $374.95. Ebay continues to have quite a few used ones every week.

One thing that was mentioned to me by HRO is that only the US model is being discontinued and that the "full meal deal" version will continue to be available. Anybody else know anything further on this? I suspect the value of our little black boxes will continue to rise as the supply drys up.

George

Hello, I doubt the value of the PCR will continue to rise or even hold its value as it will also continue to go out of date! Within 10-15 years there will be nothing to listen to anyway, as it will all have gone digital, even the aeronautical stuff. Already the UK, who may I say lead the future on radio technology, has seen the police and other services go digital. The US will follow before you know it.
Regards,
Dave.

Man this is kinda one two punch for me lol...

You see I just got one this last week - $500 smacks, from HRO. Last they had on shelf here in Phoenix.

Now to double the punch - your absolutely right about everything going digital etc etc. In fact, even with the PCR1000 now, and the PCRTrunk (which I am still figuring out) I won't be able to trunk the new system they are using here in Phoenix (I think from what I am understanding).

Love controlling it from the pc etc, but am really contemplating now the true value of it.

K.

Topic: 2882 Message: 2885

I would like to take issue to some degree about that. Let me compare my little $300-$500 investment over time to my $10K - $20K investment for my automobile. How many of those autos do we expect to hold
their value for 10-15 years? How many other radios do we still consider "current technology" 10 - 15 years later? Just because I can see that somewhere down the road there is the possibility that there will be signals that this radio won't be capable of receiving, it does not mean that this radio becomes less valueable to me. That smacks of saying that the old DOS computers quit working the day Windows was released. There is obviously a point in time where everything loses it's utility as it was designed for, but I suspect that this radio still has many a useful day ahead of it. As for becoming scarce, only the market will bear out that answer. I still see PCR100's being sold, and they are much less usefull than the PCR1000, yet folks still buy them. They are even more scarce.
I will keep my "scarce" radio for a while, thank you very much. If someone feels their radio is not worth it's value, let me know and I'll gladly accept yours from you as a contribution to my "old clunker stockpile".

Thanks .....

From: Frankee
Topic: 2882 Message: 2886

Hi John,

I think you are perfectly right. I still have (and sometimes use for specific [CW] stations) my "19 set" (built in 1959). It does not receive many of the modern type of signals (thought I might feed the output into my PC for decoding, since the receiver has a great stability) and it only covers the range between 2 and 8 MHz, but it is still trustworthy and useful.

The PCR-1000 offers a lot more, and when fed into my PC's soundcard there is a host of signals that can be decoded. Last weekend I even succeeded in receiving DRM-signals (without any hardware changes!) with the new version of the DReaM software. The received signals were not very stable: the signals of weaker [i.e. less strong] stations just faded [read: popped] in and out, but the fact that even now, with software that has not yet been fully developed (at least I suppose), and just a few test transmissions, this can be done, means that the combination of the PCR-1000 and the appropriate software still has quite a future.

Frank,

I must admit to being puzzled in that you say a 19 set manf 1959. I thought they packed up in the late 40s because there was such a stockpile.
It is nice to know there are still some around. I know you could still find new ones in the 60s.

You might still be able to find an "old stock" model on some dealers' shelves somewhere.

As I reported here on 07/29/04, the existing stock on dealers' shelves is the last time we will see the "old" pricing. Current production units are about one hundred bucks higher in price.

Clint Bradford, K6LCS

John ,
I think you need to take a step backwards and read the posts before providing such an intellectual look on life.

Estimates are that in 10 - 15 years Digital will have well and truly taken over the radio waves. In fact to put a stronger point on it even HF Aeronautical transmissions from Shanwick and the like are considering changing to digital sooner, although it may not happen for a while yet due to system integration difficulties. Add to this all your police, ambulance and fire services and almost every public body also going digital well before 10 - 15 years and im afraid all your left with is Radio stations, if that rocks your boat then your in a fine position, but do bear in mind they too will go digital eventually.
Your explanation of how certain other radios are still very useful 10 - 15 years after their time is all good and well, but you must remember we are not talking about some new frequency step or a fancy read out or even great sensitivity, digital is an entirely different concept. My father was working on digital in the 70's before any of us guys even heard of it, so its well perfected and only a question of money before its everywhere. So certainly hold on to your PCR and enjoy it, but once again I can assure you, it wont hold its value, in fact it wont deserve to hold its value and in less than 20 years the world will be full of little black boxes propping up books. How much is a book end nowa days?

Regards,
Dave.

From: John Taylor
Topic: 2882 Message: 2890

Dave, you might be right, however, I think you completely missed the point. Not everyone is willing to go stick our head in the sand and cry "woe-is-me" because we know that change is a commin. Yes, as a professional in the communications industry, I am keenly aware of the changes digital is bringing to our world. These changes are welcomed by me as in most cases they are much more effiecient, but they are an ongoing process. Are you willing to forgo your house, your auto, and everything else because it is predicted that the Earth is going to blow up someday and they will be of no value then? I don't think so. Do you not understand how rediculous that sounds? Yes, things are going to be different in the future, and some of the things we enjoy today might not be there then. But, that is then and this is now. You repeatedly mention 10 - 15 years in your posts. Should we all just throw our PCR1000's, Icom-IC706's, R7000' etc. away because in the 10 - 15 years in the future, digital is going to make them useless? I don't think so. If that is your point of view, it is your privelidge, but I feel sorry for you and those around you that live in the world of doom and gloom due to "the future is comin" ....
Personally, I prefer to plan for the future now, and live in the today ... That is what this list is all about, people helping people with their radios of today ... those that wish to use their radios today, and maybe buy a new one in 10 - 15 years that will work on the modes available then .... My guess is that there are not that many our here that are worried that our PCR1000 that we have today will not be as usefull in 10 - 15 years .... What do you think? Dave, I respect your opinion as valid in that indeed in 10 -15 years digital modes will likely make this radio less valueable than it is today, but then, there is still a good market for antiques that don't even work at all. So before you totally declare these things worthless, please look at the whole picture around you. Mine still works today just fine, and according to your figures, should continue to do so for another 10 - 15 years.

John

As a generalisation your theme makes sense, but you have perhaps neglected that much transmission from other countries around the world could still use the pcr for many many decades.
Shifting a little off subject re book-ends, books seem to be a little alien to up and coming generations, it's all computers in schools. Remember the days of weighty old text books and a sliderule. That's how I was educated, and I still find a use for them, you just pick them up and read/use, no plugging in and booting up - magic.

John ,
I think you need to take a step backwards and read the posts before providing such an intellectual look on life.

Estimates are that in 10 - 15 years Digital will have well and truly taken over the radio waves. In fact to put a stronger point on it even HF Aeronautical transmissions from Shanwick and the like are considering changing to digital sooner, although it may not happen for a while yet due to system integration difficulties. Add to this all your police, ambulance and fire services and almost every public body also going digital well before 10 - 15 years and im afraid all your left with is Radio stations, if that rocks your boat then your in a fine position, but do bear in mind they too will go digital eventually.
Your explanation of how certain other radios are still very useful 10 - 15 years after their time is all good and well, but you must remember we are not talking about some new frequency step or a fancy read out or even great sensitivity, digital is an entirely different concept. My father was working on digital in the 70's before any of us guys even heard of it, so its well perfected and only a question of money before its everywhere. So certainly hold on to your PCR and enjoy it, but once again I can assure you, it wont hold its value, in fact it wont deserve to hold its value and in less than 20 years the world will be full of little black boxes propping up books. How much is a book end nowa days?

Regards,
Dave.

Subject: [PCR1000] Re: PCR's getting kinda scarce

I would like to take issue to some degree about that. Let me compare
my little $300-$500 investment over time to my $10K - $20K
investment for my automobile. How many of those autos do we expect
to hold
their value for 10-15 years? How many other radios do we still
consider "current technology" 10 - 15 years later? Just because I
can see that somewhere down the road there is the possibility that

there will be signals that this radio won't be capable of receiving, it does not mean that this radio becomes less valueable to me. That smacks of saying that the old DOS computers quit working the day Windows was released. There is obviously a point in time where everything loses it's utility as it was designed for, but I suspect that this radio still has many a useful day ahead of it. As for becoming scarce, only the market will bear out that answer. I still see PCR100's being sold, and they are much less usefull than the PCR1000, yet folks still buy them. They are even more scarce.
I will keep my "scarce" radio for a while, thank you very much. If someone feels their radio is not worth it's value, let me know and I'll gladly accept yours from you as a contribution to my "old clunker stockpile".

Thanks .....

From: D Brown
Topic: 2882 Message: 2892

Up until a few months ago I had an old 286 computer that I used to control one of my radios (PRO-2006 with Opto-board). The value of that computer was nothing to the person who gave it to me, but of great value for the use I found. I don't think you can really say what value the PCR-1000 may serve in the future. It may be more useful than anyone can imagine right now. What if there's a band of frequencies that becomes outlawed (like cellular did) in the future that the PCR will cover? What if someone finds a way to decode digital through a sound card, yet most radios have the band blocked? I think it's kind of narrow thinking for now, but then you may be right.

We won't know until we cross that bridge, but for now, I am just going to enjoy what I have.

From: John Parks
Topic: 2882 Message: 2893

umm.. I think some people need a reality check, lets
do some math.. lets ASSUME the price of a new PCR-1000
@ $450USD..which is definitely high,I bought mine for
345$ from HRO about a year ago,lets ALSO assume that
your radio is outdated in ohhh....lets say 3 yrs...
OOPS..all the agencies in your area switched to
ASTRO/OPENSKY.. or some other such nonsense..so you
now have a "useless" (to YOU anyway) PCR1k.. lets do
some math.
36 months = 3 yrs... so lets divide the purchase price
by the number of months..which will give you a cost
per month, 450$ initial purchase price divided by 36
months...gives you $12.50USD,PER MONTH,on an
OVERPRICED($450USD) pcr1k, and this is assuming ONLY
that you use your PCR1k for local PD/FD etc.. which is
a REAL WASTE! the pcr1k is so much more.. so .. is it
worth $12.50USD per month to use such a great tool?
IMHO ..damn skippy.... ..just my .02 US cents ,lol so
many negative things,yes things get old/outdated..but
once you use some logic and do a cost analysis.. it
makes sense..the PCR1k is a GREAT buy, EVEN if it only
lasts three years... there are people that paid 500$
when it first came out and still have them to this
day, which is what ? 8 yrs? dare I do the math on THAT
one? ..

Now that's an interesting point. A couple of days I finally succeeded in listening to DRM test transmissions with my (unmodified) PCR-1000, with the (free) DReaM software (latest version). DRM transmissions are causing a lot of interference on and around their frequencies, but on the other hand it is quite strange to be able to listen to a station on 19 meters transmitting at some 2000 kms from my QTH, with an audio quality that is comparable to that of a local VHF-station. Even Stereo is possible (sofar I only heard stereo -very impressive!- from the Deutsche Welle at a few 100 kms from my QTH.
As you see, it would seem that the PCR-1000 is well prepared for future developments :-)))

Where did you get the free DReaM software from

Hi Robby,

You can find a compiled version at the following URL:

http://home.t-online.de/home/sat-service/sat/DRM/DRM.htm

You can also download it at the Sourceforge site, but that version still needs compiling, and I don't know if you are very much into that (I am not, certainly).

The DReaM-software also includes an hour-by-hour list of the available test transmissions. So far the program content is not really exciting, but who knows what will be available in the future. The only really interesting (content-wise) broadcaster is DW (Deutsche Welle), which offers much music (both rock, jazz and classical).

Enjoy!

Frank

P.S.: There is a DRM mailing list among the Yahoo-groups (not very active of late, I am afraid). If you should have any questions, you may try there (or you may mail me - off-list)

John with all due respect and without getting into a slanging match, I think it is your good self who is missing the point.
I have no intention of throwing out my PCR or any of my other radios for that matter, neither do I predict or worry about future occurrences in the communications industry, of which I might add I spent 4 years at University to become a part of. If you take care to read the original post, it made a comment regarding the value in monetary terms of the PCR and how the value may rise, or hold due to the lack of PCR's on shop shelves.

My response with out intentionally attempting to sound doomish was to point out that the PCR will in fact become basically useless in 10 - 15 years and therefore without doubt shall become less valuable and not increase or hold as the author of the post suggested it might. I of course realise all objects have a personal sentimental value to their owners, but to compare a house to a radio as you have done is simply ridiculas, if your house is going to become redundant in 10 years, I would seriously think of moving, where do you live, on the edge of a receding cliff? Further more, I doubt if in 20 years we will see much of a market for antique PCR1000's, of course I could be wrong, maybe the world will go PCR1000 mad in 20 years as everyone realises their value as a bookend.

I do not know of any radio that has maintained its value after it has been bought. The second hand value of most things in life decrease as I'm sure you are aware. As for comparing the value of a radio to a car, really, the PCR may well be a very good radio, but it most certainly is not a classic Ferrari, more a 1995 Mercedes.

This is not to say everyone shouldn't enjoy the radio while it is perfectly functional and in fact I didn't once suggest anyone should go into the garden and throw their PCR in the bin today. That was your suggestion and I would appreciate if you didn't try to put words into my mouth or my argument as the case may be. I also do not need a lecture as to the meaning of a Radio news group. I like everyone else belong and deserve to be part of this group because of our interest in radio communications and we all just happen to use a PCR1000, your attempt to explain "The Meaning of Life" is most certainly not welcome by me. Please do not attempt to patronise me with your physiologically objective literature. As you so rightly put it, this is a list by people with radios for radios so leave the physiological superiority attitude at your desk. You are obviously entitled to your opinion, but I think you are barking up the wrong tree. Try to understand what others "across" the water are writing before you jump in in with both feet first.

Kind regards,

Dave.

Subject: [PCR1000] Re: PCR's getting kinda scarce

Dave, you might be right, however, I think you completely missed the point. Not everyone is willing to go stick our head in the sand and cry "woe-is-me" because we know that change is a commin. Yes, as a professional in the communications industry, I am keenly aware of the changes digital is bringing to our world. These changes are welcomed by me as in most cases they are much more effiecient, but they are an ongoing process. Are you willing to forgo your house, your auto, and everything else because it is predicted that the Earth is going to blow up someday and they will be of no value then? I don't think so. Do you not understand how rediculous that sounds? Yes, things are going to be different in the future, and some of the things we enjoy today might not be there then. But, that is then and this is now. You repeatedly mention 10 - 15 years in your posts. Should we all just throw our PCR1000's, Icom-IC706's, R7000' etc. away because in the 10 - 15 years in the future, digital is going to make them useless? I don't think so. If that is your point of view, it is your privelidge, but I feel sorry for you and those around you that live in the world of doom and gloom due to "the future is comin" ....
Personally, I prefer to plan for the future now, and live in the today ... That is what this list is all about, people helping people with their radios of today ... those that wish to use their radios today, and maybe buy a new one in 10 - 15 years that will work on the modes available then .... My guess is that there are not that many our here that are worried that our PCR1000 that we have today will not be as usefull in 10 - 15 years .... What do you think? Dave, I respect your opinion as valid in that indeed in 10 -15 years digital modes will likely make this radio less valueable than it is today, but then, there is still a good market for antiques that don't even work at all. So before you totally declare these things worthless, please look at the whole picture around you. Mine still works today just fine, and according to your figures, should continue to do so for another 10 - 15 years.

John

In fact to put a stronger point on it even HF Aeronautical transmissions from Shanwick and the like are considering changing to digital sooner, although it may not happen for a while yet due to system integration difficulties. Add to this all your police, ambulance and fire services and almost every public body also going digital well before 10 - 15 years and im afraid all your left with is Radio stations, if that rocks your boat then your in a fine position, but do bear in mind they too will go digital eventually.

> Your explanation of how certain other radios are still very useful
10 - 15 years after their time is all good and well, but you must
remember we are not talking about some new frequency step or a fancy
read out or even great sensitivity, digital is an entirely different
concept. My father was working on digital in the 70's before any of
us guys even heard of it, so its well perfected and only a question
of money before its everywhere. So certainly hold on to your PCR and
enjoy it, but once again I can assure you, it wont hold its value,
in fact it wont deserve to hold its value and in less than 20 years
the world will be full of little black boxes propping up books. How
much is a book end nowa days?

Chris unfortunatly my Son doesnt carry a laptop to and from school just yet. Books are a extremely important method of teaching in the UK and the computer most certainly has not replaced them at the moment!

As a generalisation your theme makes sense, but you have perhaps neglected that much transmission from other countries around the world could still use the pcr for many many decades.
Shifting a little off subject re book-ends, books seem to be a little alien to up and coming generations, it's all computers in schools. Remember the days of weighty old text books and a sliderule. That's how I was educated, and I still find a use for them, you just pick them up and read/use, no plugging in and booting up - magic.

I would like to take issue to some degree about that. Let me compare my little $300-$500 investment over time to my $10K - $20K investment for my automobile. How many of those autos do we expect to hold
their value for 10-15 years? How many other radios do we still consider "current technology" 10 - 15 years later? Just because I can see that somewhere down the road there is the possibility that there will be signals that this radio won't be capable of receiving, it does not mean that this radio becomes less valueable to me. That smacks of saying that the old DOS computers quit working the day Windows was released. There is obviously a point in time where everything loses it's utility as it was designed for, but I suspect that this radio still has many a useful day ahead of it. As for becoming scarce, only the market will bear out that answer. I still see PCR100's being sold, and they are much less usefull than the PCR1000, yet folks still buy them. They are even more scarce.
I will keep my "scarce" radio for a while, thank you very much. If someone feels their radio is not worth it's value, let me know and I'll gladly accept yours from you as a contribution to my "old clunker stockpile".

Thanks .....

Subject: Re: [PCR1000] Re: PCR's getting kinda scarce

umm.. I think some people need a reality check, lets
do some math.. lets ASSUME the price of a new PCR-1000
@ $450USD..which is definitely high,I bought mine for
345$ from HRO about a year ago,lets ALSO assume that
your radio is outdated in ohhh....lets say 3 yrs...
OOPS..all the agencies in your area switched to
ASTRO/OPENSKY.. or some other such nonsense..so you
now have a "useless" (to YOU anyway) PCR1k.. lets do
some math.
36 months = 3 yrs... so lets divide the purchase price
by the number of months..which will give you a cost
per month, 450$ initial purchase price divided by 36
months...gives you $12.50USD,PER MONTH,on an
OVERPRICED($450USD) pcr1k, and this is assuming ONLY
that you use your PCR1k for local PD/FD etc.. which is
a REAL WASTE! the pcr1k is so much more.. so .. is it
worth $12.50USD per month to use such a great tool?
IMHO ..damn skippy.... ..just my .02 US cents ,lol so
many negative things,yes things get old/outdated..but
once you use some logic and do a cost analysis.. it
makes sense..the PCR1k is a GREAT buy, EVEN if it only
lasts three years... there are people that paid 500$
when it first came out and still have them to this
day, which is what ? 8 yrs? dare I do the math on THAT
one? ..

Topic: 2882 Message: 2901

Fine Dave! You wish to make your point by trying to make abstract concepts and analogies become literal statements. It is obviously not your intention to listen to any of the posts pointing out opinions that might differ from your own. So be it. If you feel you MUST have the last word, go for it. You have so eloquently made everyone elses point for them with your own words. You have clearly pointed out that you do not intend to entertain any opposing point of view. As D Brown pointed out, you seem to be thinking quite narrowly. I rest my case .... Again, if you wish to have the last word, by all means I do not want to get into "slanging" either. . . . .

Regards,

John
--- In PCR1000@yahoogroups.com, "morphieusmaximus" <morphieusmaximus@b...> wrote:
> John with all due respect and without getting into a slanging match, I think it is your good self who is missing the point.
> I have no intention of throwing out my PCR or any of my other radios for that matter, neither do I predict or worry about future occurrences in the communications industry, of which I might add I spent 4 years at University to become a part of. If you take care to read the original post, it made a comment regarding the value in monetary terms of the PCR and how the value may rise, or hold due to the lack of PCR's on shop shelves.
>
> My response with out intentionally attempting to sound doomish was to point out that the PCR will in fact become basically useless in 10 - 15 years and therefore without doubt shall become less valuable and not increase or hold as the author of the post suggested it might. I of course realise all objects have a personal sentimental value to their owners, but to compare a house to a radio as you have done is simply ridiculas, if your house is going to become redundant in 10 years, I would seriously think of moving, where do you live, on the edge of a receding cliff? Further more, I doubt if in 20 years we will see much of a market for antique PCR1000's, of course I could be wrong, maybe the world will go PCR1000 mad in 20 years as everyone realises their value as a bookend.
>
> I do not know of any radio that has maintained its value after it has been bought. The second hand value of most things in life decrease as I'm sure you are aware. As for comparing the value of a radio to a car, really, the PCR may well be a very good radio, but it most certainly is not a classic Ferrari, more a 1995 Mercedes.

>
> This is not to say everyone shouldn't enjoy the radio while it is perfectly functional and in fact I didn't once suggest anyone should go into the garden and throw their PCR in the bin today. That was your suggestion and I would appreciate if you didn't try to put words into my mouth or my argument as the case may be. I also do not need a lecture as to the meaning of a Radio news group. I like everyone else belong and deserve to be part of this group because of our interest in radio communications and we all just happen to use a PCR1000, your attempt to explain "The Meaning of Life" is most certainly not welcome by me. Please do not attempt to patronise me with your physiologically objective literature. As you so rightly put it, this is a list by people with radios for radios so leave the physiological superiority attitude at your desk. You are obviously entitled to your opinion, but I think you are barking up the wrong tree. Try to understand what others "across" the water are writing before you jump in in with both feet first.

2902. Re: [PCR1000] Re: PCR's getting kinda scarce

Yahoo group: PCR1000
Date: 2004-10-14 17:14:53 UTC
From: Idris Alooma
Topic: 2882 Message: 2902

Hello,

I'm brand spanking new here. However I have a question just the same. I was all set to go out and obtain a Ten-Tec 340. The 2003 WRTH rated it the best receiver on the market anywhere in the galaxy.

Then as I was looking through my 2003 WRTH, I saw this story where the writer was lamenting the fact that development of PC radio had stopped. I had never heard of PC radio so I Googled further. The more I read, the more interested I became.

I first read about the

Ten-Tec Rd-320 Then I read about the ICOM PCR-1000 and now I'm reading about the Winradio 1550E and their other products.

My questions are as follows:

(1) Why should I pay thousands of dollars for a real piece of hardware like the Ten-Tec 340 when I can buy a PC radio and hook it up to my Dell XPS T-600 which cost me over $6,000 when I bought it new in 1999?

(2) How close in performance are these pc radio to the real professional desktops?

(3) What am I losing by using a PC radio?

(4) What is wrong with listening to SW from the websites of various countries? The sound is perfect?

What is the most intelligent way to go in regards to listening to news and commentary around the world? I want to hear what other people have to say and not just the incredibly biased, deceptive, immoral, unethical, Satanic, slanted viewpoints of England, Australia, New Zealand, and America

Thank you very much for taking the time to answer these questions that have probably been answered a few thousand times on this forum?

Live Long and Prosper

Information at the link below will totally rip you off!

Sir Morphieus,

I don't like this post at all. This sounds like it has been typed by someone who has some high level thinking capabilities. You have succeeded in making John sound like a total nincompoop without using one curse word, or violent language.

This is not permissible in America. Everyone must learn to speak and think like our Godlike leaders George, president SELECTED, Bush, Donnie Rumsfeld, Paul Wolfowitz, Condor Rice, or Dickie Cheney.

You have shown an incredible degree of intelligence in your grammar and writings. We thought that we had successfully stamped out all of that in this country. You do not fit in the process of the dumbing down of America.

Beware homeland security is watching you. :-))

John with all due respect and without getting into a slanging match, I think it is your good self who is missing the point.
I have no intention of throwing out my PCR or any of my other radios for that matter, neither do I predict or worry about future occurrences in the communications industry, of which I might add I spent 4 years at University to become a part of. If you take care to read the original post, it made a comment regarding the value in monetary terms of the PCR and how the value may rise, or hold due to the lack of PCR's on shop shelves.

My response with out intentionally attempting to sound doomish was to point out that the PCR will in fact become basically useless in 10 - 15 years and therefore without doubt shall become less valuable and not increase or hold as the author of the post suggested it might. I of course realise all objects have a personal sentimental value to their owners, but to compare a house to a radio as you have done is simply ridiculas, if your house is going to become redundant in 10 years, I would seriously think of moving, where do you live, on the edge of a receding cliff? Further more, I doubt if in 20 years we will see much of a market for antique PCR1000's, of course I could be wrong, maybe the world will go PCR1000 mad in 20 years as everyone realises their value as a bookend.
Kind regards,

Dave.

As a generalisation your theme makes sense, but you have perhaps neglected that much transmission from other countries around the world could still use the pcr for many many decades.
Shifting a little off subject re book-ends, books seem to be a little alien to up and coming generations, it's all computers in schools. Remember the days of weighty old text books and a sliderule. That's how I was educated, and I still find a use for them, you just pick them up and read/use, no plugging in and booting up - magic.

2908. Re: [PCR1000] Re: PCR's getting kinda scarce

Yahoo group: PCR1000
Date: 2004-10-14 18:59:30 UTC
From: DAVID BODELL
Topic: 2882 Message: 2908

Please John, By challenging me to have the "last word" you assume that you should have it. Please act your age, I have already made it clear I do not wish a "slanging match" as i quite literally think we are both mature enough to avoid such childish behaviour.
I am quite prepared to listen to other points of view, because however one person may choose to disagree with my post, does not make them right and I wrong , Nor of course does it necessarily make me right.
Mr D Brown is perfectly entitled to his opinion, as are you and I. However you seem to be missing the whole point of the original post and obviously lack an understanding of my English literature. Some of the points you raised were perfectly legitimate points, like the usefulness of the PCR NOW, that however is in the wrong time frame with what I actually wrote. My main disagreement with you, is the fact that you choose to add words to my comments, you are inserting assumptions that i did not make. I do not particularly enjoy arrogance but in my opinion you display it in abundance.
As was stated before by I believe both yourself and I, this group is for radio enthusiasts, it is not to attempt to out wit or be more intellectual than other members. Without attempting to insult Americans and apologise if anyone thinks I am, because It is not intended as such, you really should remember this group has more nationalities in it than just American and the domineering manner in which people such as yourself reply to others really doesn't wash with us Europeans. Now I don't mind if you reply or not, for the simple reason my argument will not be silenced because you think it should be, it will be silenced when I choose it to be, thats the joy of living in Great Britain, i too have freedom of speech. Never the less I do not wish this to drag on and be amusement for other members, so I shall email you privately if you wish to continue our discussion.

Kind Regards,
Dave.
John Taylor <ke5ham@...> wrote:

Fine Dave! You wish to make your point by trying to make abstract
concepts and analogies become literal statements. It is obviously
not your intention to listen to any of the posts pointing out
opinions that might differ from your own. So be it. If you feel you
MUST have the last word, go for it. You have so eloquently made
everyone elses point for them with your own words. You have clearly
pointed out that you do not intend to entertain any opposing point
of view. As D Brown pointed out, you seem to be thinking quite
narrowly. I rest my case .... Again, if you wish to have the last
word, by all means I do not want to get into "slanging"
either. . . . .

Regards,

John
--- In PCR1000@yahoogroups.com, "morphieusmaximus"
<morphieusmaximus@b...> wrote:
> John with all due respect and without getting into a slanging

match, I think it is your good self who is missing the point.
> I have no intention of throwing out my PCR or any of my other radios for that matter, neither do I predict or worry about future occurrences in the communications industry, of which I might add I spent 4 years at University to become a part of. If you take care to read the original post, it made a comment regarding the value in monetary terms of the PCR and how the value may rise, or hold due to the lack of PCR's on shop shelves.
>
> My response with out intentionally attempting to sound doomish was to point out that the PCR will in fact become basically useless in 10 - 15 years and therefore without doubt shall become less valuable and not increase or hold as the author of the post suggested it might. I of course realise all objects have a personal sentimental value to their owners, but to compare a house to a radio as you have done is simply ridiculas, if your house is going to become redundant in 10 years, I would seriously think of moving, where do you live, on the edge of a receding cliff? Further more, I doubt if in 20 years we will see much of a market for antique PCR1000's, of course I could be wrong, maybe the world will go PCR1000 mad in 20 years as everyone realises their value as a bookend.
>
> I do not know of any radio that has maintained its value after it has been bought. The second hand value of most things in life decrease as I'm sure you are aware. As for comparing the value of a radio to a car, really, the PCR may well be a very good radio, but it most certainly is not a classic Ferrari, more a 1995 Mercedes.
>
> This is not to say everyone shouldn't enjoy the radio while it is perfectly functional and in fact I didn't once suggest anyone should go into the garden and throw their PCR in the bin today. That was your suggestion and I would appreciate if you didn't try to put words into my mouth or my argument as the case may be. I also do not need a lecture as to the meaning of a Radio news group. I like everyone else belong and deserve to be part of this group because of our interest in radio communications and we all just happen to use a PCR1000, your attempt to explain "The Meaning of Life" is most certainly not welcome by me. Please do not attempt to patronise me with your physiologically objective literature. As you so rightly put it, this is a list by people with radios for radios so leave the physiological superiority attitude at your desk. You are obviously entitled to your opinion, but I think you are barking up the wrong tree. Try to understand what others "across" the water are writing before you jump in in with both feet first.

I use my PCR1000 for Radio Astronomy. Unless there is a cataclysmic event looming that we are currently unaware of, I cannot see my receiver losing its usefulness or value in the foreseeable future. There is and will be a good deal to listen to. At $US345 it represents a significant saving on my Icom R8500's. Even my homebrew RA receivers cost more to build.
-Mal

Sorry if this does/or has upset, but, I keep seeing media coverage of the educational (and political) establishments talking about getting more computers for the children, accompanied by footage of rooms full of PCs. Books seem a little thin on the ground.
(A youngster actually carrying a laptop to and from school had not actually entered my mind.)
This appears to be reinforced by the few parents I know, and one teacher, telling me there is no money for books. My observation re that, was you can get quite a few books for the price of a PC, even these days.

chris jc

Apart from the fact that this discussion is becoming quite OT, I don't see an imminent take-over by PC's at schools. My 15-year old daughter indeed uses her PC for studying (e.g. learning vocabularies and preparing essays), but she has to carry between 10 and 20 lbs (5 - 10 kgs) weight of books every day.
As for me (but of course at my age -56- I don't really count anymore) I still prefer paper dictionaries/encyclopedias for my work (translating) and there is nothing that beats reading a real paper book. The internet is extrremely useful for getting quick access to information from all over the world, but I still think it is a drag when I have to read large texts on-screen.

Just my 2 cents' worth...

Frank

2914. Usefulness of the PCR1000

Yahoo group: PCR1000
Date: 2004-10-15 04:43:20 UTC
From: valenfor
Topic: 2914 Message: 2914

OK - now that we have thuroughly hashed the monetary and capitolistic values of this item. I had made the point earlier on that I had just purchased on of these from HRO for quite the steeper price here in Phoenix. Almost made me want to take it back and find one for the $350 and take the xtra and put it into something else. However to echo someone saying 'they won't make US models anymore' that is also why I was told the price was higher now (new in box retail).

I have had only a week of playing with the device so far, and I am a noob to the scanner and receiver area. I have had lots of analog and digital experience however my last 10 years have been in PC's, software, microcontroller etc. So I do feel I have a good base.

So far I have been doing the limited scanning of the base police channels here in Phoenix. The thoughts of what can be done though with it is what really has me stoked. Unless I am misunderstanding something someone pointed out earlier made me go hummm... 'when someone figures out how to decode the digital signal with thier sound card'....

Well dang! I write software - not a DSP person YET but that has a lot of pretty unlimited possibilities when I think about it now. The 'packet out' line is really for a better name a discriminator level output correct? Before any filtering etc? Hmmmm - seems like that could be fed into all kinds of devices in the PC, including a nice A/D converter. Heck, anyone read the book 'The Art of Desception'? It has a great short story of someone who aquired the technical knowledge of the encryption with the help of the company who built it. Not that I would advocate such actions as those described, but someone will figure it out in time.

My biggest concern a bit ago was the ability to be able to do trunking. I haven't been able to get TrunckPCR working the way I believe it should. And though I see a ton of messages saying how good it is on his site, most of them also finish with 'Although I haven't actually trunked anything yet'.

Oh - and as for PC's and Books... I used to buy books. In a rare case that I can't find the information I need from the net, then I still do. Google is a friend of mine, and serves me quite well. The only book I think I will buy this next year is probably just a study guide so I can work on my amatuer radio license this next year. Otherwise - just dig and write mails to folks who are in the know.

In closing - after the previous thread I have changed my mind. So to help brainstorm we got Radio Astronomy, basic scanning, what else do

you use your PCR for?

K.

I have been using mine for DRM reception Digital Radio Mondale is the
new standard for Digital broadcasting on HF. I have added a 12 khz IF
out to it

well.. lets see where to start....

Paging decoder(pocsag,golay,flex)
Trunked system control channel monitor(MPT1327,
motorola Type I/II/IIi)
Mobile Data Terminal decoding (MDC4800,RD-LAP)
Weather satellite image decoder(WEFAX,WXSAT)
Slow Scan Television (SSTV)
Audio DSP filter
ANI Decoding (DTMF,ZVEI,MDC1200,CCIR,MODAT)
Packet data (APRS,AX-25)

.....scanner? you mean this thing can scan? lol..
these are just a FEW of the things I use MY PCR-1000
for...use your imagination.... and oh yeah... I listen
to my local FM radio station :-p

I've been using mine for basic scanning and FM/AM/SW
listening as well.

What Apps are you using to decode Paging and MDTs?
I used to do that back in the day, I tried using MDT
Monitor awhile back and it didn't seem to work. Also
tried Poc32, nothing there either.

I've always enjoyed monitoring what they tell you
you're not supposed to :)

Oh, and do you need the data-slicer for these apps?

Thanks

I use PDW 1.11E for flex, POC32 for pocsag, POC32 is
the most reliable pocsag decoding program I've ever
used.. PDW has a tendency to spit out gibberish,but is
the only readily available FLEX decoder,that DOESNT
require a "slicer", I use my soundcard. as for MDC's,
I use MDT monitor for windows, as well as proprietary
software, namely cerulean packet cluster, but that
requires a little bit more hardware ;) ...

just remember, in the USA, pursuant to the ECPA (
electronics communications privacy act) as amended in
1994 (?) it is illegal to purposefully recieve and
decode mobile data terminals and pagers..unless you
have permission from the sender or the intended
recipient.... not that you'll get caught,lol....but be
warned...dont be showing off to your local police
officer about how you can read his
pages....goober:-p....

It's a signal before squelch but are filtered with, at least, a capacitor that cuts off high frequencies. People have been known to get into trouble using the packet out signal for decoding as it is not clean enough.

Usually the encryption technology are widely known by many people and also well documented. But to be able to decrypt anything you'll need the encryption keys. And thoose are not even known by the users and only the administrator person has them available while entering them into the system. They are kept in a safe and if they need to be distributed to other locations it has to be done accompanied by security guards. (that keep the codes in their mouths, ready to be swallowed, I imagine)

Ubbe.

2927. Re: HAM-RADIO DELUXE

Yahoo group: PCR1000
Date: 2004-10-17 01:17:52 UTC
From: pencasptpt
Topic: 2925 Message: 2927

Hi,
I know I had read before but i had hope somebody could managed it...
I wonder how the people who made the other software that works fine
could get or discovered the full commands and the Simon's team
couldn't?

I hope everything works just fine in the near future because PCR-
1000 is a good receiver and HamRadio Deluxe is a good software...!

You are right, the software is great, the radio as
well, unfortunatelly developer is not supporting it.

There is a lot of software available for the PCR-1000,
for radio amateur there is a very good software called
ShortWave

http://www.shortwavelog.com/default-english.html

Good luck!

Antonio

From: Harry White
Topic: 2935 Message: 2935

Friends,
Is anyone using the BeaconSee HF beacon monitoring software with the Icom PCR1000? I can't get it to work without the "radio address" that the software uses to get at the radio. The PCR1K is not listed as a supported radio but there are notes around the net stating that it will work with most radios if you have said address.
Kind regards from rainy NW CT,
Harry

2938. TalkPCR and Icom PCR-1000

Yahoo group: PCR1000
Date: 2004-10-21 13:13:17 UTC
From: Allan Copland
Topic: 2938 Message: 2938

Hi,

For anyone who is trying and failing to use TalkPcr with the PCR-1000, here's a tip. Try a different serial lead.

The one that came with my PCR-1000 works fine with the ICOM software yet fails every time when I try to use TalkPCR.

A continuity test revealed no problems so I'm at a loss as to why the ICOM lead doesn't work.

The only downside of using a cheap serial cable is that you will pick up RFI from the PC. The sure is to fit snap-on ferrite chokes at each end of the cable.

Be sure to use a proper screened serial cable, or better still, make up one yourself.

I have to say that I rate TalkPcr as the best thing since sliced bread.

I have been caught with a similar problem using the lead that comes with a UPS for a PC, I bought a regular serial lead and it worked OK.

I presumed that some of the leads do not have all the pins connected , if you have problems try another lead, also have been using TalkPCR for some while and it is excellent.

Cheers

I have used TalkPCR for 4-5 years now! I have always thanked Pete for making it available. In fact - today - after 4-5 years my PCR1000 quit behaving normally. I remembered the EEPROM read I did long ago - and in TalkPcr - I did a restore on the EEPROM and the radio is top notch again! I just joined this group - and am now 99% a Mac user - but keep one PC running just for TalkPcr and the PCR1000. I have never been able to find a Mac OSX program to control the radio. So excuse me it this is an often asked question - but I would appreciate if anyone could let me know if one exists.

John!

Thanks! I ordered Virtual PC back in March - but
I am running the Dual 2Gig G5 - and Version 6 VPC
did not run on the G5 :(Anyhow - yesterday - I finally
received VPC7 - seems to run great (about 3 times
faster than Windows XP Pro on my 900 Mhz Pentium box!)

TalkPCR runs fine - in demo mode - I will bring
the radio over tomorrow! I have to find the USB/Serial
adapter cable I bought last March!?

Thanks again!

2944. Hey

Yahoo group: PCR1000
Date: 2004-10-29 01:21:45 UTC
From: Mike
Topic: 2003 Message: 2944

Hi
I am very new to this group. I have had scanners in the past but now I am looking at what the PCR1000 can do. I don't have a radio licence but enjoy listening.
I was wondering if anyone could point me in the right direction. When I try to read about this receiver it gives you all the specs. But for a guy like me it does not mean much. What I would like to know is, what can I listen to? Can you get trunk system, and can you get any digital stuff like police?
Also I modified a scanner before to widen the bandwidth to pick up the NOAA satellites. Will this receiver do that?

Any info would be great.
Thanks
Mike

Hi Mike,

I have no experience whatsoever with trunk listening (never been much of a scanner enthousiast), but I know there is software that should handle it. As for bandwidth: the PCR-1000 offers bandwidth of 2, 6, 15 (which I use for DRM-listening on my UNmodified PCR-1000), 59 and 230 kHz, so I suppose one of them should be fit for your NOAA-"listening"...

In the 4 years I have been using my PCR-1000, I have found it a wonderful receiver, with only two (sort of correctable) flaws:
1. strong antenna signals cause problems, but in most cases the built-in attenuator is sufficient to get around that. In serious cases you may need to use a preselector
2. I would have liked an extra smaller bandwidth (500 or even better 200 Hz) for CW-reception. I get around that with the shareware program SR5 (it will be free as of January next, though it is very cheap already, and I think the maker deserves everything users have paid sofar - Yes, I know I am getting OT).
Anyway, apart from that I am sure you will find the PCR-1000 one of the best things your money can buy (unless you succeed in buying a DR-7 or similar for a couple of tenners on eBay e.g.)...

Good luck,
Frank

For navtex on 518 kHz I would think that the discone would not be a good antenna of choice.
Pay attention to the display in the upper right hand corner of the screen. If there is a navtex broadcast then it should show a cross if it is all random well your just showing nothing but trash.
Navtex broadcasts are like hf weather fax broadcast the have sked's to go by. For navtex messages I just barely get by with a 100 foot outdoor diapole.
A loop antenna would be an antenna of choice.

Glenn

From: Mike
Topic: 2953 Message: 2953

I am new to this group. But I am looking for some info.
I have had scanners in the past but I don't have a radio license.
I am trying to find out what I can do with this receiver if I get
one.
I am trying to find out where I can get some info on all these terms.
I want to learn how to decode all these tones I hear on my scanner.
SSTV, NOAA, Packet...I'm not sure what all is out there to check for.
I was wondering what you all do out here. What is it you are
listening to are trying to decode..

Any info you all can give me would be great.
I'm not sure if the PCR1000 is what I really need for what I am
wanting to do, but thats what I am here to try and fing out.

What is the Digital board for to?

Again. Any info would be great
Thanks
Mike

2954. NOAA APT Reception by PCR-1000

Yahoo group: PCR1000
Date: 2004-11-03 10:03:10 UTC
From: linuska2000
Topic: 2954 Message: 2954

Hallo,
I have a problem in regard to the reception of APT of NOAA satellites by Icom PCR1000.

I receive the APT of NOAA satellites (137.XX MHz) using my 30-years old analog East-German "RFT" selective microvoltmeter without problems. I use a discone antenna (I know that it is not very suitable for that kind of reception, but for the first experiments I think it is sufficient). The signal is usually strong and clear when the satellite is high enough and I can hear the typical sound of APT transmission.

Several weeks ago I have bought a PCR-1000 receiver. I expected that with this radio I will be able to receive the pictures from NOAA. However, I was very disappointed when I tried to tune NOAA satellite on this radio. I heard almost nothing, even when the signal on RFT receiver was very strong. I have tried all available banwidths and modulations without success. Only in USB I have heard a very, very weak signal, which slowly changed with Doppler-shift.
Otherwise the sensitivity of my PCR-1000 is OK, because stations on airband (135 MHz) and 2m amateur band (145 MHz) are well audible.

On the internet I have found a lot of good references regarding to APT reception with PCR-1000.

So, I am helpless, where can be the problem.

Peter Tesar.

Hi,
I have problems with APT reception using PCR1000 too (see message 2954). I don't know why, butr signals I receive by PCR-1000 are very weak, although at the same time the signal received by other, 30-years old, quite insensitive radio is very strong (with the same antenna).
Can somebody help me?
Peter Tesar.

I'm using a PCR-1000 without an preamplifier all the time to receive WX sats, and the PCR1000 is very good at this.

Setup:
Adjust the volume to match your soundcard.
NFM
50 kHz bandwith
Squelch OFF
Muting OFF

Hope this helps.
Martin

2958. trunk tracking

Yahoo group: PCR1000
Date: 2004-11-05 14:44:08 UTC
From: Mike
Topic: 2958 Message: 2958

I'm thinking of purchasing a 1000. I'm trying to get as much info as
I can first.
Is it possible to do trunk tracking?

What are others listening to out there, and what are you decoding?
I have decoded the NOAA stuff before, but know nothing about anything
else thats out there, like sstv, packet....
Where can someone go to read up on all this stuff?

I'm in Toronto Canada. I'm looking for freq lists too.

As you can tell I am new to this, but I'm very interested to learn
more about it.

Any info would be great

Thanks Mike

Mike,

There is a program called TrunkPCR that will do what you are looking for.
Just do a google search for it.

You might also want to download Talkpcr for regular scanning as well as
swlog for hf broadcast and the like.

For sstv, packet and other digital modes, there is an abundant of soundcard
software available as freeware that will work for you. Again, do a google
search and you should find what you want

Go to www.radioreference.com to find frequencies in your area. You have to
sign up as a member but it is free and worth it.

Hope this helps you out.

Eric

Topic: 2958 Message: 2961

Thanks for the info Eric
I just called a place that sells the PCR1000 and I asked them if you can do trunk tracking, and they said no. Now I'm confused. Maybe that is because the software that comes with it will not do it?
Also I see in other posts people saying to backup the epromm. What is that for and should I do it before running any third party software.
I am going to go buy the receiver tomorrow, so I guess I have alot to learn here.
Thaks again

Mike

hi Mike,

I just got mine a few weeks ago and am still learning as well. It does do trunking with "TrunkPCR software" with out any mods. If you get the pcr100, you will have to do a mod to the discriminator to get it to work.

Bear in mind that "TrunkPCR"
(http://104452.home.icq.com/trunkpcr/TrunkPcr.html) will only work
with Motorola systems. There are a lot of other trunked systems about
and other software to decode/track some of them.

Well I picked up my PCR1000 a couple of hours ago. Man am I lost.
I have to learn what all these controls are for. And how to know if
what you looking for is in fm,am,cb.....and the freq steps and all
that. Anyone know where I can go read up on this. The unit did not
come with much of a manual...

Well I am going to go back and see what I cah hear,,,,
Thanks
Mike

2965. TrunkPCR

Yahoo group: PCR1000
Date: 2004-11-07 09:36:00 UTC
From: Mike
Topic: 2965 Message: 2965

For some reason when I open Trunck PCR my system locks up...I am running XP. Could that be the problem?

So If I get it running..what do I have to do. I see on the receiver there is a output for Packet(9600bps) is this what I plug into the sound card?

Again
Any info would be great
Thanks
Mike

Hi Mike,

I have tested Trunk PCR on Windows 95, 98, ME, 2000 Pro and XP Pro in
designing it.
I haven't had any problems in XP. One other user had a problem with the COM
Port, but that was fixed by editing the Trunkpcr1k.ini file...

Try downloading the sample San Diego Banks.zip file, extract it to the
folder where you installed TrunkPCR.
It should create a folder named "Banks" in the install folder too.
Open Trunkpcr1k.ini with NotePad and change the COMPort setting to the
propper COM Port for your use and save it...

If that doesn't work, email me directly...

Regards,
Jay

Thanks Jay.
That did the trick. The comm port was set ok but after getting the
San Diego Banks.zip file for some reason it does not lock up now.
Now I can have some fun and try to figure out have to work the
software.
Thanks again
Mike

Hi Folks.

Just thought I'd stop by, and post. I'm thinking about getting a PCR1000, as a shipmate has one, and it looked pretty cool....I'll probably be using it more in a marine environment (tracking NOAA stuff, and navtex) but I think that it'll be alot of fun... I'll let you guys know if I'm able to pick one up.

Hi
I was wondering what everyone is using for an antenna. I'm new to this but I think I'm picking up alot of noice from the computer. I'm using a discone and my receiver is grounded. I'm also looking to make or buy an antena for the lower frequencies. The problem is I dont have alot of room. Any ideas?

Also I have been searching for frequency lists of what is out there for me to listen to.

Maybe its just my set up, but I'm not picking alot of stuff up.

Any info would be great.
Thanks
Very newbie
Mike

.csv is comma separated variables. It's a common format used by Excel and most other spreadsheet programs (like .rtf or .txt in word processors).

2976. Mac OS X control program for PCR1000

Yahoo group: PCR1000
Date: 2004-11-11 22:16:02 UTC
From: Fritz Anderson
Topic: 2976 Message: 2976

Man Overboard Software is pleased to offer a no-compromises control program for the Icom IC-PCR1000 computer-controlled communications receiver. MacR-1000 manages frequency lists, supports band searches (with lockouts), CTCSS tone searches, and frequency-list scans. Frequency lists can be imported from tab-separated text, CSV files, and .dbf files; export to tab-separated text and CSV.

Saving of frequency lists is disabled until a registration code is purchased for $21.95.

MacR-1000 requires a serial port and Mac OS X version 10.3 or later.

Visit <http://software.manoverboard.org/> for more details, including the complete user manual.

Topic: 2977 Message: 2977

Ok, guys.

I know I'm a newbie and all, and I've been looking back at past messages to get an idea on how to run my soon-to-be-arriving (tx Dan) PCR. It looks like a Radio Shack discone is the way to go for an antenna, but with me having such limited space on the ship here, I guess I'll just have to use the supplied ant. And what the HELL is an EEPROM??? All I've been reading about is "backup your eeprom" this, and "backup your eeprom" that. What in God's green earth is it all about?

If there is a "big brother" out there that can help me and my shipmate out how to best set up the PCR to get SAT data (NOAA met., mostly), and to listen in to marine bands, I would greatly appreciate it.

T.I.A.

Hi Jim,
Read your mail with great interest, for my two pence worth, I think a discone will do quite well for the higher bands, you can get them that stand on the table etc. if an outside one were to be a problem which I assume would be better than the supplied antenna I think, but for HF I think and also use a long wire with an ATU in line, I get good enough results when compared to my TS570 and a G5RV although the signal is usually 3 to 5 S points down on the PCR 1000 but this is not usually a problem, and there must be a little space for a length of wire on board ship 10 metres will do.
Regards,
Herbie.

Don't worry and have fun.
The EEPROM is a chip that remembers all the electrically adjustable parameters
of your unit. The early ones had a problem with forgetting all these. So some
software people wrote some programs that looked up and saved this data, with the ability to
restore it, just in case. Most eeprom 'fingerprints' are quite similar,
and have been posted. I'll guess it costs between $30-50 for Icom to 'recalibrate'
a unit with amnesia.
TalkPCR is one of the programs that can save your download, and I
beleive the second generation of Icom software can, too.
There really hasn't been too much trouble with these for the past 3 years,
but should be done to save you some troubles in the future.
Good Luck!

Hello , My two pence worth, if you have room for a discone, you have room for any vertical antenna and most have much greater gain than a discone. discone antennas are not particulary good at any one frequency, so try to stick to an antenna that suits what your wanting to hear.
Regards dave.

Guys, I just want to thank you for the help on the antenna issue. I unfortuneatley don't have room enough for a discone, but I'll see what I can bribe out of the "Old Man". He has an interest in this too, and I'm going to see if I can't get a dedicated PCR for the bridge. In case any of you are wondering, we have a GMDSS system on board, and though it may be hard to believe, yes, this "Newbie" is its primary operator. Scary, huh?

I guess what I'll have to do is just fiddle with it (when it gets here), and see what happens. Oh. A quick questiuon before I go: Which software is better, the Talk PCR, or the Bonito?

That's an easy question...
TalkPCR.
However, Bonito has features that TPCR has never dreamed of- do they work well...? That's been the subject of many, many postings.
I use TPCR to control the unit, and an other professional software package to do the imaging. (SkySweepPro)
But the more things you want to do with software, the more power you should have with your CPU.

Topic: 2984 Message: 2984

Hello, I am a newbie to the group. I searched the archive of posts but found nothing pertaining to my question. Is it possible to use a serial to ethernet adapter with the PCR-1000 in order to network the PCR-1000. My thought is to remotely mount the PCR-1000 near the antenna to cut down on feed line losses since I like to listen in the UHF range. A possible power source for the PCR-1000 would be to do power over ethernet and handle the audio output with an additional wire. It seems like a do-able idea. I didn't want to reinvent the wheel. Any suggestions? Thanks.

From: k4ahu
Topic: 2984 Message: 2986

Sure do.

It is a Lava Ether-Serial Link. I've had it for a few months as I've not had time to try this out. Anyway, it allows you to put anything serial onto the network. I am not having much success with it and the PCR-1000. I will call Lava's tech support next week and see if there is something that can be done. The adapter shows up in Device Manager and you can change the assigned port number. However, the PCR-1000 software does not "see" the COM port. I've changed the port assignments, but, no joy.

Here is the link to the item that I have for this project.

http://www.lavalink.com/index.php?id=257

I noted a nice series of articles is Popular Communications regarding puting a receiver on the network. However it revolved around the Ten-Tec receivers. Though the articles were very well written, they only covered networking a Ten_tec receiver. I will email the author and see if he is aware of anything pertaining to the PCR-1000.

I think that this is a neat project since we all have computers and, why not put the PCR-1000 on the network?

Thanks for your response.

Kent

Have you considered a more traditional method? Rather than converting the serial port to Ethernet, why not just extend the length of the RS-232 port?

You have a couple options. In an industrial setting, you typically would use RS-422. That's a little much for home use.

There are many RS-232 extenders that use traditional CAT-5 cabling. The advantage here is that you're not emulating a serial port via software, so the PCR-1000 programs will definately "see" the port.

Hi

I used a serial to Ethernet adapter connected to a BreezeCOM wireless link a few years ago.

I had a few issues with the software and keeping the radio running as it needs to be sent a command ever few seconds or it goes to sleep. I used perl and Linux but I'm sure you can use any port tester to send commands to the Ethernet adapter.

I used these etherpads http://www.sanpeople.com

Have you considered a more traditional method? Rather than converting the serial port to Ethernet, why not just extend the length of the RS-232 port?

You have a couple options. In an industrial setting, you typically would use RS-422. That's a little much for home use.

There are many RS-232 extenders that use traditional CAT-5 cabling. The advantage here is that you're not emulating a serial port via software, so the PCR-1000 programs will definately "see" the port.

Have you considered how you'll run the audio? No point in running a
network adapter when you don't have a network adapter for the audio-
that will have to a pc, somewhere, if not a dedicated PALM to stream
audio into...?... 802.11b? but somehow the two will have to be on the same channel...

2994. Radio not working!!

Yahoo group: PCR1000
Date: 2004-11-14 19:14:23 UTC
From: mat_2010
Topic: 2994 Message: 2994

hi

I havnt used my ic-pcr1000 in quite a while and its just been kicking around in my room (not literally). When i tried to use it this afternoon however it didnt seem to work!!

To start with i couldnt find the power adapter that came with it so im using a variable voltage one at about 12V DC, 300A. I dont think that this is the problem though. The unit seems to switch on fine and the LED on the switch lights up. I can also sucessfully change frequency etc. using the control program on my laptop (win XP), however there is no sound either coming out of the built in speaker or the headphones plug on the back. Also the band scope shows nothing, not even static when i turn it on! i have opened the unit up and tried putting the headphone/internal speaker switch either way, as well as adjusting the af gain but still nothing.

Has anyone else had the same problem, or know how it could possibly be fixed?

Thanks for any feedback

mat

Get a (much) better power supply. Though I haven't had problems with my
PCR, your symptoms are CLASSIC for an undervoltage situation. (That happens
when you can't provide enough current). The Icom supply is rated for 1000 mA.
Radio Shack sells a very good 1.5 A unit.

2997. Antenna problems

Yahoo group: PCR1000
Date: 2004-11-14 21:05:32 UTC
From: gooser01@yahoo.com
Topic: 2997 Message: 2997

I went to Radio Shack to find a discone antenna. The
idio....salesperson had no clue as to what I was talking about, and
offered me some crappy CB antenna. At this, I said no thanks and
walked out. Any other suggestions where to go, or how to get one?

I rarely walk into RadioShack without a part number on the tip of my
tongue. 20-043. If the tell you they don't have one, be sure to ask "Who does?"
The computer should provide an area inventory.
Also, since that antenna happens to be a 'hypodermic for static charges',
I'd be reluctant to leave it connected to the radio 24/7. There is nothing to
divert a static discharge from finding ground inside your radio. Most TV
antennas are DC grounded to prevent a charge buildup, the discone's center
element is not. Except for in the radio. (Remember, components that are voltage
stressed become conductors, for a moment.)
Try again. Or at least find a different store.

Hi Bob,

Thanks for the suggestion and the additional information. Yes, I had considered using a RS232 extender but I had not considered it as thoroughly until you mentioned it. I wanted to see if radios with the legacy RS232 ports and even with the newer USB ports could be put onto our own home networks and additional useful work be done with them or shared access be provided. Based upon your suggestion and the comments of others, I am formulating a plan of action though. I will keep the group posted.

Hi Robby,

Thanks for your post. At least now I know that this can be done. I was thinking that there was something in the PCR software that kept me from seeing the port. I also did not appreciate that a command needs to be sent periodically to the radio running. Thanks for the link as to the etherpads. I am adding this to my own personal knowledgebase.

Hi Skip,

Yes, I had thought about the audio. At the least, I thought that I might used one of the unused wires on the CAT-5 cable to send the audio back although there would be some degrading of the audio signal. I would power the PCR1000 at the site where it is located. I also though of a kluge where I could simply output the audio to an FM modulator. The ultimate goal would be to be able to power the PCR1000 with power over ethernet and send the audio via the same cable. This would probably require some type of homebrew adapter and there might not be enough unused wires in CAT-5 cable. This is my idea, though.

From: Robert Sillett
Topic: 2984 Message: 3006

You cannot directly use TalkPCR or the Icom factory software to
remotely control your PCR-1000. They're just not designed for that.
You'd have to use some sort of software like VNC or pcAnywhere to
remotely control a PC or use some combination of hardware and software
to extend the length of the RS-232 port.

I have custom software that publishes the PCR-1000 on your home
network or the Internet. An installation guide is included with the
program.

If you have Windows XP Professional, you can put your PCR-1000 on the
web. If you just have XP Home, you can still remotely control your
PCR-1000 over TCP/IP, but you won't have a web front-end as XP Home
does not have a web server.

You can find more about my Shortwave Log program at the web site
http://www.shortwavelog.com or the Yahoo group
http://groups.yahoo.com/group/swlog

Currently two PCR-1000s are online and accessible via the web:
http://www.shortwavelog.com/RCSweb - Pittsburgh, PA
http://kc-hamnet.gotdns.com/RCSweb - Kansas City, MO

3008. Re: network a PCR-1000

Yahoo group: PCR1000
Date: 2004-11-16 05:15:52 UTC
From: k4ahu
Topic: 2984 Message: 3008

Thanks for the info, Bob. I've joined the shortwavelog group and I am studying how to use your software. This may be what I am looking for.

I have been able to remotely control my PCR-1000 using a NetIO serial to USB adapter and the Keyspan USB Server. This puts the PCR onto my local network and I can use the standard PCR-1000 software to control the program.

Anyway, your program looks to be more feature-rich, so, I will try it out.

Thanks,

Kent

From: Glenn Blum
Topic: 2987 Message: 3011

Just my two cents,
You can't compare Radiocom to Talkpcr.
Talkpcr is scanning software and radiocom is monitoring software with
decoders built in.
Radiocom works great just for hf CW, RTTY, FAX and NAVTEX broadcasts and
it DOES NOT SCAN.

From: paulsurf1221
Topic: 3012 Message: 3012

I want to order the radiocom software for PCR1000 but I have a question:

There are two versions of Radiocom 5.2.

what is the difference between? :

RadioCom-RX with IC-SWL = for ICOM PCR-1000 + 100

and

RadioCom 5 RX / TX

Do I have to order the first version (IC-SWL) for the PCR1000? and are there any modifications I have to make with the PCR1000 or will the software work with the unit as it is ?

Thanks,

Paul

Hi,

I live beyond electricty and only run mine from a 12 v
caterpillar battery. It gets charged from a table top
battery charger when the generator's running but
that's only a few hours a day.

The rest of the time, the battery voltage is between
10 and 12v due to a refrigerator connected to it as
well.

Never had any problems. Certainly no AC noise :)

From: Randy Perretta
Topic: 3013 Message: 3016

Hi,

I'm at 37 38' x 121 43'on a mountaintop (around 3000')
due east of San Jose California. I'm curious about
antennas as I think I can get a good chance of hearing
launches at Vandenberg which I can see, and would like
to hear air traffic from Edwards as well which might
be a bit of a stretch.

I only just got the PCR1000 which is replacing an
R71(Anybody want an R71?) so I haven't been above 30
Mhz much except with an R10 handheld.

Does anybody have antenna suggestions? I'm using a
discone with good local results but I imagine
something directional might be necessary for longer
stretches. My VHF experience is as mentioned above,
light.

thx,

Randy

3018. Comment on Palms, and Tungsten caveats

Yahoo group: PCR1000
Date: 2004-11-18 15:37:44 UTC
From: Harry White
Topic: 3018 Message: 3018

Friends,
Another point about Palm PDAs and the PCR-1000 ... not all of the new Palm PDAs have serial connection capability (in lieu of a USB-Serial converter). So if you want the simplest connection, check first! This one one of the reasons I chose the smaller-display Tungsten C instead of the newer, fancier Tungstens with the BIG displays. Of course, the Tungsten C has the integrated keyboard with its attendant benefits. Note that one still has to pick up a separate serial cradle but ebay eases the financial pain of that one. I'm not sure if Palm's serial cable includes a power hookup, something that IS included in the serial cradle package.
Kind regards,
Harry

3019. Palm software and a Tungsten-class util for PCR-1000

Yahoo group: PCR1000
Date: 2004-11-18 15:42:15 UTC
From: Harry White
Topic: 3019 Message: 3019

Friends,
I just got PCRPilot and IP1KC running on my Palm Tungsten C. Both are nice but I like IP1KC better ... such a nicely written package!

PCRPilot is available at this group's Yahoo site under FILES.

IP1KC is available at http://geocities.com/jjintokyo/

To use PCRPilot with my Palm Tungsten C, I had to install a serial library utility that is available via

http://www.palmopensource.com/index.php3?more=382

or directly at

http://www.drpub.fbe.fh-darmstadt.de/palm/

It must be running or else PCRPilot fails to load. Maybe someone can get permission to put this utility on the group's website since most of the newer Palm PDA machines seem to need it.

Kind regards!
Harry

From: nt1g@comcast.net
Topic: 3012 Message: 3020

The difference between the two versions is one is for RX only, and the other one is for a ham's TRANSCEIVER, to broadcast images. (The PCR doesn't have that capability, but will work with either.) The PCR software uses a KEY (or Switchbox) called IC SWL.
You'll need a 9 pin serial cable, and a 'walkman' to 'walkman' audio cable, but if you are going to use your PCR speaker, that's not necessary. In fact, I'd recommend you use TalkPCR and the internal speaker to set up and learn how your PCR works.
You'll have to adjust a little switch inside the unit to jump between speaker and line-out modes.
It takes a little practice getting used to the controls, so try out the local AM, FM and TV stations, along with the Weather and Time broadcasts. Then try adding the audio cable and playing the radio through your computer speakers. (Remember to switch the little audio switch inside) Then you should be ready to try some of the digital modes, and some imaging features.
Have fun and Good Luck!

Paul,

You might want to consider downloading MixW (A ham software package, shareware)and checking it out also. It will do all the modes that Radiocom does but is much easier to use. Same audio hookups as Radiocom.

George

Paul,
There is not really much rtty out there unless it's inside the ham bands. The only useful rtty will be NAVTEX broadcasts right around 518 khz.Radiocom 4.5 works fine.
I agree with what Skip says. Make sure that your pcr's internal audio switch is set for headphones instead of speaker only if you plan on using you line-in on your soundcard.Radiocom 4.5 does not tolerate overdriving by cutting out with higher sound levels.

3024. pcr1k for linux

Yahoo group: PCR1000
Date: 2004-11-21 11:17:08 UTC
From: Steve
Topic: 3024 Message: 3024

Hey guys, I've been tearing my hair out trying to make the very few programs written for linux to work with the unit. I have a tri-boot amd 850 machine running Windows xp pro, 2k and suse linux 9.0. Any help in compiling a program in linux 9.0 and making it acutally work with pcr-1000 would be greatly appreciated.

Thanks

Steve, K1FRC

I used to have a smallprograme which transfered normal Frequency
lists to **MCH files for the Pcr1000.

I lost it when I re built and changed PC and Hard Drive..

Anyone know of programe which will work with XP (Prof)....

Have a look at WUN. Theres tones of stuff out there...

(Even Dolphins that have been tagged with transmitting beacons via
sattalite)

Any OS that can read/write to a serial port is fine. All you really need to control the PCR-1000 is HyperTerminal or any other terminal program. Granted, it's a little difficult to manually poll the radio 20 times a second, but you can do the basic stuff.

I can tell you that debugging over a USB-to-Serial adapter is nearly impossible. I recommend that you use a motherboard/computer with a real serial port.

I am using an IOGear USB PDA/Serial Adapter Model: GUC232A

purchased from Best Buy. Works very well with the standard PCR-1000
software.

I have also networked the PCR-1000 using a Keyspan USB Server. That
way you can use CAT-5 cable if you need to remote locate the receiver.

Although I normally use an old little HP Omnibook with
a serial port, I use a Keyspan with the MacR-1000 s/w
that was announced here a few dyas back. The Keyspan
works just fine with Panther. No muss, no fuss.

BTW,the MacR-1000 s/w works just fine as well and is
pretty easy/convenient to use. I'm going to register
this week.

3040. Re: Bonito Radiocom software and the PCR 1000

Yahoo group: PCR1000
Date: 2004-11-24 06:37:20 UTC
From: rocketradio2002
Topic: 2987 Message: 3040

If you want to spend mountains of time plowing through the very poorly written manual and then spend hordes of time learning the software (this is NOT user friendly software) then you might enjoy it. But it will be a challenge at the very least. I have owned the very first version of Radiocom and ver 4.5 (which I still have) which is included with the PCR-1000. The newer version was a better product and added a couple more modes, but still was a pain to use. The author needs to outsource the manual to be rewritten by somebody that speaks fluent English. Its a very attractive looking screen though pretty busy, but it sure can be difficult to use (try using the RTTY mode and have to manually input the audio frequencies and baud rate).

Althought most of what is written about Radiocom is TRUE, TalkPCR is a different program than Radiocom. TalkPCR does a very good job at CONTROLLING the PCR, Radiocom that , but ALSO processes the audio into graphics, of various sorts. As mentioned lately, MixW is an alternative. And there are others. (Poll coming up...?) I spent more for SkySweepPro then I did for my PRC-1000 radio. A brillant multimode audio decoder, the radio still needs to be controlled by TalkPCR. So, even if Radiocom DOES tickle your fancy, and gives you no problems, I'd suggest you keep and have TalkPCR available as a simple tool for your radio, just to try out non-PCR controlling programs.

Jim!
Aircraft transmissions are AM (Not FM).
Try changing your Mode.

From: Randy Perretta
Topic: 3038 Message: 3046

Hi,

It'd help to learn the layering, tower, approach/departure, the geographical zones around the airports all of which have a specific frequency and controller.

There are handoffs between them which you can track if you're quick or have a list of frequencies in memory that follow one of the routes.

For instance if you're flying to Oakland from Los Angeles, you can track several handoffs from the outer zone. Oakland Center which has the plane in a ZOA zone at altitude, will handoff to Bay Approach when the plane goes below 15,000 feet. You can then listen, probably on 121.3. If you hear the handoff, the controller will give the contact frequency.

At that point, wave as you go by where I live.

Just prior to landing, Bay A/D hands off to Oakland tower on 118.3 or 127.2. Upon landing, Oakland tower hands off to Oakland ground control on 121.75 or 121.9.

Tracking an aircraft from ZOA to gatelike this gets the concept of how airpsace is controlled and is a good test of radio and skill. Enjoy!

Randy

Alright,... "what kind of dish is it?" Namely, the band. That goes along with, "How big is it?"
and "where is it aimed". And "What do you want to hear?" and "why aren't you using it for it's original purpose?" Most TV antennas can be used with the PCR, above 50 Mhz., and roughly 1 GHz. But since most of the satellites I know move across the sky quickly, I wouldn't know how to use a BUD with the PCR-1000. (BUD=Big Ugly Dish)

problem with sat dishes is they are narrowband..and although they might work great at amplifying signals from satellites.... you'd be hard pressed to get to work for anything useful below 1ghz.......ESPECIALLY with the LNB's (Low noise Blockers) that are usually installed.. although there are some good tutorials on converting the DSS (18") dishes for use with wi-fi or other similar 2.4 Ghz wireless services......and as skip said..it really depends on the type of dish you have.. if you have a dish network,directTV or primestar(defunct) small 18" or so antenna thats good...although there are C and Ku Band satellite dishes as well(anywhere from 4 to 16 feet across...yeah..THOSE were the days..) ... although getting more rare nowadays......

server to broadcast and
> stream audio to clients on a web browser.Would you still recommend
windows for this or
> linux?

I have had very good success remotely controlling and streaming audio
from my PCR-1000 over Windows. I chose Windows over Linux because it
has a 90%+ market share, so my program would reach the widest audience.

From a programming perspective, I have found more code samples on how
to access the serial port.

And from a PCR-1000 perspective, there is also an ActiveX control
available for the PCR-1000. So if you know how to write a COM wrapper
, 90% of everything is done for you. I don't have the URL for the
ActiveX control handy, but I'm sure that the gods of Google can find it.

You could also choose to program your controller in Java. Then it
would be multi-platform.

My PCR-1000 is temporarily off-line, but you can see my software in
action at N0OXV's web site:
http://kc-hamnet.gotdns.com/RCSweb

From: david_a_stewart
Topic: 3057 Message: 3057

To all

Those of you that are hams may know this already but Simon Brown and his band have been working on radio control software for some time. I have been using Ham Radio Deluxe with my TS2000x since the first release and am very pleased with it especially as it is free!. Well they have done their magic and the latest version supports the PCR1000 and at first looks it is pretty good. It doesn't have the same bells and whistles as Radiocom but is easier to use than talkpcr etc for shortwave and utility listening and its bandscanning feature is pretty cool as well. Nice to see it also has some cool extras in the form of a multiPSK decoder and mapper and logbook programs. Give it a try!

Here is a link to Simon's HRD homepage : http://hrd.ham-radio.ch/

Glenn,

I have it up and running right now and works pretty good, but I
can't get the DSP to run properly though. Just download the latest
version of HRD and select the 1000 under the Icom radio area. Its
the very last one in the list.

3062. Paging Decoding software

Yahoo group: PCR1000
Date: 2004-11-27 05:57:34 UTC
From: rocketradio2002
Topic: 3062 Message: 3062

I was searching today for ham software to decode various digital signals that would use the discriminator port (the "packet" port) on the 1000. My search was sidetracked when I came across a software package that was freeware at http://www.p2000-flex.tk/ . Being the tech junky that I am I had to try it out. To put it simply I was amazed at how well it worked. Everything is in the clear. I honestly had no idea that alpha pages were sent in open with full information. Doctors getting ER pages, firemean, tow truck drivers, sweethearts sending lovenotes, email addresses, and yes even SPAM! I don't want to open a discussion of the legalities of this, but was more opening the can of worms of why the paging companies aren't encrypting digital tranmissions.

George

3063. I just bought a PCR1000 in SW Florida and need help.

From: Frankee
Topic: 3062 Message: 3065

Hi Jim,
this is a known phenomenon. If you should use (do give it a try, has
been freeware for some time now, and it is an excellent piece of
software) TalkPCR, you would find that this has a more elegant solution.
If you should have the bandscope switched on and change to SSB/CW, the
bandscope freezes, but the audio is still available. As you say, it's
not a show-stopper, but it is good to know!

Enjoy your PCR-1000!

Frank (a satisfied used for almost 5 years)

Hi Dave,

Have you recently installed any software that also
uses the COM1 port? I ran into that problem when I
installed my Palm 100 software a few years back.
after the Palm 100 software was installed I couldn't
get TalkPCR to see the PRC1000 on COM1. I took the
Palm 100 software off the PC and it restored access
to the COM1 port for TalkPCR.

Make sure you have download the latest beta version of the software. The file should be called HRDCDv031b579.zip or maybe a later set of last three digits.
The link to it is here: http://hrd.ham-radio.ch/downloads.html#Beta_Kits.
Its labelled a beta but seems quite stable although one or two functions aren't completely sorted yet but no doubt Simon is working on them.

Topic: 3066 Message: 3073

The same thing happened to me this AM. I installed HRDeluxe, yesterday, and couldn't find the PCR-1000 setting. Today, after reading a posting that said to upgrade, I did. However, when I ran it, I got a message that said that it couldn't see the radio on Port 1. After playing with the cables, still nothing. When back to TalkPCR and still couldn't see my PCR. Recycled the power, nothing. Rebooted my PC, nothing. Switched serial cable to Com2. That works.
With both HRD and TPCR...
Now I just got back from changing the serial cable back to Comm 1.
They (the programs) now both work.
Somehow my com port 1 died...but now it's back.
Hope your's is working soon. HamRadioDeluxe is a WONDERFUL program!

Thanks Dan, Skip and Tom for the replies!

I have not installed anything on that computer for 2 years - and
it is never on the internet!

I changed cables (serial) and I plugged it into another computer!
No luck!

Next step will be to open up the radio and check the supply voltage
inside the unit.

Other than that - I am at a loss!

OK -

I took the radio apart - supply looked good inside.
Put back together - and hooked back up - and at
came alive! - HOWEVER - making loud random 60hz Hum sounds
through the Audio. So - I am going to get a new wall wart
power supply for it - and hope that solves the problem!

Thanks again for all of your help - and I will let you know!

If this has happened to you, you don't need to actually delete the Palm
software. The easiest solution is to close down the Hotsync manager
(rightclick on the symbol in your task tray, select exit). You can then
restart the Hotsync manager when you're done with the PCR1000.

Talk PCR is a program designed to work with the Icom
\Pcr 100/1000.

Basically, it enables you to set pre-determined
frequencies in banks and you can scan, log date, time,
frequency and audio file, while you are away from the
scanner

Bill - been using it for the last 2 years

TalkPCR is a Control program for the PCRs. It doesn't decode teletype, or
fax, or satellite images- It just controls the PCR as if it was a desktop radio.
Two of the strengths of TPCR are it's Memory Lists, and the ability to store
your EEPROM info. The calibration data of your radio (eeprom) can be replaced
should you develop a case of 'amnesia'.
There are simplier, and much more complex programs for the PCR. But
TalkPCR seems to find a happy medium.

TalkPCR is a very popular third-party program for controlling your PCR-1000. It has a very crisp, clean interface and excels at frequency management. TalkPCR also has a superb implementation of the PCR-1000 bandscope.

It can be downloaded from
http://www.mahy.demon.co.uk/talkpcr/talkpcr.htm

There are two versions:

v2.4F2: freeware

v2.99: shareware, although that's not entirely correct. The author of TalkPCR no longer charges for the program. He has made v2.4 freeware but hasn't gotten around to making v2.99 freeware. As such, it pops-up a dialog box every now and then asking you to register.

It looks like the author has removed v2.99 from his web site.

Tom!

Here is the craziness. The Green power light was on steady.
I measured a no-load voltage out of the power supply at 16.8 VDC.
I opened up the radio - and measured the PS voltage under load
and it was 13.8 VDC. By hearing that one strange 120Htz hum sound
through the radio - briefly - it must have been a failing Filter Cap?!?
Anyhow - radio has now been on for 15 hours - and all is well!

3091. Antenna for use on a 37' foot sailboat

Yahoo group: PCR1000
Date: 2004-11-30 19:50:12 UTC
From: Jim
Topic: 3091 Message: 3091

I have received several good suggestions for an antenna for the PCR1000, but most seem impractical for use on a boat. I'm looking for one that will recieve weather, the marine weather nets like "Southbound" and the Caribbean Weather net. i don't want to transmit. Any suggestions on an antenna that would work in the marine setting and yet do the job?

Jim!

Many years of sailing on this end. What I found to be a quick and
dirty
approach is: Run a length of wire (stranded) up the Burgee Halyard,
then back to the Rear Quarter (Port or Starboard). From there - down to
your radio. Should be great to receive Herb!

Jim, Dave & all,

I live on a sailing boat, and use my PCR1000 mainly for receiving weather reports (WeatherFax and RTTY).

I have tried Dave suggestion in the past, but in my case, I was disappointed with the results (due to too much noise in marina and the signal was not sufficient enough to produce clear weather reports (HFFax as well as RTTY).

What I ended at with, have built a loop antenna for SW band (in my case 5-18 MHz).
You can add a PreAmp later if needed.
It is a little bulky, but the results are excellent.

Another approach (which I have not tried) is to use an Active HF Antenna (like Ground Plane + PreAmp).
The con in this scenario is that this type of antenna gets more electrical noise than a loop antenna, but, as with everything else - one have to compromise;).

My 2 C's.

73'S,

Niki

3099. RE: [PCR1000] Radio Quit

Yahoo group: PCR1000
Date: 2004-12-01 00:16:27 UTC
From: Tom Ziko
Topic: 3066 Message: 3099

Hi Dave,

That is very interesting. Then it must have been that
the wall wart was not putting out enough current for
the PCR1000. I don't see how a filter capacitor would
cause a drop in current, however, that could be why
the PCR1000 quit working. It would be interesting to
measure the current of the old wall wart under load
and then measure the new one as a comparison.

Glad you got it fixed. The PCR10000 is a fantastic
wide band receiver and I have had mine since 1996.

Subject: Re: [PCR1000] Radio Quit

Tom!

Here is the craziness. The Green power light was on steady.
I measured a no-load voltage out of the power supply at 16.8 VDC.
I opened up the radio - and measured the PS voltage under load
and it was 13.8 VDC. By hearing that one strange 120Htz hum sound
through the radio - briefly - it must have been a failing Filter Cap?!?
Anyhow - radio has now been on for 15 hours - and all is well!

Hi guys....

I'm working with both TalkPCR (works great!) and RadioCom (slight problem)....the spectrum analyzer window (in all Rx types) seems to be dead....I see very minute bumps on the bottom of the analyzer, but that's it. I HAD been Rx fax from New Orleans clear as day on different freq's, but when I wnt to show a friend, KAPUT!!! What Gives?

Antenna issue aside, the program Orbitron may help.
http://www.stoff.pl/
now, if you want a really great antenna...
http://www.askrlc.co.uk/
in general, a discone isn't a bad 'low pass' antenna
(for sats near the horizon) but if it passes overhead
you could lose the signal.
The helix above is really the best in most modes.
Good luck and have fun!

3104. PCR Newbie has many questions!

Yahoo group: PCR1000
Date: 2004-12-02 01:43:54 UTC
From: nydxa
Topic: 3104 Message: 3104

Greetings to all! New to this group and I have a few questions about the PCR-1000.
I'm seriously thinking of purchasing a PCR-1000 and the on line research I've done portrays a definite love-hate affair with this radio. Some love it ☐ others hate it. I've been in the radio hobby
since 1964 and currently hold Amateur Extra Class license. I've got
my HQ-180, my FT1000MP and several other radios. I guess I'm trying
to say that I recognize what to expect from a $375 radio. Never the less, I have several questions and I'd appreciate any guidance or info any of you can offer. The list is extensive, so choose and pick!

1. I'm interested in DX'ing the AM broadcast band. How is the sensitivity and selectivity. The later is important as I live 2 air miles from a 50KW AM station ☐ WABC.
2. I've been reading about the Lowe PR150 preselector. Are these still available, and at what price.
3. I'm thinking of using this for VHF weather sat reception. Can anyone suggest any good software that integrates with the PCR1000?
4. On HF, how is the front end. I read it overloads very easy.
5. Below 550 khz, how is this receiver for receiving NDB's?
6. As a scanner, does any software offer a band scope so I can see any activity on adjacent frequencies?
7. I read all sorts of horror stories about corrupting the EPROM. Is this still a problem?
8. I may have a good price on an early PCR1000. Are early units in any way inferior to current production?
9. How about the DSP board? Worth purchasing? Is it simply on / off or can you manipulate the filtering?
10. Aftermarket software. What's available?
11. Now here's the tuff one What's the one thing you hate about
the PCR1000?

Look forward to receiving your responses. Thanks

Bob

10. There's a bit of aftermarket software, most of it free. Initially, you get Radiocom 4.5.
Much improved since the first release, 4.0.
I control my PCR using a program called TalkPCR. This has been 'given' to the PCR community. I was lucky to be able to purchase a registered copy, earlier. Some folks are still having problems with the free version requesting registration.
Another Control PLUS program for a lot of the computer controlled radios is Ham Radio Deluxe. This free program allows you to control your radio, log your reports, and run PSK-31 with the proper transciever.
Another 'free' control program is ShortWaveLog. If you are using XPpro or Win2K, you can use these programs to access to your PCR, over the internet.
Unfortunately, my favorite 'decoder' program goes for $650. That's just about the price of a Winradio and Advanced digital package. SkySweepPro is a decoder program, best described as 180 degrees from Radiocom 4.0.
There are lots of other free 'special purpose' programs available. ACARS works fine. (I still use SkySweepPro). Trunk scanning software.
I developed a fear of products that you have to get the software from the hardware people. The PCR gives you this freedom. I don't need a bit of Icom software. (ex-Mac&palm user)

SkySweep.com
SkySweepPro. There is a demo mode for those who are interested.
It runs well-even with SETI@Home running in the backround.
The downside is that you can buy 2 PCR-1000s for SkySweep's
$650 price tag.
They (folks up in Finland) seem to be right on the top of things.
I use TalkPCR to control the radio.

The $40 GE SuperRadio is much better than the PCR-1000 for AM. Much
better. Spend $40 on the GE SuperRadio and $25 on a loop antenna.
You can't beat it for AM DXing.

> 3. I'm thinking of using this for VHF weather sat reception.
> Can anyone suggest any good software that integrates with the
> PCR1000?

I don't know of any programs that integrate, meaning that the
satellite software directly controls the PCR-1000. SatScape is free
and works great, but you have to use your own control program.

There might be. I'm not really interested in receiving satellites, so
my knowledge is limited.

> 4. On HF, how is the front end. I read it overloads very easy.

It does overload very easily. If I use a longwire, I must use a
preselector or I hear images all over the place.

What's strange is that the Radio Shack discone is the perfect antenna
for the PCR-1000. The antenna is around $50 and is, as all discones,
designed for VHF/UHF. But what's cool is that the discone can pick up
HF too. The signals are, of course, weaker on HF. But the discone
attenuates the HF signals just enough that there's no overload.

I cannot stress the beauty of the Radio Shack discone with the PCR-1000.

> 5. Below 550 khz, how is this receiver for receiving NDB's?

Pretty crappy. All my other radios receive LW better than the PCR-1000.

> 6. As a scanner, does any software offer a band scope so I can
> see any activity on adjacent frequencies?

I don't think any of the programs out there display a band scope while
actively scanning. But if you mean that if you tune to 425 MHz, can
you get a band scope from 400 MHz to 500 MHz - sure. Many programs do
that.

> 7. I read all sorts of horror stories about corrupting the
> EPROM. Is this still a problem?

Yep. Make sure you have a backup of your EEPROM. That the very first thing you should do on day #1.

> 9. How about the DSP board? Worth purchasing? Is it simply on /
> off or can you manipulate the filtering?

The DSP card isn't spectacular, but it is very good. I use it on my PCR-1000 all the time. I recommend it.

You can set the DSP to values from 0 to 15, inclusive. Some software uses a slider, others a knob. But in any case, you're setting it from 0 to 15, inclusive.

There is also a notch filter with the DSP that works pretty well. That's either on or off.

> 10. Aftermarket software. What's available?

I don't think that there are as many programs out there as one may think. There may be 6 or 7 programs. I don't think that any of the programs are a perfect fit. Some are better for scanning, some for database intgration, some for decoding, etc. You'll probably end up using 2 or 3 programs.

I'm probably the only person on the list that actually likes the Icom factory software. I think it's a really good piece of software.

This link has most of the third-party software:
http://qsy.to/pcr/control.html

> 11. Now here's the tuff one What's the one thing you
> hate about
> the PCR1000?
>

Oh, I can give you more than one thing I hate:

1 - no synch detector

2 - no intermediate filters between 2.8 and 6; that's downright crappy to not be able to have a 4 kHz filter for shortwave. The 15 kHz filter is OK for AM/MW, but it's useless for shortwave.

3 - shortwave reception is just so much worse on the PCR-1000 than on other radios. I've had my PCR-1000 for 5 years and no matter what antenna I throw at it, it's really 70% of another radio on shortwave.

If you are interested only in shortwave, get the Ten Tec RX-320. But I mean only shortwave, because it's crappy on LW and MW too.

4 - overloading. It is just so annoying and tedious. Once I found that the Radio Shack discone works well across all frequencies, I

haven't used anything else.

Bob

The $40 GE SuperRadio is much better than the PCR-1000 for AM. Much better. Spend $40 on the GE SuperRadio and $25 on a loop antenna. You can't beat it for AM DXing.

> 3. I'm thinking of using this for VHF weather sat reception.
> Can anyone suggest any good software that integrates with the
> PCR1000?

I don't know of any programs that integrate, meaning that the satellite software directly controls the PCR-1000. SatScape is free and works great, but you have to use your own control program.

There might be. I'm not really interested in receiving satellites, so my knowledge is limited.

> 4. On HF, how is the front end. I read it overloads very easy.

It does overload very easily. If I use a longwire, I must use a preselector or I hear images all over the place.

What's strange is that the Radio Shack discone is the perfect antenna for the PCR-1000. The antenna is around $50 and is, as all discones, designed for VHF/UHF. But what's cool is that the discone can pick up HF too. The signals are, of course, weaker on HF. But the discone attenuates the HF signals just enough that there's no overload.

I cannot stress the beauty of the Radio Shack discone with the PCR-1000.

> 5. Below 550 khz, how is this receiver for receiving NDB's?

Pretty crappy. All my other radios receive LW better than the PCR-1000.

> 6. As a scanner, does any software offer a band scope so I can
> see any activity on adjacent frequencies?

I don't think any of the programs out there display a band scope while actively scanning. But if you mean that if you tune to 425 MHz, can you get a band scope from 400 MHz to 500 MHz - sure. Many programs do that.

> 7. I read all sorts of horror stories about corrupting the
> EPROM. Is this still a problem?

Yep. Make sure you have a backup of your EEPROM. That the very first thing you should do on day #1.

> 9. How about the DSP board? Worth purchasing? Is it simply on /
> off or can you manipulate the filtering?

The DSP card isn't spectacular, but it is very good. I use it on my PCR-1000 all the time. I recommend it.

You can set the DSP to values from 0 to 15, inclusive. Some software uses a slider, others a knob. But in any case, you're setting it from 0 to 15, inclusive.

There is also a notch filter with the DSP that works pretty well. That's either on or off.

> 10. Aftermarket software. What's available?

I don't think that there are as many programs out there as one may think. There may be 6 or 7 programs. I don't think that any of the programs are a perfect fit. Some are better for scanning, some for database intgration, some for decoding, etc. You'll probably end up using 2 or 3 programs.

I'm probably the only person on the list that actually likes the Icom factory software. I think it's a really good piece of software.

This link has most of the third-party software:
http://qsy.to/pcr/control.html

> 11. Now here's the tuff one… What's the one thing you
> hate about
> the PCR1000?
>

Oh, I can give you more than one thing I hate:

1 - no synch detector

2 - no intermediate filters between 2.8 and 6; that's downright crappy to not be able to have a 4 kHz filter for shortwave. The 15 kHz filter is OK for AM/MW, but it's useless for shortwave.

3 - shortwave reception is just so much worse on the PCR-1000 than on other radios. I've had my PCR-1000 for 5 years and no matter what antenna I throw at it, it's really 70% of another radio on shortwave.

If you are interested only in shortwave, get the Ten Tec RX-320. But I mean only shortwave, because it's crappy on LW and MW too.

4 - overloading. It is just so annoying and tedious. Once I found that the Radio Shack discone works well across all frequencies, I haven't used anything else.

Hi
It is correct that the a good preselector greatly enhances the performance on HF on the IC-PCR1000.
I use a LOWE PR-150, which is one of the best preselectors.
The LOWE PR-150 is no longer in production, so it can only be bought on the used marked.

Can you build? I've constructed most of this project. The best I've seen in a few years.
http://www.bavarian-contest-club.de/projects/presel/list.htm?fCMS=1be231c0a2ee9e5c9c3b0c06738cc274

Notice the 10:1 and 1:10 transformers. The Q function is directly related to the antenna's impedance. A 600 ohm longwire feeding a 100pf and 15 uH series circuit has the Q of less than 00.65 and the bandwidth of 6.4 MHz, at the frequency of 4 MHz. Use a longwire adapter and the numbers change to Q=6.5 BW 400KHz. Add the above circuit and the Q=65 and the BW =40KHz. Plus a LongWireAdapter has a DC resistance of 0 ohm. (Good for discharging static charges instead of sending them into you radio.) Most longwire antennas function better as LightningRods (or static discharger).
Why ground them with your radio?

3127. RG 58 vs RG 59 cable

Yahoo group: PCR1000
Date: 2004-12-05 02:58:06 UTC
From: jyams73
Topic: 3127 Message: 3127

I'm illiterate about cable. What's the difference between RG 58 and RG 59 cable in simple terms? I am installing a new antenna and RG 58 is the suggested cable.

3128. Re: [PCR1000] RG 58 vs RG 59 cable

Yahoo group: PCR1000
Date: 2004-12-05 03:11:18 UTC
From: Dave Shirk
Topic: 3127 Message: 3128

If you are just using it for receive - I would personally use
a good quality equivalent to RG59 - which is RG6 - and used
in all Cable TV applications - so it is cheap! These cables
are 75 ohm.

If you want to use a 50 ohm cable (RG 58 or similar) use
RG8X - better for VHF and UHF,

The impedance is really not a concern for receive only -
so I would use RG6 - at least dual shield. (Available at almost
any hard ware store)

Rg58 is 58 ohm and rg59 is 75 ohm cable.
Rg58 is primarily used for ham radio and cb's
Rg59 is primarily used for cable TV.
If you want to know for general receiving they would not mater much.
I actually use rg6 (which is about the same as rg59) for a homemade
scanner beam since it was readily available plus it matched up to the TV
antenna transformer.

3130. Re: RG 58 vs RG 59 cable

Yahoo group: PCR1000
Date: 2004-12-05 04:12:08 UTC
From: John Taylor
Topic: 3127 Message: 3130

I'm not really wanting to get into a flaming battle here, but there are a few things you might want to know about the differences between the two coax cables you mentioned.

As one poster said, the RG-59 cable is commonly used in cable / TV hookups. Yes, RG-6 has better loss figures than RG-59 .... Both are 75 ohm coax.

As another poster said, RG58 is commonly used in amateur radio and CB. Well, that is true, but it is used in far more than that. The characteristic impedence of RG-58 is 50 - 52 ohms ... not 58 ohms. The biggest difference between the two types of coax are their "impedence" , or characteristics. A more conductive coax to RG58 is indeed RG-8 or RG-8X, both of which have the same impedence characteristics, but much less loss at the higher frequencies available to the PCR-1000.

These characteristics are derrived from the ratio between the diameter of the center conductor to the diameter of the outer conductor / shield.

Some think that it does not matter when used in a receive only situation. This is flat wrong. It DOES matter, however let me qualify that this way. IF you use a proper antenna with a "known" impedance, the you should feed that antenna with as near as possible a match as possible to transfer as much energy as possible between the two. Any mismatch will in fact reduce the amount of energy transferred between them. This also applies to the radio device that you are feeding. In this case, you have not stated which radio device you are using, but since we are in the PCR1000 group, I guess it is safe to assume that is the radio you are referring to. In that case, the radio is specified as having a 50 ohm antenna feedpoint, so RG 58 would be the correct match for this radio. Now, if the receive antenna is not a "matched" antenna of known impedence, the it probably is true that it does not matter.

I did not post this with the intent of sounding pompous or any such thing. The poster stated that they wanted to know the differences between the two and I have simply tried to answer their question as accurately as possible. Unfortunately, their question is a technical one so it required a technical answer. Sorry, but it is not always that SIMPLE to provide a simple answer.

To answer your question in simple terms, if you have a quality receiving antenna, don't waste it's value on going with the cheaper TV type RG-59 coax. Use a quality RG-58 or RG-8X and get all the

signal you can into the receiver.

3131. PCR setup on a boat

Yahoo group: PCR1000
Date: 2004-12-06 00:08:02 UTC
From: jpkumin
Topic: 3131 Message: 3131

Hello everyone:

We just got a PCR1000 from a friend who upgraded to an ICOM M-802 for his boat. It came with the one disk of the Radiocom 4.5 software (the other was destroyed by water damage). We loaded the one disk and it seems to work, wondering what we are missing? Also came with a Metz 54" SS whip with a base loading coil that is marketed as a weatherfax antenna. We'll be installing it on our sailboat, at the moment playing with it at home too. Primary use will be downloading weather info. The unit appears less sensitive than dedicated units. For VHF reception it is noticably inferior to our Icom M-402, even when we plug the 402's masthead antenna in place on the 54" whip on the stern (which did help). Same with commercail broadcast, the AM/FM/CD player on the boat is way better. I tried the AM/FM antenna in place of the Metz whip and again things improved but still very inferior. I'm guessing that being designed to handle a broad frequency range compromises reseption compared to a unit made for a specific band.

So my main question is the 54" Metz antenna likely to be worth installing permanently for our projected use? The shrouds are bonded to the keel for lightning protection. Tried getting a signal from the lifelines / toerail will poor results - I'm wondering if they are also grounded and that drained the signal. Another option would be an insulated backstay but that seems excessive for receive only. I'd prefer to avoid hanging a bunch of wires in the rigging, like the dipole suggested in the Bonito manual. To date we have been able to get weatherfaxs from Kodiak (250 miles away), no luck yet with voice or RTTY. The original owner said his M-802 (with a 23' stern whip) outperformed the PCR when he tried both; he didn't swap antennas though.

Clearly the PCR likes to be grounded. At home I clipped a ground to the baseboard heat and reception improved noticeably. Tried running a grounding wire on the boat to a keel bolt and it made zero difference. The keel is encapsulated in epoxy, maybe that effectively insulates it as a ground for the low voltage "noise"? I am thinking of trying a bronze seacock next time.

Welcome any advice or thoughts from this group. Thanks!

From: w_suite
Topic: 3127 Message: 3132

I don't know how long any of you have had your PCR-1000 but from experience you need to use a 50 ohm cable as called for in the manual. In the earlier days of the PCR-1000 many people have found that using other than good quality 50 ohm cable resulted in their radios running "VERY HOT" when on for a long duration of time. Don't ask me why I can't explain it, but it happens. The PCR-1000 is very sensitive to the correct impedance antenna cable.

You do what you want its your radio, but just as I would not run my PCR-1000 from a wall wart instead of a very filtered external power supply I also would not use anything but the correct impedance cable due to the previous experiences of many past owners. Personally I use 40 ft of LMR-400 cable connected to a 20-1500Mhz Discone Antenna which is properly grounded.

Another concern is that some people just hookup a long wire antenna to the PCR-1000 for shortwave. This is a TERRIBLE MISTAKE and has FRIED THE GUTS OF MANY PCR's due to the static build up on the cable which ZAPS the front end of the PCR-1000 due to storms etc.

I have owned PCR's over the last 5 years and have yet to have one crap out, but I have had one over heat due to using the wrong impedance antenna cable and YES as soon as I replaced it with the correct impedance cable the temperature of the unit dropped dramatically. I can't explain why but it did.

Hope this helps.
Wayne.

Good learning experience.
Also there is a wealth of information on RECEIVING ANTENNAS AND FEEDLINE on the web.
As for the static problem my solution is unhook your radio in event of storms. I do.
I have not check the price of LMR-400 lately but I paid 58 cents a foot 6 years ago.

Subject: [PCR1000] Re: RG 58 vs RG 59 cable

I don't know how long any of you have had your PCR-1000 but from experience you need to use a 50 ohm cable as called for in the manual. In the earlier days of the PCR-1000 many people have found that using other than good quality 50 ohm cable resulted in their radios running "VERY HOT" when on for a long duration of time. Don't ask me why I can't explain it, but it happens. The PCR-1000 is very sensitive to the correct impedance antenna cable.

You do what you want its your radio, but just as I would not run my PCR-1000 from a wall wart instead of a very filtered external power supply I also would not use anything but the correct impedance cable due to the previous experiences of many past owners. Personally I use 40 ft of LMR-400 cable connected to a 20-1500Mhz Discone Antenna which is properly grounded.

Another concern is that some people just hookup a long wire antenna to the PCR-1000 for shortwave. This is a TERRIBLE MISTAKE and has FRIED THE GUTS OF MANY PCR's due to the static build up on the cable which ZAPS the front end of the PCR-1000 due to storms etc.

I have owned PCR's over the last 5 years and have yet to have one crap out, but I have had one over heat due to using the wrong impedance antenna cable and YES as soon as I replaced it with the correct impedance cable the temperature of the unit dropped dramatically. I can't explain why but it did.

Hope this helps.
Wayne.

Not a flaming war and you are correct BUT.....

About 20 years ago I saw a microwave installation that had the transmitter about 15 floors down from the antenna and the coax used was.....RG59. WOW. Convinced me that RG59 for a scanner was perfectly alright. If you really look at the specs of RG59 you will see that it does pass frequencies above 450 MHz much better than RG-58 anyway. Ever wonder why a PL-259 is sometimes called a UHF connecter. Above 450 MHz it doesn't work very well. Now look at the simple F connectors for RG-59.

Ever since then I have used Good R59, RG6, or RG6U without any problems even for lengths of 10o'. Most scanners will never know the difference between RG58 or RG59. You have to be darn careful that you don't overload a scanner's frontend and the prefect setup will actually be degraded to where you hear almost nothing.

My advice, use what you can afford and don't be ashamed if it's only a good grade of RG-59. If you have a friend working for a cable company their cable is pretty good stuff.

Although my first impulse was to check this story with snopes(.com), I
did a pcr1000
@yahoo search of the archives using the words, "hot coax" and I did find
your posting
of today, but that was it. I also checked the icom_pcr-1000 group with
zero results.
Also, the same results with google, A9 and teoma. Right now I have a
thin film
thermistor on my radio and a 74 ohm token ring terminator on the antenna.
84.4 degrees. F. What puzzles me more, what happens when an antenna
tuner is
half tuned, and the impedance for your particular frequency happens to
be 80 ohms?
Will the radio get hot?
And good quality coax? I can think of 5 or 6 parameters that makes coax
good,
some of them suggest 72 ohm cable. Which ones are the most important?
As far as power supplies go, I did the 12V jump-start battery for about
six months,
recharging the battery with the Icom supply. After having the battery go
dead a couple
times, I haven't bothered lately. The grand scheme was to be able to
use the PCR if
the power went out, with my laptop. A RadShack scanner is more energy
efficient.
I will congratulate your comments about using a long-wire into the
PCR. A lot of
friends have lost modems to static discharges, since analog phone lines
are balanced,
instead of coax shielded. I've been using a home-wound 10:1 balun on my
longwire,
those that are smarter than me have purchased a Winradio longwire
adapter or
Palomar Engineering LWA for around $50, getting a spectrum tested device.
Also some lightning facts:
http://www.straightdope.com/columns/040827.html
73 and long live your radio,

3137. Re: RG 58 vs RG 59 cable

Yahoo group: PCR1000
Date: 2004-12-06 05:10:43 UTC
From: John Taylor
Topic: 3127 Message: 3137

Sorry, but I just have to respond to this portion ....

You may have indeed seen RG59 run as part of a microwave
installation 20 years ago, but there is a bit more to the story than
that. I have in fact installed many of those microwave systems using
RG59 and/or RG6 as the cable between the controller and the
microwave transciever/dish. It must be pointed out so as not to be
misleading that the coax run between the controller mounted 15
floors down and the transciever assembly is carrying the "IF" and
not the microwave fundamental or licensed carrier frequency. That IF
is usually at around 70 mHz or so.

It is misleading to imply that the RG59 or even RG6 was carrying
microwave frequencies over the distance of 15 floors and then
transmitting / receiving to a far-end station. The path loss would
be totally unacceptable and intolerable to any RF path engineer that
knew what they were doing, regardless of the type of connector used.

As for RG59 being perfectly alright for a scanner, you are probably
correct in most cases, however that was not what the original poster
asked. The original poster asked "What was the difference between
the two" and stated that RG58 had already been recommended. Maybe I
incorrectly assumed that the poster wanted to know something other
than what they asked, so if that is the case, you are probably right
about it basically making no difference.

Been reading the comments about coax and had to comment.

1. The changing impedance of the coax will not have any effect on the operating temperature. Been there, done that, did the testing and there is nothing to substantiate this claim. If this was a transmitter, and the SWR was very high, it's possible that over time this might generate some extra heat. Though, most transmitters will fold back the power to preven high SWR damage. How this story got started baffles me, but for receiving purposes you aren't going to see any difference. I've made some fairly elaborate measurements several times, at frequencies from 30 - 1000 mhz with virtually no difference.

2. With many receivers, using a good antenna with low loss coax can cause problems. Pumping that much signal into a puny front end can easily cause overload and intermod. In such cases, using coax with some loss can actually act as an attentuator and alleviate some front end associated problems.

First, I agree that the impedance of the coax for receiving purposes is
not that much of a concern.

And we know the dynamic range of the PCR is low, however I can't be
an advocate of bad or lossy coax.
That is a job of an attenuator. Just because the antenna is 'powerful',
don't shoot the messenger.

I agree 100%. I live in Bergen County in NJ.

It's probably only 2nd in RF density to NYC. I installed a discone, hardly a gain antenna, fed with 9913. Most scanners were useless as I was receiving more intermod than valid signals. Just for the heck of it I replaced the 40ft of 9913 with 100 ft of RG-59 - no more intermod!

There's no doubt that I'm getting less signal but in this case less was more. For anyone reading this, there is no substitute for good coax and good antenna as high as you can get it.

3141. TalkPCR

Yahoo group: PCR1000
Date: 2004-12-07 22:52:57 UTC
From: Ian
Topic: 307 Message: 3141

Have others experienced significant computer instability using TalkPCR and Windows XP/XP Professional? I have had numerous complete lock-ups and "program not responding" errors requiring complete shut down using the power switch and a cold reboot. This occurs most commonly when I use the "Search" function. First the programs locks, mouse goes dead and then everything refuses to change or shut down using the keyboard.

Bonito does this sometimes, but there it really barfs. It results in the operating system dropping to DOS and trying to do a memory dump. It, too, requires a cold boot to recover.

I have a hunch that part of this may have something to do with the USB part of the program. I'm not a "byte wizard" so that's only a guess, but it seems that the USB ports tend to have problems with their programs.

I believe that the reason that TalkPCR is no longer "supported" is that it's just too time consuming to do all the debugging required for each and every operating system version that comes along.

I've had TalkPCR running 24/7 for over a year on an install of XP Home on a Via ITX computer that is also a home mp3 server and webcam uploader. Never a burp.

Only difference is that this is on a real serial port, I do find USB to serial adaptors lacking, some are good for syncing a Palm Pilot and that's about all. If it's a desktop PC with no serial ports, try a PCI serial expansion card.

My two 'serial adapters' were nightmares. I sent everything back and found a notebook with a serial port. I understand that USB timing is much more lax than serial protocalls and sometimes characters get fragmented. Have you dropped the baud rate to see if that helps?
I understand that Pete's issue happened to be the ratio of paying customers to non paying 'customers'. So he just gave up.

I've been using the same spanner (Belkin USB adaptor) with a laptop,
windows 2000 and xp pro with no ill effects! :)

I think this dilema is a bit deeper than home or pro versions of XP. Look
more into the hardware aspect, such as cpu/bus speed, USB type, and perhaps
compatablity with other serial products, such as GPS.
One observation I had using TalkPCR. When doing simple scanning of 4 or 5
frequencies, my Task Master process window showed TPCR as using 70% of my
3.06GHz P4. That's with TPCR's HOG CPU option 'OFF'.
Perhaps scanning interferes with the cpu's ability to properly run the adapter.
That can be checked by going to the Task Master's Process tab, doing a Right
Click on TCPR.exe and setting priority to low. That may give the adapter some more
cpu time, when it wants it. Also, if you can spot your adapter's task, give that a bump
up, with a right click and select priority.
Good Luck. I know the frustration.

From: Paul Lewis
Topic: 3146 Message: 3153

Guys,

For information I use a Toshiba Satellite Laptop with Windows XP Home operating system. Wanting to run TalkPCR with my Icom PCR1000 I started to look round for a USB/serial adapter and found the following site http://pfranc.com/usb/usb.mhtml . Having read the reports I purchased the USBdb9m cable @ ?25.95 inc from http://www.lynks.co.uk/usb.html. After fitting the converter and installing XP drivers I ran up the system and found a com# conflict caused by XP allocating the adapter an in use com#. Changing the adapter com port sorted the problem. TalkPCR & PCR1000 have worked perfectly since then. I am sure there are many other suitable USB/Serial adapters available but thought others may be interested in this converter and my experience.

Regards

Paul

3154. Re: yep use the serial port

Yahoo group: PCR1000
Date: 2004-12-08 22:06:11 UTC
From: g8jxa_sw
Topic: 3146 Message: 3154

Think the problem may be the USB host chipset (in the PC). My
experience is that Intel chipsets work well, VIA chipsets are very
unstable.

If you have a desktop and a problem, go buy a PCI to USB board with
Opti, Lucent or NEC. Avoid any board with a VIA chip.

Running TalkPCR on two desktops and a laptop using Opti boards or
Intel chipsets without any issues.

3155. RadioCom 4.5

Yahoo group: PCR1000
Date: 2004-12-08 22:34:31 UTC
From: jpkumin
Topic: 3155 Message: 3155

Hi, trying again. My used PCR1000 came with two Radiocom 4.5 CD's, water damaged. One had lost the silvering, the other loaded OK. The radio / laptop seems to work, what am I missing? Using a USB / serial converter incidently without problem with XP Home.

It also came with a Metz 54" SS base loaded whip, marketed as a weather fax antenna. Anyone have experience with these antennas? Will be using it promarily for weather information; fax, voice, Navtex. Thanks....

3156. Preselector or Tuner/Amp???

Yahoo group: PCR1000
Date: 2004-12-09 00:38:53 UTC
From: Mike
Topic: 3156 Message: 3156

Hi
Can anyone tell me what the difference is between a "pre selector"
and a "tuner/preamp"
I have a PCR-1000 receiver and a 75 foot slope wire outside.
I was wondering if an MFJ1045c
http://www.mfjenterprises.com/products.php?prodid=MFJ-1045C

or a MFJ959c
http://www.mfjenterprises.com/products.php?prodid=MFJ-959C

would inprove my reception at all.

Any info would be great.
Thanks
Mike

I would go with the preamp/antenna tuner 1020c MFJ.
personally I've been messing around with long wire antennas for a while but,
a preamp will work wonders. A antenna tuner will help match the signal
strength to the PCR. The MFJ 1020 is the cure I think.

good luck
radio is an expensive habit.....

A preamp/tuner - also helps isolate the front end of your
radio - so if you do get zapped - more than likely take
out the preamp - and the PCR1000 will be OK.

3160. Controlling radio using TCP/Com Software

Yahoo group: PCR1000
Date: 2004-12-09 04:47:11 UTC
From: Steve Biddle
Topic: 3146 Message: 3160

Has anybody out there had any luck controlling their radio remotely
using TCP/COM software (http://www.taltech.com/products/tcpcom.html)

This software allows you to control a serial port remotely from another
PC and create a virtual PC on the controlling PC so it will function
transparently. I have used it for several other applications fine but
have been unable to get it to function with my PCR100. Has anybody out
there had any luck using this software or used any similair applications
seccesfully?

Thanks.

Reading the other answers you got, (who are slightly wrong), I have to post the correct answers to your question, but first.

A preamp does not isolate the receiver in case of lightning, but may reduce the risk of burning the front end of the receiver depending on the current flow in the lightning.

Second, the answer to our question:

The difference between the antenna tuner and the pre selector is:

The antenna tuner works like this:
It matches the impedance of your antenna (or in most cases; your antenna and the attached feed line) to the impedance of the receiver. The impedance of the receivers is usually 50 ohm. Some receivers like the IC-R75 and others have an additional high impedance antenna input as well.
The antenna tuner DOES not improve the signal-to-noise ratio.
Antenna tuners are mostly used to match the impedance of an antenna (and its feed line (depending on where the tuner is placed)) to the impedance of a transmitter. Due to this, most antenna tuners available are aimed at the radio amateurs.

The pre selector works like this:
It filters out noise and radio stations sending on other bands than your receiver and pre selector is presently tuned to. The pre selector and the receiver must be tuned to the same frequency band. The pre selector prevents the front end of the receiver from being overloaded by out of band signals.
The pre selector may have a significant improvement on the signal-to-noise ratio.
(This depends on the cause of the degraded signal-to-noise ratio.)

Third:

The ICOM IC-PCR1000 is more than sensitive enough, so a preamp is not needed, it will probably only cause intermodulation, overloading of the front end and add noise. You should go for the pre selector.

Hi, Steve
Not quite familar with the software package you mentioned, however a lot of people
have been having a GREAT time with Bob Sillett's ShortWaveLog(.com).
Also , there is a yahoo group called http://groups.yahoo.com/group/swlog/
I think there are 2 active receivers on line right now.
This package not only allows you to control remotely, it also returns the auto
in streaming fashion.
Get ready to hold your hat and
have a good day!

The link below is for the MFJ-959C, which is an antenna tuner, and the T network is used for transfoming the impedance from one side of the circuit to the other side of the circuit. LC series network, commonly used in pre selectors is a band pass filter who attenuate signal outside the band, and don't attenuate the signals in the band.

I have been using PROBE1K since it's first release several years ago. Everyday the first thing I do is turn on my Toshiba Libretto PC (100 MHz Pentium processor) and start PROBE1K. The software is super on normal VHF/UHF scanning and will allow the PRC1000 to scan up to 44 channels per second. Multiple priority levels with many control functions that can be manipulated with the software allow you to do things with this radio that are not possible with any other radio unless you are using the Original PROBE written for the older Radio Shack Scanners.

This is a DOS based program and will run on the older computers that can be purchased on E-Bay or maybe one sitting in the garage. Older used laptops are a favorite so the computer can be dedicated to the radio. I have also run PROBE1K and PROBE with Windows XP SP2 but another program called DIRECT I/O is necessary to assist in the proper control of the serial port.

If you want to use the PRC1000 for normal VHF/UHF scanning no other program functions as well as PROBE1K, not even TALKPRC.

3172. Packet 9600bps

Yahoo group: PCR1000
Date: 2004-12-14 17:43:03 UTC
From: Mike
Topic: 3172 Message: 3172

Hi
I am new to using this scanner.
I was wondering what this Packet 9600bps is for on my PCR-1000.
Can this plug into my sound card to decode stuff?
If so what hink of stuff and what frequencies?

Any infor would be great
Thanks
Mike

3173. Good deal on last PCR-1000 at Grove Enterprises

Yahoo group: PCR1000
Date: 2004-12-14 18:22:48 UTC
From: Tom Rohrs
Topic: 3156 Message: 3173

Just spoke to someone at Grove about another matter and she indicated that there is a brand new PCR-1000 in "Bob"s Bargain Bin".

http://www.grove-ent.com/hmpgbbb.html

It's going for USD 299.95 plus shipping.

-Tom-

3174. Re: [PCR1000] Good deal on last PCR-1000 at Grove Enterprises

From: nt1g@comcast.net
Topic: 3156 Message: 3174

It is a bit curious.Grove has NO PCRs listed; Icom hasn't removed it from their page.
Universal Radio shows them for $499. They were going for $275 before Icom decided
to force bonito on their customers. I guess procrastinators lose.
There has to be a replacement. I've heard that every Predator flies with two of them.
(And that's just one country)

Yep..bought one myself a couple of months ago. Limited numbers.
excellent delivery time and great staff. cell unblocked too :)

3177. Re: Packet 9600bps

Yahoo group: PCR1000
Date: 2004-12-15 00:35:37 UTC
From: Robert Downs
Topic: 3172 Message: 3177

That output is the same as a scanner tap for broadband audio before its filtered. Along with a data slicer you can feed a motorola or edacs control channel audio from the 1000 to the data slicer pluged to a serial port on your computer and decode the information. Also with a second receiver for following the audio you can trunk a system. Programs are available called Trunker, ETrunker etc. depending on what type of system your monitoring. Also there are a few programs that use the sound card only. Its also used for Packet transmissions on the ham bands.

3179. BandScope

Yahoo group: PCR1000
Date: 2004-12-15 11:14:25 UTC
From: freshradioham
Topic: 3179 Message: 3179

I am running a TalkPCR 2.92 version on Window 2000. Every thing seems O.K. except that the band scope does not work at any band any mode. When I click the "BS" button, a window pop up with scale and pull down manuel and nothing else. When I use the original ICOM software Ver. 2.2, the band scope is alive. So the hardware seems O.K. but the TalkPCR has problem.

Anything or setting can fix this problem ?

Thank in advance.

3180. Re: BandScope

From: fhub55
Topic: 3179 Message: 3180

If you´re using this ´Lucid patch´ for TalkPCR 2.92, then _that_
will be the reason! (it´s a quite bad crack)

You should better use the freeware version 2.4F2 (or also 2.99)
and your bandscope problems will go away ... :)

Topic: 3182 Message: 3182

Thanks for all the info everyone has given me so far, its been a
great help.

But now I have another question....

I just bought a USB to RS232 plug for my laptop.
When I start the Icom software it gets a come error. I am trying to
figure out how to set the USB port up to work with this adapter.

I am running XP
Any ideas?
Thanks again
Mike

3183. Re: PCR1000

Yahoo group: PCR1000
Date: 2004-12-17 16:13:50 UTC
From: John Taylor
Topic: 21 Message: 3183

Sorry Ron, but this receiver can only listen to one frequency at a time, and the "scanning" function is a matter of the software you are using. None of the different software packages I am aware of has the ability to activate more than one memory bank at a time, although some of them do have "larger" banks than others. This would allow you to possibly build the "perfect" bank from selected channels from your most desired frequencies. Still, the PCR1000 can only monitor a single frequency at any given instant, and scanning is merely listening to each frequency in your list in sequential order.

I hope this answers your question ....

3192. RadioCom 4.5 delete?

Yahoo group: PCR1000
Date: 2004-12-20 06:38:17 UTC
From: jpkumin
Topic: 3192 Message: 3192

Hi:

When I try to delete the (unusable to me) pre-listed stations that came with the RadioCom software to get a more easily used list, they won't go away. Instead if anything, they get replicated so I end up with pages of duplicates of the same stations. This seems worse on the new ones I put in. Anybody have similar experiences, have any advice? Thanks.

I would start with the antenna to see if it has not
come unplugged, broken cable or connector etc.

Then open the squelch all the way to see if it stops
scanning.

Check your attenuation settings.

I don't know if you've tried any of these or not, you
didn't state.

Good Luck...

Try a different COM port. While my pcr seemed VERY DEAD
a few weeks ago, it behave properly on COM2, and OK when I switched
back to COM1. Also, unplug your radio(from power) for a minute or 2
while you reboot your computer.
And, try to find another serial cable.
Good luck! And happy holidays!

Hope you didn't wipe out the 'front end' with a static discharge. Long wire antennas seem to have the characteristics of a lightning rod- and discharging pre-strike static clouds into your radio. Loop antennas and BALUNS (notice the ones on MOST outdoor TV antennas?) bypass the coax to send the charge to ground-if you're using an outdoor ground. LongWireAntennas deliver that charge straight to the front-end of your radio. Do a visual around the antenna connector area. Are all the components intact?
Does it smell funny?
Another thing I do while troubleshooting is remove the audio cable from the radio, and use the radio's speaker. That's the quickest way to detect the radio on. I've had the audio muted, or speakers turned off and gone into panic mode before.
73,
Skip

Bill,
I've not used recall pro to record audio with the PCR1K, however,
I've used another program that was available commercially, (Best Buy
or CompUSA or if you have one in your area, Microcenter.) called
Sound Forge.
I configure the Audigy 2 for a front input audio from the PCR to
record the various items that come in, and discard those that I
don't care for. Sound Forge also allows for you to do some serious
editing work as well. Works on XP Pro, Win2K and 98/98SE.
I've not used Probe1kV7 with the PCR1K *yet* but I'll do a search
and see what that program is about.
I have 2 of the PCR's and have used them literally all over the
world. (those that are in Chicago, can use the DTMF decode feature
to "track" the CTA busses that are in Emergency Alert. do a search
on their assigned frequencies via the FCC data base, turn on the
dtmf decode, and if you see the xx-xxxx-xxxx number string come up,
the second set of number string in the vehicle ID. This times out
every twenty seconds, and you'll hear the covert microphone audio...)

I had a similar problem that you describe,turns out that for DC->30 Mhz work I had the antenna switch grounded. (I run multiple antennas through a switch with a "blitz bug" suppressor in line to the radio). Another thought might be that your eeprom could have become corrupted, but, be careful there...only way to revive the PCR is to reload the original eeprom image, or send it back to ICOM.

I have to second the recomendation on SoundForge. I've never used it to record directly but have used it for just about every other audio editing chore and found it to be very useful. I have used it several times to cleanup/splice recorded audio from scanning. As an audio tool it is remarkable.
C.Dust

dvd_lvtt <acatherder@...> wrote:

Bill,
I've not used recall pro to record audio with the PCR1K, however,
I've used another program that was available commercially, (Best Buy
or CompUSA or if you have one in your area, Microcenter.) called
Sound Forge.
I configure the Audigy 2 for a front input audio from the PCR to
record the various items that come in, and discard those that I
don't care for. Sound Forge also allows for you to do some serious
editing work as well. Works on XP Pro, Win2K and 98/98SE.
I've not used Probe1kV7 with the PCR1K *yet* but I'll do a search
and see what that program is about.
I have 2 of the PCR's and have used them literally all over the
world. (those that are in Chicago, can use the DTMF decode feature
to "track" the CTA busses that are in Emergency Alert. do a search
on their assigned frequencies via the FCC data base, turn on the
dtmf decode, and if you see the xx-xxxx-xxxx number string come up,
the second set of number string in the vehicle ID. This times out
every twenty seconds, and you'll hear the covert microphone audio...)

For some decoders it is required to hook the discriminator out to the line in.

Subject: [PCR1000] RadioCom 4.5 delete?

Hi:

When I try to delete the (unusable to me) pre-listed stations that came with the RadioCom software to get a more easily used list, they won't go away. Instead if anything, they get replicated so I end up with pages of duplicates of the same stations. This seems worse on the new ones I put in. Anybody have similar experiences, have any advice? Thanks.

Here is what I did to solve this problem.
Using Windows Explorer copy C:\Program Files\Bonito RC45\DATA\FrqData.DAT to another name such as FrqData.OLD (just in case you want to go back to it). Open FrqData.Dat in an editor like WordPad do a EDIT>SELECT ALL then EDIT>CLEAR and FILE>SAVE. Start up Bonito and everything has been cleared to a virgin state.
You can make many frequency lists using this method and giving each a unique name and switch to them by renaming the file name since Bonito only recognizes FrqData.DAT

Ted:
Thanks - that worked perfectly. You seem familiar with RadioCom
4.5, in an earlier post I'd asked about the two program discs that
came with it. I bought my PCR1000 from a friend off cruising and
one of the two CD's he sent with the radio was water damaged and not
loadable. The remaining disc booted up fine and the radio seems to
work OK. What is on that second disc? Help files? (I don't seem to
have any). Thanks for the help with the delete.

3212. Zire21 and PCR1000

Yahoo group: PCR1000
Date: 2004-12-27 17:28:30 UTC
From: David Guretzki
Topic: 3212 Message: 3212

I have been able to successfully install JJ's IP1kC program on my Zire21.
Now I need an appropriate cable to connect the Palm Zire21 to the PCR1000.
Will a simple mini-USB to DB9 adapter cable be enough? What is the proper
way to do this?

Thanks for your help!

3215. Com Port switching

Yahoo group: PCR1000
Date: 2004-12-28 17:03:01 UTC
From: jpkumin
Topic: 3215 Message: 3215

I downloaded and installed the ICOM software as suggested by Skip. Works fine, I had to toggle Com Port 5 to get it connected. RadioCom 4.5 was using Com Port 1. Now to use RadioCom 4.5 I have to select Com Port 1 using the Icom software, and then re-boot the computer to get it to recognize the new Com Port, otherwise it won't communicate with either software. I had been trying Dx'ing some weak stations to see if there was any comparative advantage between the Icom and RadioCom software but the time it takes to switch makes comparisons difficult.

Any suggestions on how to set things up so the Icom and RadioCom software can stay on the same Com Port, or work without this switching? I am running a RS-232C to USB converter on a Toshiba with Windows XP.

Hi ...,
I just downloaded the Icom software, installed it, and had a
bit of trouble (bit is a keyword). Upon opening, a little
Comm window opened, set to port 5. I reset it to port 1.
And the software wouldn't work. Hmmm.
So, I opened my favorite TalkPCR. That was fine (and set
for port 1). So, I went back to Icom's program. This time,
the comm window opened up to Comm 1, and the software worked.
Perhaps that window doesn't reset the Comm Port immediately,
but on starting the program.
Hope this works for you... if not we can try something else.
Have a Great New Year!
Skip, NT1G
Hull, Massachusetts

Get another usb to serial converter and set each radio on a different com port. Then you can run both programs at the same time. I control an Icom R8500, two BC785D's, BC796D and a Pro2052 all at the same time. Only using two real comports, the rest are on usb to serial converters.

3219. PalmVII and PCR-1000

Yahoo group: PCR1000
Date: 2004-12-29 07:19:34 UTC
From: Douglas Junge
Topic: 3219 Message: 3219

Hello -

I've been trying to use my PalmVII to control the wonderful Icom scanner. So far I downloaded IP1kC onto the Palm and connected the cable from the Palm cradle to the scanner using a gender changer. I can see the IP1kC page on the Palm but no noise is coming out of the scanner. I've been using it with a laptop and it works fine then. Big question: How to connect the PAlm to the PCR-1000. Should there be an adapter between the cable and the serial port? There seems to be one in JJ's photos (www.geocities.com/jjintokyo).

Any suggestions will be appreciated.

Doug Junge

mine connects directly from the PCR1000 to my Palm M130. I have not been able to get that program to scan. I have followed the instructions on the site but no luck. I emailed the author with no reply. Let me know if you get it to scan.

Subject: [PCR1000] PalmVII and PCR-1000

Hello -

I've been trying to use my PalmVII to control the wonderful Icom scanner. So far I downloaded IP1kC onto the Palm and connected the cable from the Palm cradle to the scanner using a gender changer. I can see the IP1kC page on the Palm but no noise is coming out of the scanner. I've been using it with a laptop and it works fine then. Big question: How to connect the PAlm to the PCR-1000. Should there be an adapter between the cable and the serial port? There seems to be one in JJ's photos (www.geocities.com/jjintokyo).

Any suggestions will be appreciated.

Doug Junge

The cradle electronic has the neccessary RS232c interface.

As the cradle is a device that's supposed to be connected to a PC/terminal, and the pcr1000 also is a device connecting to a PC, you'll need a null modem adapter and perhaps a gender changer to connect the two. If you make your own cable you can roll both null modem och gender change into the one and same cable.

Ubbe.

You can't connect the palm directly to the pcr-1000, you'll need an interface to sort out the voltage levels.

The cradle have the proper interface, even the USB cradle, but you have to solder the serial cable into the cradle yourself but the holes and marking on the circuit board are already prepared for you.

Ubbe.

The AES price seems like a GREAT deal.
HRO is offering the PCR-1000 for $489 & free shipping.
I paid $337 30 months ago from HRO.
Of course, Bonito 4.0 was the worst part of the deal.
The WinRadio WR-313i is looking better and better...

The talkPCR yahoogroup was several copies of TalkPCR available in the 'files' section. Otherwise, since TalkPCR is in the public domain, try to find a copy that does away with the 'nag screen'. Nag or not, any version will copy, store and re-install the eeprom 'map'.

Hi Bob,

I used to have a PK-96 and I don't remember a 1/8 mono jack for receive audio, but receive audio can be easily applied at the 5 pin DIN connector. Pin 2 is the ground/shield and pin 4 is the receive audio -- this is the standard TNC2 connection. Radio Shack probably has the 5 pin male DIN plug, shielded audio cable and 1/8 mono plug.

The computer side is a standard 25 pin RS-232 cable -- also available at Radio Shack. Windows Hyper Terminal works OK for the software.

I highly recommend that you get the manual for the PK-96 -- $12 on CD from Timewave:
http://www.timewave.com/
You will need to read the manual! :-)

From: nt1g@comcast.net
Topic: 3231 Message: 3241

Yes, that's how I use my PK-232MB.
Another solution might be finding a software package that can decode
the packet signal without the 'hardware' decoder.
Just for good practice, try to find a 'shielded' audio cable. First to look for,
a single conducting 'cord'. (Not two wires, side by side.) Another good
indication is the plugs are metal, not plastic. This is more important if you
are transmitting, and that's not using the PCR-1000. If I get unlazy later today,
I'll dig out (not too far from the truth) my PK-232 manual and look at the audio
interface options. But for the most part, I've plugged a handietalkie into the PK-
with simple cables, and I've also used a 8:1000 audio transformer to isolate the
grounds- since the HT was battery powered. But it was last used with a straight cable.
Since you're not XMITing, things should be easier.

Skip,

Thanks for the info. I should be able to find a good 1/8 mono cable from the shack and will give it a try. I checked with timewave and the price for the manual has gone up to $15. That sounds pretty high for just a manual, but I may need to purchase.

Thanks again for everyone's help!

Robert

Yes you can, its the same with a PK232 which has two ports. One for
VHF and one for HF. If the PK96 has an audio in jack you can use it.
That is the way I have my R8500 and PK232 set up.

You send standard ASCII characters to the pcr1000. Any program of your choise should be able to send plain text characters.

Ubbe.

I cannot address TalkPCR, but my Radio Control Server (RCS) program is written in C#.NET and uses .NET Remoting, so you definately can write your own VB.NET program to talk to it.

What sort of functionality are you looking for? My .NET Remoting interface currently lets you query the receiver and S-Meter value and set the frequency, mode, filter, and squelch. It works with the PCR-1000 and 12 other receivers.

I also have a command-line application that uses the .NET Remoting interface.

Hi Douglas,

You will need a Null Modem adapter to go between your Palm VII and the
PCR-1000. I am doing the same here but I use an older Palm100 and it
works
fantastic.

From: mywhen
Topic: 3251 Message: 3251

I need your advices buddies...

I just have joined the group and i start to learn the base.

So, Hello everyone and happy new year!

1) I'm looking for the program MacPCR wich is no longer available @
http://homepage.mac.com/twautele/

2) I have an Icom PCR-1000 and a Mac with wireless microphones use.

What i want to do is :

Scan UHF range for not desired RF signal and other operations in relation.
may you give me ideas .. ;))

- is some of you are using Mac? Can you share your experience?
- what do i need to connect the pcr with the mac correctly?
- is MacPCR worth? is it the mac version of talkPCR?
- so what soft do you recommend? MacR-1000?

thank you all

mywhen

Hi,

I use MacPCR (free) without any problem. I can send you directly if
your ISP can handle a file of 812K.

There is another program - MacR-1000 (shareware) which is also nice.
you can find it at -http://software.manoverboard.org/. unfortunately, I
could not register to this program trough my mac...
I wrote the author but did not received any help from him.

I'm not aware of other programs for Mac.

Regards,

Niki

3253. PCR BNC connection.....

Yahoo group: PCR1000
Date: 2005-01-07 13:07:18 UTC
From: tasemaro
Topic: 3253 Message: 3253

Hi there,

Does anyone know what lives at the end of the antenna input in the PCR1000? What I want to know is if the 1st stage is DC isolated from the aerial connection or does it go straight to an amplifier.

Why do I need to know this? Simple! I want to arrange for the PCR1000 to supply +12 to a masthead pre-amp (via a suitable fuse and inductor of course). The pre-amp is needed for NOAA satellites before anyone asks.

It would seem reasonable that it is DC isolated to prevent damage from stray static but it would be nice to have this confirmed without having to dismantle the black box!

Cheera!!

John

There are 2 caps between the BNC and 'attenuator circuit'. .1 and .001 uf.
in parallel.
If you are really curious, a voltmeter should show NO dc voltage when the
power is on, and NO resistance when the power is off. (Actually the power
switch's position shouldn't matter in either case.) I used a 510 ohm resistor from
the power jack.
Cheera!

Thought as much - you didn't use a nice inductor then (to stop the RF disappearing into the 12V supply)?

No, I didn't... the circuit I stole the concept from didn't either.
(doesn't mean that it's correct) I'm actually using two different
antennas, and the resistor is on a ez-hook , for a pre-amped
long-wire or TV antenna. My low frequency antenna uses a 10:1 balun,
so the 500 ohms isn't used, but you are correct-
a 1 mH choke should be used- that's about 40 turns of 24 ga.
around a FT82-42 ferrite toroid, if you can't find an 'old fashioned'
axial lead choke.
But, if you can't find one, the plain resistor works without much
trouble.

I love the program and have the freeware version. How do I get rid of the pop-up message that shows up every 5 minutes?

3261. Radio Shack Discone question

Yahoo group: PCR1000
Date: 2005-01-07 22:37:16 UTC
From: Mike Visniewski
Topic: 3261 Message: 3261

I've heard from many people that the radio shack discone is the best antenna for general scanning with the PCR-1000. I'm thinking of finally upgrading from the stock telescoping PCR-1000 antenna. My question to anyone who has one is: when it is fully assembled, what are the dimensions of the antenna? What is it's overall height and how wide is the cone section? Thanks.

Go the group "TalkPCR" on Yahoo and download version 2.4 and the crack. They both are in the file area. Or send me your email address and I can forward them to you. This is about the only reliable way to get rid of the nag screen.

I know that TalkPCR was the cat's meow three years ago, and WELL worth
the $50 that Peter asked for it, the fact it's now DEAD should warrent looking
into some of the other TOTALLY free programs for the PCR-1000.
Ten years ago in the US, a lot of Yugo autos were given away, and still
overpriced. A couple of modern and FREE PCR-1000 programs are
HRD (Ham Radio Deluxe) and SWLog (Short Wave Log). These programs'
authors are available for any troubles, and continually improve their works.
I did pay the $50 for TPCR 3 years ago, with no regrets, but feel the above
programs are all of that, and more. I haven't used TPCR in the past month,
and some of the networking features (the ability to use my PCR-1000 from
any of my computers) surpass what TPCR ever offered. Without a nag.
Good luck and happy DXing

I have used both HRD and SWLog and to me thay have too much overhead.

TalkPCR gets the job done without all the bells and whistles while still giveing

the user plenty of versitility. I payed less then $50.00 for a registered copy of

TalkPCR and it was well worth it. Have had my PCR-1000 about two months

after it hit the market.

3270. RE: [PCR1000] TalkPCR 1000

Yahoo group: PCR1000
Date: 2005-01-09 05:52:55 UTC
From: Glenn Blum
Topic: 3266 Message: 3270

I am in the middle, for me all the available programs out there for the pcr are worth it.
Under my applications HRD and SWLOG are unique for HF.
Radiocom 4.5 is excellent for HF fax and NAVTEX reception.
Talkpcr I found great for scanning above 30 MHz and the search and spectrum analyzer are excellent for searching out active and hidden vhf/uhf frequencies. The ability to back up the EPROM is priceless!
SCANCAT (the older version) is a bit complicated but much faster in scanning than any other program I have. The speed makes it somewhat unreliable. The version was given to me and personally don□t feel it worth the price.
I hate to say this but when I am decoding something like ACARS or ALE I use the latest version of Icom's software. It's kind of like having a piece of scribble paper to throw down some simple stuff.
It just boils down to personal taste.

There is my two cents.
All you gent's have a good night

Not that I know of. The author of the program was supposed to come out
with a new version that was able to run EDACS but it never surfaced.
I became disappointed and instead I used the money that I set a side for
the program and went out a bought a trunk tracking scanner.
I heard the program is pretty good for Motorola systems.
There was a write up in one of the issues of Scanning USA magazine on
trunkpcr.

Hi Glenn

If I want to connect to a single lead another antenna, is it possible? I live in an apartment and had enough problems getting one lead into my work room. I was wondering if it is possible to connected a few antennas to the same lead with some kind of combiner up on the roof?
Thanks

3279. [PCR1000] Two antennas-One coax lead

Yahoo group: PCR1000
Date: 2005-01-09 15:44:48 UTC
From: nt1g@comcast.net
Topic: 3279 Message: 3279

The devise you're talking about is a DIPLEXER. (Not to be confused
with duplexer) They basically keep the two antennas apart from each other,
but shared with a common port (your radio).
Here's a schematic one you can build.
http://home.datacomm.ch/hb9abx/diplhf6m-vuhf.html
Other uses for them would be for a DirecTV dish and a VHF/UHF antenna.
The satellite dish output is 1500 MHZ- the TV antenna is 60-800MHZ.
So the two don't 'mix' and create spurious 'noise', a $10 filter is used,basically for the
same reason as yours- only one coax lead.
Now another type I saw at Home Depot was a non-frequency selective
device. These are called 'splitters'. I did notice the the frequency of both
ports were marked 5-900 MHz. They are used to run two TVs off the same
cable. They were in the $5 ballpark.
There is a LOT of applications for these diplexers.
Visit google and ask.

From: Jerry
Topic: 3274 Message: 3280

Yeah Glen, a year and a half ago the author led me to believe that an EDACS version "was just a few weeks away". For about 6 months, every month I'd send the author a "how's it going" email, and get the same "just a few weeks away" message back. Don't believe the "next version" pages, those have been there for over a year. It's all vaporware.

I even donated money to the cause. Only 30 bucks, but money is money.

Like you I ended up buying an EDACS scanner, the PCR is dedicated for other uses now. There's very little Motorola analog around the Denver area, so TrunkPCR has been deleted from my harddrive...

Jerry

Ummmm, No.... TrunkPCR isn't vaporware...

Hey Jerry!
Didn't I tell you about my Motorcycle accident back in March 2004?
If I didn't, well then now ya know... I was laid up for quite awhile from
that ordeal...
Then dealing with the insurance companies and lawyers to settle my claim
took
awhile... Then there was Jury Duty and other things that just took up my
time...

You shouldn't say my software is "vaporware!" when you don't know the what's
going on!!!
Anyway I've had a couple people testing the NEW Version starting a few
months ago...

If all goes well and I don't have any other distractions, I plan on start
sending out the NEW
Version towards the end of the month... Right now I'm working on a mailer
program to send out the
update through E-Mail since ICQ has had problems in letting their users edit
their homepages...

Regards,
Jay

Sorry Jay to hear of your accident. At least you're alive!
Yes I did go out and actually traded a few items to a buddy of mine and he handed me a new pro 92 trunk tracking scanner. It was never out of the box.
I very rarely use it because my wife loves it. I thought she can use it since she has relatives who work for the sheriffs' dept down here. Everything down here is edacs. Fort hood MP's is a big EDACS user and their service is provided to the by TXU energy. I am still interested in trunk pcr with the EDACS added.
Jay once you get the testing done let us know.
What do you have made new for the EDACS part of trunk pcr?
Will the new version of trunk pcr have the capabilities of decoding the control channel information? Some folks may feel this would be a plus to see the system information displayed. I was reading the set up for the older version and seen where you have to use the discriminator output, will this stay the same? I have incorporated a switch box that allows me to switch between sound out and discriminator out. I don’t want to get into great detail but "certain decoders" need the discriminator out to work well.
Jay I didn’t see you for a while posting on the pcr groups so I assumed that you were too busy with life or gave up on the PCR radio.
Jay I hope that you are back to 100%.

Glenn,

The new version does decode the Edacs control channel information and
displays it
like the Motorola Dump. And yes, it too uses the sound card for the data
source :-)
If you look at the pics of the new version, the Dump Screen and the Control
Channel Activity
will look about the same for Edacs & Moto....

Did you use a registry tool such as RegistryRobot; goto System,
and select System > Information> 'FIX OWNER and COMPANY NAME'?
Really, I think changing the registry name would be a lot easier.
Reloading the software won't help. Unless you 'wipe' the current HD,
and install a NEW O.S. from a MS cd.
After I purchased a few Toshiba Libretto CT110s from ebay, I had to
change those, too. I don't think Valued Customer is 'masked in ROM',
it's just that you didn't change the correct one.
Good Luck- I hope this will be the easier way.

From: nt1g@comcast.net
Topic: 3288 Message: 3289

Most likely the audio is running more, a discone is for vhf, and the
duty cycle is lower, due to the squelch.
If you DO believe it has to do with the antenna impedance, try the
ultimate test... run it for an hour with a 50 ohm terminator on the antenna,
then another hour with no antenna- you can't have a higher resistance.
Or, one hour with the squelch set on, then off.

3291. PCR1000 pricing

Yahoo group: PCR1000
Date: 2005-01-10 16:29:05 UTC
From: aarhus_ca
Topic: 3291 Message: 3291

Hi

After reading this group for a while - and checking out the
capablilties of the PCR1K - I decided to get one - I am especially
interested in Satellite Wefax (NOAA-14/15) and adding a front panel
(tinkering!)
Pricing in Canada ranged from $699 to $895 (Cnd). The US from $369 to
$595 (US) and an eBay listing is now $232 for a 5 year old unit
(http://cgi.ebay.ca/ws/eBayISAPI.dll?ViewItem&?Vie
wItem&item=5741583818
).
Burghardt has them for $374.95 - but also has full-warranty repacks
for $299.
Mail to Canada is $32.00. They have 2 or 3 left as of this post.
I have no connection with any of the above - just for general info

1- I've got a few of the PCR1000's on the internet with Linux boxes
controlling them. The program I use is "pcrd" which has been heavily
modified for my own purposes in what and how I control the receivers.

2- Wireless should be okay if you have ample bandwidth to handle the audio
streamming and control of the pcr1000 receiver.

3- Winamp has a few modules for shoutcast. I haven't played with the
microsoft version but am very happy with the Linux version of shoutcast.
It graps the audio from the soundcard and feeds an MP3 audio stream to any
client that you wish to connect to it.

Thru the Ethernet, past the Gateway, off the modem pool, nothing but NET .

To listen to the ANALOG cellular signals, you do not need
to "decode" anything. The ANALOG calls are not generally scrambled
in any form. Just tune to the right frequencies. There are over 600
of them. The ANALOG signals are simply narrow band FM. If you are
hearing what sounds like the buzz of a digital data stream in an
analog system, it is the "Analog Control Channel" and it is of no
use to the ordinary listener. It is simply the "beacon"
and "control" for each cellular tower face. If however your cellular
carrier has made the step up to either TDMA or CDMA, you will not be
able to listen.
It must be noted here that your PCR1000 must be unblocked for
cellular frequencies. Those units manufactured to be sold in the
United States are "cellular blocked" and no software control
programs will bypass that. I think those units manufactured for sale
in Europe are not cellular blocked as this is only a US FCC rule.

If, on the other hand you are trying to decode the data stream of the analog control channel, that is illegal in most countries. The reason for this is that the data stream can contain both the cellular customers assigned phone numbers, as well as their uniquie equipment serial numbers. This is the data that phone hackers and phreakers are after. My guess is that this is beyond the scope of this forum, but I could be wrong.

I have HRD up and running and controlling a PCR1000 over a LAN, it
works fine over wireless.

Don't need to run HRD on the host (PC controlling the radio) only the
HRD remote module needs to run and it does not use many cycles.

I use Ivan Sorokin's program for audio;
http://phonesnd.com/
There is no compression so delay is minimized

From: Robert Sillett
Topic: 3293 Message: 3301

You can use my Shortwave Log suite of programs to control your
PCR-1000 over the network, be it a home network or the Internet.

You can directly control the receiver over TCP/IP or you can also use
a web page. For direct control, you can use a full-featured client or
you can use a command-line utility.

Here are two PCR-1000s that are currently on-line via the web:
http://remoteradio.kicks-ass.net/RCSweb
http://kc-hamnet.gotdns.com/RCSweb

You can use any audio streaming program that you wish, but the Windows
Media Encoder works very well if you are going to publish your
receiver to the general public.

You can download the program from
http://www.shortwavelog.com

Bob

3302. Re: Squelch Level

From: Robert Sillett
Topic: 3300 Message: 3302

I don't have the dBm figures, but the PCR-1000 returns 00 to FF in a
linear fashion, so you have:

0x00 = S0
0x10 = S1
0x20 = S2
...
0xA0 = S9+10
...
0xF0 = S9+60

As you can see, it's a very clean, straight-forward conversion.

Glad to hear you are looking into the WEFAX stuff. You might need to
be aware that both NOAA 14 and 15 are APT "inactive". Currently,
about the only NOAA birds transmitting APT is NOAA 17 and NOAA 12.
Although NOAA 15 is shown to be APT active in most databases, it
does not seem to be transmitting APT data.

from someone who is "in the business" this guy is
trying to decode an AMPS control channel... which
requires an NRZ or Non Return to Zero data input,
which instead of using a set voltage for a binary 1 or
0 .. for instance "normally" .. you would have 0 volts
being a binary 0 .. and +5vdc being a binary one.. or
+12vdc depending on the communications protocol being
used.. with NRZ .. it uses the highest voltage in the
sampling sequence as the high state(binary 1) and the
lowest voltage as low state (binary 0).

an example...

Logic 0 = +0.5 volts
Logic 1 = +5.0 volts

Logic 0 = -3.0 volts
Logic 1 = 0.0 volts

BOTH of the above are true..as examples...
this is NOT rs-232. just a way of encoding information

another thing I forgot to mention.. NRZ data has no way to "get rid of" bad data..there is no checksum.. you could theoretically have a string of 1 million binary 1's .. and not knowing what packet is which..which is the reason why a CLOCK line must be used as a time/packet reference.. do a search on "BANPAIA" and you'll see what he's trying to do.. it IS HIGHLY ILLEGAL in the United states.. but legal in most OTHER foreign countries.. if this guy is in brazil or portugal(can't remember which) than its very possible that its legal.. ALSO. here in the US .. VERY FEW PEOPLE STILL USE ANALOG!!! the problem is.. you dont need to use your phone in order for it to be tracked..all you need is for it to be ON! the phone will register with a tower..tx'ing a call,ACK'ing the response..and camping on the frequency..most US towers use channel 333 for this .. you can find the translation tables online if need be...

Agreed, but as this is not the moderated group, there
is very little that I or the group owner can do. We
have had the same problem with the people who are
looking for husbands/wives etc.

The only thing to do is to moderate the group, but
then if you do ban someone, how do you know that they
will not try to join using a different username.

Must admit, there has been no need to ban anyone from
the moderated group.

Cheers
Bill (moderator of the PCR_1000 group)

I'm no fan of cellphone companies, but the truth is, if you think they are thieves, don't do business with them. Maybe that means you can't have a mobile phone, maybe that means you have to be an amatuer radio operator and use repeaters and phone patches. But if they are providing a service and you think the plans/policies are not in your favor, don't enter into a contract with them. It's not as if they sneak in your home at night and steal your money.

maybe things are different in brazil.. but I work for
the largest cellular/GSM phone company in the USA,
owned by SBC(hint,hint) .. I'm intimately familiar
with the backend operations of the business,as well as
the infrastructure and the cost to implement and
maintain it. we do NOT steal from customers.. we
provide a service for a fee.. and we make PENNIES on
it... our true strength lies in the number of
customers,we have a large customer base and can charge
less money.. and make the same amount of money in the
long run..thats why smaller,Iden based providers..who
shall remain nameless..charge an arm and a leg for
their service.they have millions less subscribers than
we do,so they MUST increase the profit on each
sale/transaction.. which is why the "blipbeeeeeppp"
company's rate plans are so high.. its not robbery..
just a marketplace.....

end note.. this discussion is WAY off topic.. I
suggest we drop it...and just agree to disagree

-John,working for the big orange guy,KB3JKP

From: wxmonn
Topic: 3317 Message: 3317

Hello Group,

I am selling my IC-PCR1000.

$ 285, shipped mainland U.S. - like new w/ Manual, original box.

also to sell;

General Coverage HF Rcvrs.

-Kenwood R-5000

- Drake R8

Wish to sell any and all.

Please contact me off list.

Thank you.

Topic: 3293 Message: 3320

I have HRD up and running and controlling a PCR1000 over a LAN, it
works fine over wireless.

Don't need to run HRD on the host (PC controlling the radio) only the
HRD remote module needs to run and it does not use many cycles.

It's worth noting that HRD3 does not support PCR-1000 but the 3.1 beta from
December 23, 2004 does seem to. I just installed it and we'll see...

Thanks

From: Pres Waterman
Topic: 3293 Message: 3321

Works GREAT!

HRD3.1 beta in remote mode

NOTE! The documentation says to start the server with the command line
HRDRemoteSvr.exe - install HOWEVER you need only ONE space as such:
HRDRemoteSvr.exe -install

Windows Media Encoder 9 series: set encoder to broadcast an event and for
the client to request it, use FM quality audio, and port 8080 works well

in Windows Media Player (I am using 10) file... open URL and I put in
http://192.168.1.104:8080 and it started playing with about 10 second delay.
Your server's IP address will vary from that.

Next I will try serving over the INternet using DNS2GO from
http://www.deerfield.com

Sounds good too!

Thanks

From: John Taylor
Topic: 3315 Message: 3326

Although I have, and sometimes use WEFAX, I find that the one I use most is the WXtoIMG program. It does a lot more than just make a display of the raw data. It also can control the receiver (PRC1000) and can actually keep track of the satellites and download the images and process them all automatically without any human intervention. It has a built in satellite tracker and can update keps from within the program while running. I get great images using the PCR1000 and get to see sea temperatures and much more, as it also has several enhancement modes for the images, including built in map overlays based on your position. In my opinion, a fantastic program and so far, I have had great support from the author in New Zealand ...

NRZ data is "non-return to zero" data. The data pattern when decoded does not go completely to zero, and is utilized in QAM modulation schemes. (I may be wrong in this...do check to verify...)

John,
Absolutely correct! I forgot a whole bunch when I left Motorola...lol...been working on GMSK based data transmission systems too long!!
Cat
P.S. I sue one of the two PCR1k's for monitoring the data systems when I go out on the road or in the lab. (for viability of the signals we transmit. The program I've used so far for this task the Bonito program,ver 4.5. Since it is on my personal laptop, I don't let no one get on or near that laptop...)

3329. AIS Monitoring

Yahoo group: PCR1000
Date: 2005-01-17 08:46:09 UTC
From: Arcticpeak
Topic: 3329 Message: 3329

AIS Monitoring, more fun you can do with your receiver!

http://www.shipplotter.com/

ShipPlotter displays information about ships that are within VHF range of your position using the Universal Automatic Identification System (AIS).
AIS is a system that ships use to communicate their positions to each other as part of the global maritime safety system. From December 2004, all ships over 300 tons must carry an AIS system which broadcasts information about the ship to any suitably equipped receiver. AIS uses very short bursts of high speed data on two VHF channels in the marine band. The two frequencies used are 161.975 MHz and 162.025 MHz. Using a low cost radio scanner tuned to one or other of these channels and ShipPlotter software running on your PC, you will be able to see a radar-like real-time chart of all the large ships manoeuvring in your area together with information about their destination, estimated time of arrival and the dimensions of each vessel.

Enjoy!

3330. Program needed for monitoring of Elementary and Enhanced ATC Surveilance Mode S Transponders.

Yahoo group: PCR1000
Date: 2005-01-17 09:04:01 UTC
From: Arcticpeak
Topic: 3330 Message: 3330

The EUROCONTROL ATM 2000+ Strategy confirmed Enhanced Surveillance as essential to safely enable additional traffic growth. Therefore, in the face of continuing traffic growth, Mode S Enhanced Surveillance is planned for deployment in France, Germany and the United Kingdom. The foreseen mandate is March 2005, with a transition period until March 2007.

Enhanced Surveillance through the ground acquisition of specific aircraft parameters will enable the Controllers to increase their efficiency in tactically separating aircraft. The Controller's information is improved by providing actual aircraft derived data such as Magnetic Heading, Air Speed, Selected Altitude and Vertical Rate enabling to reduce the radio telephony (RT) workload and better assess the separation situations. Enhanced Surveillance enables Monitoring Tools and Safety Nets which work on actual data to be implemented or improved (MSAW, STCA) which in turn will allow safety levels to be maintained or improved despite the increase in traffic levels.

Mode S Enhanced Surveillance will entail the use of eight Downlink Aircraft Parameters (DAPs) for initial implementation and these are:

Downlink Aircraft Parameters

Magnetic Heading

Air Speed

Selected Altitude

Vertical Rate

Track Angle Rate

Roll Angle

Ground Speed

True Track Angle

Benefits

The implementation of Mode S Enhanced Surveillance will supports the following benefits:

Operational Improvements
The implementation of Mode S Enhanced Surveillance will supports the following operational improvements:
Automatic Provision of Airborne Derived Data to Enhance Ground Systems Functions including Surveillance
Use of Data Link to improve Efficiency of Communications
Use Aircraft Derived Data for Ground Based Safety Nets
Enhance ATC Decision Support by using Aircraft Derived Data

Maintain and improve the quality of surveillance

Safety Benefits
The safety benefits of Enhanced Surveillance accrue through the improvement of the Controller's situational awareness by:
Reduction in risk of communication error
Improvement of safety by provision of a more precise prediction of horizontal and vertical aircraft behaviour (i.e. monitoring of altitude changes and the execution of altitude clearances)
Improvement of safety in high density traffic areas through increased situational awareness

Capacity Benefits

Reduction of both Controller and Aircrew workload

Reduction of voice channel occupancy

Improvement of the capacity of pre-regulation (e.g. sequencing) in terminal sectors

Reduction of the Controller workload by reducing uncertainty concerning expected behaviour of the aircraft

Improvement of efficiency by allowing for more anticipation in planning of traffic

Read more about Elementary and Enhanced ATC Surveilance Mode S Transponders here:
http://www.eurocontrol.int/mode_s/

Just think about how fun it would be to have a program which can decode this information and display it on our computer!

Hi.
This site has al the information you need about AIS.

What is the Automatic Identification System (AIS)?
http://www.navcen.uscg.gov/enav/ais/default.htm

The range is Line-Of-Sight, i.e. if you can see the boat, then you can receive the AIS broadcast from that boat.

3334. Indoor antenna recommendation

Yahoo group: PCR1000
Date: 2005-01-17 22:04:47 UTC
From: J W
Topic: 3334 Message: 3334

Hello everyone...

I'm new to the group... I have a quick question..

What is the recommendation for a good indoor antenna, its not possible at this time to use an outdoor mounted antenna..

Thanks in advance

JW

Topic: 3334 Message: 3335

Depends on what 'spectrum' you're interested in. If it's mostly 'scanner',
then a TV type antenna covers that frequency.
If you want shortwave, mostlikely some form of 'longwire' or an 'active'
antenna. This type uses a FET preamp to 'transform' the impedance.
If it's AM broadcast (or below) you're probably better off with some
commercially built antenna. (This would incorporate a ferrite rod, or
a multiturn loop.)
But... anything would be better than the icom antenna.

Yes, since the PCR-1000 also uses 12 volts. Special
adapter? Depends on how much noise your car's electrical
system makes. My Passat makes a bleep, bleep, bleep
sound, easily picked up when the car is on, so when I
shut it off, it's possible. (I think it's computer bus noise).

I have used mine in the car several times. I always used an inverter because I was also powering a laptop and other things. It worked pretty well. I ran a mag mount antenna onto the trunk lid from inside. I used an external speaker to make the audio louder.

3339. network use step-by-step

Yahoo group: PCR1000
Date: 2005-01-18 21:02:40 UTC
From: Pres Waterman
Topic: 3339 Message: 3339

I have been using the free Ham Radio Deluxe and the free Windows Media Encoder for a few days now via my home network and the Internet.

I love it! Currently I am at work listening to my PCR-1000 at home. Now, all I need to do is get a better antenna and I will be all set.

The "server" is merely a Windows XP Home laptop connected wirelessly via 802.11b and the PCR-1000

Basically, you run a "service" on the computer connected to the PCR-1000 and you also run Windows Media Encoder to feed the audio. On the client you run HRD3.1 to control and Windows Media Player to listen.

Here are some step-by-steps:

to control the PCR-1000: install Ham Radio Deluxe 3.1 Beta dated December 23, 2004
available at http://hrd.ham-radio.ch/downloads.html
choose HRDv31beta build 606
run and test the software and your PCR-1000

then set up the server:
at a DOS prompt go to \Program Files\Amateur Radio\Ham Radio Deluxe
and run HRDRemoteSvr.exe -install
go to control panel...administrative tools...services and look for HRD and adjust properties to Automatic so it runs through boots
note that it is now unnecessary to run HRD itself on the server, just the "service" you just set up

to CONTROL the receiver remotely
once running HRD on the client:
choose receiver
Company: Icom
Radio: PCR-1000
Comport: remote
speed:autodetect
then CONNECT
address: the ip address of the server for example 192.168.1.104
enter default port 7805
user name: user
password: password
click connect
when you get the welcome message, click OK
then see Remote Connection just minimize it
you will now be able to control the receiver over your LAN

to BROADCAST
use Windows Media Encoder 9 (
http://www.microsoft.com/downloads/details.aspx?FamilyID=5691ba02-e496-465a-bba9-b2f1182cdf24&DisplayLang=en)
choose BROADCAST a live event
choose the audio device you are connecting the PCR-1000 to. Suggestion: set the PCR-1000 to line level out and feed it to your sound card line level in.
choose PULL from the encoder rather than push to a server
Encoding Options: FM Quality Audio (sounds GREAT on wireless as well as a cellphone connection at about 50kBPS, should be fine for dial-up)

to LISTEN remotely:
use Windows Media Player 9 or 10
file...open URL
enter 192.168.1.104:8080
(the same address of the server followed by colon 8080)
the bad news is there is about a 10 second delay for the audio to appear on the client but you won't believe how good it sounds.

If on the Internet use ZoneAlarm (http://www.zonelabs.com) on the server and allow the two applications Windows Media Encoder and HRD to act as servers
When I skipped that my server was hacked into within minutes! USE ZoneAlarm!!!!!!!!!

If going through a wireless or wired router, set the DMZ open for the server only. For example, my server is at 192.168.1.104 so THAT one machine is open to the Internet
I'm not sure if the DMZ setting in the router can restrict to ports, if it did I would allow access back from the Internet only to ports 7805 and 8080 on the server

Thanks

ALL-NEW Yahoo! Messenger - all new features - even more fun! http://uk.messenger.yahoo.com

3341. New Shortwave Log and Radio Control Server released

Yahoo group: PCR1000
Date: 2005-01-19 05:43:16 UTC
From: Robert Sillett
Topic: 3341 Message: 3341

A new version of the Shortwave Log suite of programs is available for download from http://www.shortwavelog.com.

Here is a list of some of the things you can do with Shortwave Log:

* Control your PCR-1000 (and other receivers) via a web page or over TCP/IP. See http://www.shortwavelog.com for a list of receivers currently available to the general public.

* Share your logs in a real-time, online logbook. These logs can be searched to aid in identifying transmissions and are viewable here - http://www.shortwavelog.com/Community

* Generate reception reports in ten languages.

* Use ten frequency and call sign databases to identify transmissions: The Shortwave Log Community, HFCC, ILGRadio, Prime Time Shortwave, EiBi, FCC HF Seasonal, FCC AM Engineering, NIMA Non-directional Beacons, FCC Amateur, and Canadian Amateur.

* Use the "What's Playing Now" function to view a world map and gray line with plots of all current transmissions. Click on a plot to automatically tune your receiver to that frequency.

* Generate forty-two distinct reports.

* Use five custom reports for DX clubs (Australian DX News, BXDC, NASWA, National Radio Club, and ODXA).

* Scan, track, and monitor your QSL cards. You can scan QSL cards and link them to logs directly in the program.

* Generate a web page of all your QSL cards. For example: http://www.sillett.us/communication/qsl_collection/qsl.html

* Calculate propagation predictions, find MUF/LUF, the beam heading and distance from your QTH to the transmitter, and the number of F-hops.

* Calculate sunrise/sunset for any location.

* View aerial images and maps of transmitter locations or other locations within the United States.

* A version of the program is also available for the Pocket PC.

* Shortwave Log is available in English, Italian, Norwegian, Russian, Spanish, and Swedish.

ShipPlotter displays information about ships that are within VHF range of your position using the Universal Automatic Identification System (AIS).

AIS is a system that ships use to communicate their positions to each other as part of the global maritime safety system. From December 2004, all ships over 300 tons must carry an AIS system which broadcasts information about the ship to any suitably equipped receiver.

AIS uses very short bursts of high speed data on two VHF channels in the marine band. The two frequencies used are 161.975 MHz and 162.025 MHz. Using a low cost radio scanner tuned to one or other of these channels and ShipPlotter software running on your PC, you will be able to see a radar-like real-time chart of all the large ships manoeuvring in your area together with information about their destination, estimated time of arrival and the dimensions of each vessel.

Enjoy!

Subject: [PCR1000] Re: Weather Fax decode software

Although I have, and sometimes use WEFAX, I find that the one I use most is the WXtoIMG program. It does a lot more than just make a display of the raw data. It also can control the receiver (PRC1000) and can actually keep track of the satellites and download the images and process them all automatically without any human intervention. It has a built in satellite tracker and can update keps from within the program while running. I get great images using the PCR1000 and get to see sea temperatures and much more, as it also has several enhancement modes for the images, including built in map overlays based on your position. In my opinion, a fantastic program and so far, I have had great support from the author in New Zealand ...

To: PCR1000@yahoogroups.com
Subject: [PCR1000] network use step-by-step

I have been using the free Ham Radio Deluxe and the free Windows Media Encoder for a few days now via my home network and the Internet.

I love it! Currently I am at work listening to my PCR-1000 at home. Now, all
I need to do is get a better antenna and I will be all set.

The "server" is merely a Windows XP Home laptop connected wirelessly via 802.11b and the PCR-1000

Basically, you run a "service" on the computer connected to the PCR-1000 and
you also run Windows Media Encoder to feed the audio. On the client you run
HRD3.1 to control and Windows Media Player to listen.

Here are some step-by-steps:

to control the PCR-1000: install Ham Radio Deluxe 3.1 Beta dated December
23, 2004
available at http://hrd.ham-radio.ch/downloads.html
choose HRDv31beta build 606
run and test the software and your PCR-1000

then set up the server:
at a DOS prompt go to \Program Files\Amateur Radio\Ham Radio Deluxe
and run HRDRemoteSvr.exe -install
go to control panel...administrative tools...services and look for HRD and
adjust properties to Automatic so it runs through boots
note that it is now unnecessary to run HRD itself on the server, just the

"service" you just set up

to CONTROL the receiver remotely
once running HRD on the client:
choose receiver
Company: Icom
Radio: PCR-1000
Comport: remote
speed:autodetect
then CONNECT
address: the ip address of the server for example 192.168.1.104
enter default port 7805
user name: user
password: password
click connect
when you get the welcome message, click OK
then see Remote Connection just minimize it
you will now be able to control the receiver over your LAN

to BROADCAST
use Windows Media Encoder 9 (
http://www.microsoft.com/downloads/details.aspx?FamilyID=5691ba02-e496-4
65a-bba9-b2f1182cdf24&DisplayLang=en)
choose BROADCAST a live event
choose the audio device you are connecting the PCR-1000 to. Suggestion:
set
the PCR-1000 to line level out and feed it to your sound card line level
in.
choose PULL from the encoder rather than push to a server
Encoding Options: FM Quality Audio (sounds GREAT on wireless as well as
a
cellphone connection at about 50kBPS, should be fine for dial-up)

to LISTEN remotely:
use Windows Media Player 9 or 10
file...open URL
enter 192.168.1.104:8080
(the same address of the server followed by colon 8080)
the bad news is there is about a 10 second delay for the audio to appear
on
the client but you won't believe how good it sounds.

If on the Internet use ZoneAlarm (http://www.zonelabs.com) on the
server
and allow the two applications Windows Media Encoder and HRD to act as
servers
When I skipped that my server was hacked into within minutes! USE
ZoneAlarm!!!!!!!!!

If going through a wireless or wired router, set the DMZ open for the
server

only. For example, my server is at 192.168.1.104 so THAT one machine is
open
to the Internet
I'm not sure if the DMZ setting in the router can restrict to ports, if
it
did I would allow access back from the Internet only to ports 7805 and
8080
on the server

You have to register the software in order to control your PCR1000.
You also get a lot of other options available if you register.

I have been using the free Ham Radio Deluxe and the free Windows Media Encoder for a few days now via my home network and the Internet.

I love it! Currently I am at work listening to my PCR-1000 at home. Now, all
I need to do is get a better antenna and I will be all set.

The "server" is merely a Windows XP Home laptop connected wirelessly via 802.11b and the PCR-1000

Basically, you run a "service" on the computer connected to the PCR-1000 and
you also run Windows Media Encoder to feed the audio. On the client you run
HRD3.1 to control and Windows Media Player to listen.

Here are some step-by-steps:

to control the PCR-1000: install Ham Radio Deluxe 3.1 Beta dated December
23, 2004
available at http://hrd.ham-radio.ch/downloads.html
choose HRDv31beta build 606
run and test the software and your PCR-1000

then set up the server:
at a DOS prompt go to \Program Files\Amateur Radio\Ham Radio Deluxe
and run HRDRemoteSvr.exe -install
go to control panel...administrative tools...services and look for HRD and
adjust properties to Automatic so it runs through boots
note that it is now unnecessary to run HRD itself on the server, just the
"service" you just set up

to CONTROL the receiver remotely
once running HRD on the client:
choose receiver
Company: Icom
Radio: PCR-1000
Comport: remote
speed:autodetect
then CONNECT
address: the ip address of the server for example 192.168.1.104
enter default port 7805
user name: user
password: password
click connect
when you get the welcome message, click OK
then see Remote Connection just minimize it
you will now be able to control the receiver over your LAN

to BROADCAST
use Windows Media Encoder 9 (
http://www.microsoft.com/downloads/details.aspx?FamilyID=5691ba02-e496-4
65a-bba9-b2f1182cdf24&DisplayLang=en)
choose BROADCAST a live event
choose the audio device you are connecting the PCR-1000 to. Suggestion:
set
the PCR-1000 to line level out and feed it to your sound card line level
in.
choose PULL from the encoder rather than push to a server
Encoding Options: FM Quality Audio (sounds GREAT on wireless as well as
a
cellphone connection at about 50kBPS, should be fine for dial-up)

to LISTEN remotely:
use Windows Media Player 9 or 10
file...open URL
enter 192.168.1.104:8080
(the same address of the server followed by colon 8080)
the bad news is there is about a 10 second delay for the audio to appear
on
the client but you won't believe how good it sounds.

If on the Internet use ZoneAlarm (http://www.zonelabs.com) on the
server
and allow the two applications Windows Media Encoder and HRD to act as
servers
When I skipped that my server was hacked into within minutes! USE
ZoneAlarm!!!!!!!!

If going through a wireless or wired router, set the DMZ open for the
server
only. For example, my server is at 192.168.1.104 so THAT one machine is
open
to the Internet

I'm not sure if the DMZ setting in the router can restrict to ports, if
it
did I would allow access back from the Internet only to ports 7805 and
8080
on the server

To answer your question simply . YES ..

The frequencies are stored, and the scanning is done in the software
you are using, not the radio. The software you select is the key to
how the radios operate. This is true for both the PCR1000 as well as
the R8500. There are a variety of control software out there and
they are indeed vastly different. Some are better than others at
certain things. Each package has it's protractors and detractors.
Indeed, you will also find many proponents and opponents of each.
Best bet is to read through the posts about each different package,
then go to the websites of each and download the free trial versions
and try them out yourself. Virtually all of them have some form of
demo to see if it is what you want.

To list a few, and in no particular order:

The software that comes with the radio from ICOM
Radiocom (Bonito?)
Bonito (demo version packed with some PCR1000s)
Ham Radio Deluxe
Talk PCR
Trunk PCR
Probe 1K
There is supposed to be Palm software of some kind (called PCRPilot
I think) ..

RadioControl has a different concept of dealing with memories. It allows the creation of Memory Files that are virtually unlimited in size that is no splitting in banks is done. Instead you will create a file and group frequencies of a particular matter in there. So one file may have 100 and another just 15 channels. However its of course possible to create files that are all equal in size and to mimic the "bank feature" of certain radios. It's up to you.

Of course there is a Trial Edition available for download at www.radioctl.com/english The Trial and Lite Edition limit the size of Memory Files to 50 channels (however it's enough for many purposes), the Standard and Professional Edition do not have any limits. In addition the software also provides a MS Access based Frequency Database that can hold all of your known frequencies and serve as base for creating Memory Files.

Hi all,

I have the EDACS protion of the New Version almost finished!
The Dump View and Control Channel Display are about 98% done.
I just have to finish the LCN to Frequency Map and maybe a few minor
updates/changes
to allow propper Scanning/Searhing and ID Hold features, then I'll be
sending it out to you...

I expect to start sending it out the end of the month or in the 1st week of
February...

I Also need the following people to send me their new E-Mail adress:
Jeremy Dunman
Forrest Stone
Tom Rohrs

Regards,
Jay

Subject: [PCR1000] Re: PCR1000

To answer your question simply .. YES ...

The frequencies are stored, and the scanning is done in the software
you are using, not the radio. The software you select is the key to
how the radios operate. This is true for both the PCR1000 as well as
the R8500. There are a variety of control software out there and
they are indeed vastly different. Some are better than others at
certain things. Each package has it's protractors and detractors.
Indeed, you will also find many proponents and opponents of each.
Best bet is to read through the posts about each different package,
then go to the websites of each and download the free trial versions
and try them out yourself. Virtually all of them have some form of
demo to see if it is what you want.

To list a few, and in no particular order:

The software that comes with the radio from ICOM
Radiocom (Bonito?)
Bonito (demo version packed with some PCR1000s)
Ham Radio Deluxe
Talk PCR
Trunk PCR
Probe 1K
There is supposed to be Palm software of some kind (called PCRPilot
I think) ..

John,
There is a Palm Pilot compatible version out there...it uses the full link cable for comms. A few "gotchas" is you have to have ALL the lines from the Palm available, and be ready for some serious battery drain if you do use it continuously.I don't have the precise model cable in front of me at the moment, but, there are after market cables that work really well. I use the Palm version on a Handera. Works well too...especially when the screen is set to full...

OK now I got it working while I am working with WIFI in the house and it
really is great . But what address do I use when connecting from the
office (over internet connection)?
I am using a linksys WIFI router. What is the external address I use
when connecting from the internet?

I used DNS2GO by http://www.deerfield.com

That gives you a virtually static IP address to get back in even though your
actual IP address changes at your ISP's whim.

The router needs to have DMZ set up so that the Internet can see the server
behind the router. And ZoneAlarm is very necessary because the server is
hanging out on the Internet and will get attacked regularly.

3372. Yahoo use of "web beacons" ***Important***

Yahoo group: PCR1000
Date: 2005-01-28 20:51:12 UTC
From: jcoupejr
Topic: 3372 Message: 3372

Hi Everyone,

Recently, it came to my attention that Yahoo is now using Web Beacons, a small spy device to track your movements on the web for Yahoo! I know I value my privacy and I hope you do as well. Printed below is information on the web beacons and how you can tell Yahoo not to use them on your machine. I strongly suggest that you follow the directions outlined below and "opt out" of the web beacons.

Jack Coupe

Yahoo is now using something called "Web Beacons" to track Yahoo Group users
around the net and see what you're doing and where you are going - similar
to cookies. Yahoo is recording every website and every group you visit.

Take a look at their updated privacy statement:

http://privacy.yahoo.com/privacy

About halfway down the page, in the section on cookies, you will see a link
that says web beacons. Click on the phrase web beacons.

That will bring you to a paragraph entitled "Outside the Yahoo Network." In
this section you'll see a little "click here to opt out" link that will let
you "opt-out" of their new method of snooping.

Once you have clicked that link, you are exempted.

Notice the "Success" message on the top of the next page. Be careful because
on that page there is a "Cancel Opt-out" button that, if clicked, will
*undo** the opt-out.

A 'walkman' to 'walkman' connector cable, or a single 1/8" (3.5mm)
to 1/8" cable.
The PCR uses a single mono 3.5 mm jack. Your soundcard most likely
has a stereo 3.5mm jack. The right channel part of the plug is called 'ring'. The mono plug (or left channel) has 'tip' and 'sleeve' (ground).
Convention suggests that Tip is left channel, Ring is Right, and sleeve is
ground. The left channel is also the 'mono' channel.

Use a 3.5mm Jack Lead 3M L45AU maplin's number

3378. Dream DRM decoder 1.17 released

Yahoo group: PCR1000
Date: 2005-01-31 16:07:14 UTC
From: g8jxa_sw
Topic: 3378 Message: 3378

http://pessoal.onda.com.br/rjamorim/dream.zip
Unzip to a folder and run Dream.exe

You'll probably need qt-mt230nc.dll. Get it here;
prdownloads.sourceforge.net/netclipboard/qt-mt230nc.dll?download
and put it at the same folder as Dream.

In the DRM Evaluation Dialog the different plots now can be opened in
separate windows by right clicking on a chart's name.
In AM mode the Evaluation Dialog contains a Noise Reduction filter.

More info here;
http://drm.sourceforge.net/
https://sourceforge.net/projects/drm/

3379. Icom pcr1000 and DRM

Yahoo group: PCR1000
Date: 2005-02-01 10:01:21 UTC
From: dfrenchau
Topic: 3379 Message: 3379

Has anyone had any luck de-coding DRM with an unmodified pcr1000.
I have tried many a night, down here in Tasmania, alas to no avail.

I would welcome any info on this subject, I am curently using dream
v1.7.
I have read on the net that some bloke has, by using the pcr at 50khz
on usb and tuning 12khz above the advertised frequency. He also
states that a strong clean signal must be present, I have had some
beaut signals, but no success with the de-coding.

3380. Re: Icom pcr1000 and DRM

Yahoo group: PCR1000

From: g8jxa_sw
Topic: 3379 Message: 3380

I have made this combination work, some points;

1) Check flip audio spectrum - Important - show stopper.
2) As the filter is set to 50KHz the DRM station needs to be
stronger that adjacent stations.
3) Dream seems to work better on weaker signals so try
attenuating the input.
4) Try changing the AGC.
5) Dream takes time to "sync" with difficult signals so leaving
for a few minutes can help.

Do you get the station ID?

Hi Davida (?),

I also succeeded in making my PCR-1000 and DReaM (version 1.14). A strong signal is preferable, since weak signals tend to have large drop-outs, but I have been able to hear nearly all stations mentioned in DReaM's list (except the small -10W and such) from Germany and France. There is one difference however with the set-up you mention. I tune to only 6 (six) kHz above the nominal frequency, and it does not really matter whether I use my PCR in USB, LSB or CW-mode.. Very important also is what g8jxa says: FLIP AUDIO SPECTRUM!

Good luck,

Frank van Gerwen
Netherlands

I have tried it with the flip spectrum, but alas no success.
I will try the latest version of DREAM and see if it makes any
difference. I will also try it at 6khz (approx) above the advertised
frequency to see if it helps.

Also it is interesting to note that usb, lsb & cw has no effect on
the data stream.

I have heard some people complain that the pcr1000 is too sensitive
and has a problem with overloading signals, but here in Australia we
do not have the hash that the people in the northern hemisphere have
to contend with, so overloading is not a problem, at the moment I run
a Diamond discone for most vhf/uhf (and also hf when the bands are
noisy) and a 100m longwire, made from a 2.5mm2 earth cable, it is
then connected to a 10 metre piece of rg213 in to the radio room. the
outer conducter (shield)is connected to an earth rod which has been
driven 2.4 meters in to the soil. From there the coax is connected to
a converted Yaesu fra-7700 active antenna (note that the preseletor
stage is only used, not the amp)this seems to be the best set up
(for me anyway) to receive weather fax signals, and also for other
general utility listning.
Once again thanks for the replies

The latest version(s) of Dream support AM and FM decode, both are very good (just heard the ISS using the PCR1000 and Dream).

Try getting the AM (or FM) decode working as this will prove that the sound card etc is working. The AM decode sometimes needs help to find the 12KHz carrier frequency (click on the peak on the spectrum chart).

When a DRM signal is found the first indication is that Dream finds the carrier (or pilot tone), if you are tuned 12KHz off frequency it will be about 12,000 (mine is 11,985), then you will get station ID, lastly you will get audio. Dream is not too worried about the precise "12KHz" frequency.

If I used a 100M antenna expect my PCR1000 would start to glow! LOL. Most of the time I use the discone antenna and only use my 75 foot long wire for weak signals and almost always with the attenuator and an AH-4 tuner.

3386. Newbie Questions

Yahoo group: PCR1000
Date: 2005-02-02 17:08:58 UTC
From: Lee H. Badman
Topic: 3386 Message: 3386

Hello to the group! With a PCR1000 on the way, wondering about some things from fellow users:

- Overall happy with the unit?
- Is the DSP a must have, or get by without it?
- Can a PC have more than one controlling software loaded, but probably only use one at a time, I guess?
- Any software to stay away from?
- Opinions on best software?
- Must-know Tips/tricks for a new guy?
- Did you know that the PCR1000 is used on unmanned arial vehicles for surveillance by the military (trivia- heck, gotta give something back after all these questions...)

Thanks-

Lee

YES! It is one of the best radios in its price range.

> - Is the DSP a must have, or get by without it?
You can get by without it

> - Can a PC have more than one controlling software loaded, but
> probably only use one at a time, I guess?
I have three programs I use, but you can only use one at a time

> - Any software to stay away from?
The Icom software, and Bonito Radiocom

> - Opinions on best software?
Personally, I like TrunkPCR, because it allows the radio to follow
motorola trunked systems. If you like listening to shortwave, try a
program called Ham Radio Deluxe. For general scanning, try Talk PCR

> - Must-know Tips/tricks for a new guy?
Read the instruction manual, don't use the supplied ICOM software,
start out with Talk PCR.

> - Did you know that the PCR1000 is used on unmanned arial vehicles
> for surveillance by the military
I did not know that.

> Thanks-
You're welcome

When using a longwire, get a LongWireAdapter (by WinRadio.com) from Grove Ent. and a GOOD GROUND.

> > - Did you know that the PCR1000 is used on unmanned arial vehicles

I believe the US Predator uses TWO for RECON and another couple for Control, just as everyother nation that is building their own...NASA also has a few applications for them. BUT they DON'T have to buy the Bonito XXX.

3392. PCR1000 Troubleshooting

Yahoo group: PCR1000
Date: 2005-02-03 14:53:23 UTC
From: Jerry
Topic: 3392 Message: 3392

Hi all, my PCR1000 decided to shoot craps the other day. DC to daylight receive is down about 20 db. The attenuator is still switching in and out, so the problem isn't there. And since it has multiple front end transistors for each band segment, I figure the problem must be beyond those (unless of course something took all of them out at once). I'm thinking maybe the first IF amplifier?

BTW, I did reload my saved EPROM backup, no joy. No thunderstorms around here in January, but perhaps snow static buildup on the antenna could have taken something out?

If any of the technical people out there have seen this before and know of a common solution, please let me know. Normally I work on my own equipment, but frankly the really tiny surface mount components on the PC boards scare me a bit. I may end up sending it back to ICOM and let the experts fix it.

Thanks,
Jerry Sharp, KD0GS

Is the only busy and active PCR1000 group or are there others, preferably one that has an active owner or mod. The info in here great, thanks chaps but why do we have to put up with all the spam crap?

I better say hello! I recently bought a second hand PCR1000 for AIS decoding using shipplotter and so far I've not done much else with it although I have succesfully and very easily decoded DRM using the latest version of Dream.

There is a moderated Icom PCR1000 group (I am one of
the moderators) but there seems to be a lot more info
exchanged on this group.

It is the ICOM_PCR1000 group on yahoo,

Ideally you need a 12KHz IF output;
http://www.sat-schneider.de/DRM/DRM.htm

The 12KHz off-set "no-mod" works within limits;
http://g7ltt.dyndns.org:8010/drm/no-mod_drmtests.html

Software is here
http://pessoal.onda.com.br/rjamorim/dream.zip
Unzip to a folder and run Dream.exe

You'll probably need qt-mt230nc.dll. Get it here;
prdownloads.sourceforge.net/netclipboard/qt-mt230nc.dll?download
and put it at the same folder as Dream.

In the DRM Evaluation Dialog the different plots now can be opened in
separate windows by right clicking on a chart's name.
In AM mode the Evaluation Dialog contains a Noise Reduction filter.

More info here;
http://drm.sourceforge.net/
https://sourceforge.net/projects/drm/

Boy, o boy. I've asked, begged and volunteered. We did make some strides, though. Somewhere back, I think the message #s were around 1000, we got our share of 'porn' spam. Not just images, but all the 'crap' that falls into that catagory. I had forwarded it all to abuse@... and since most offenders were using yahoo email addresses, to abuse@yahoo, also. Not much changed until I saw some Yahoo executive on TechTV boasting about their anti-spam software. Then I assaulted TechTV with those spams, saying ' look what your friend Blah Blah is allowing in the groups, while he is bragging on TV that he can stop it.' Two weeks later, it ended.
Right now this is a slightly different type of spam. However, it falls under catagory G. in the TOS agreement.
What I'd like to see is all the members 'VETTED', or checked for their intent. I don't want to check your email each time you send one.You, as 99.9% of our members are good people, and just allowing only members in good standing to post should be enough. Should we get 'spammed' or simply 'abused', it would just take one member 30 seconds to remove the offender. But sometimes getting a human at Yahoo to hear you is difficult.
Let's continue to find a way to save this group...
Some others think joining icom_pcr-1000 is the way to go. I belong to both, plus the qth.net group. By far, this one is the most fun.

I belong to all of them just like skip and I agree this one has the most posts. I very rarely see any from the .qth.net group. Yes I agree that the Porno spam is pretty far out of content for this group. I suggest that everyone join the other groups and abandon this group by simply signing into yahoo groups and under options check "leave this group". Since this group is completely open anyone can see the members information and gather up email addresses and use them for direct spamming.
The other ones are less spammed.
Just think that if the world was perfect.

What it takes is folks who care (and the comments show that they do)
to;

1) Post your replies to;
http://groups.yahoo.com/group/ICOM_PCR1000/
(the spam free group)

2) Post here that a reply has been posted in ICOM_PCR1000.

Once the ICOM_PCR1000 group builds members and traffic it will become
the main group.

As a moderator on the other group, the only one I have had to remove was the guy from Brazil. I am a member of several other groups, including TalkPCR and we do not get any spam. I have noticed an increase of members joining the other group, but as everyone says this is the busiest, and probably most members of this one are memebrs of the other. I had a look yesterday on this group and there are 1000+ members. All I can say is if you want to swap groups, go through the process and post to both groups. Living in the UK you will have to bear with me as I am a few hours ahead.

Cheers

Bill

Our 'spammer' is a yahoo member. If we were all to forward his spam to
abuse@...
they perhaps would remove his account, and perhaps anymore that come
from his IP address.
Should we try for a Super Sunday?

Visit the PCR1000 'homepage' and search the archives for "SPAM".
The first reference was #495 by Pres Waterman back around August, 2002.
There was another bout in the #1300s and last run was #1800 or so.
It's early for me, right now, but you can trace some of the ideas we were
beating around back then...

Is the list owner, Ken Johnson still around? What normally happens with lists that have only one moderator/owner is they give up, get bored or forget the password. The cure is easy, all new members are moderated for their first post. The spam is coming from bots, they create a yahoo address, sign up, post some spam and sometimes try again. If a new member sends something on topic it's approved and they are set to unmodded, if it's spam they are banned without the junk mail ever reaching the group.

I'm a mod on an Icom group with over 2500 members, this form of housekeeping takes at least a minute a day max but unless the sole owner/mod is still about and can be bothered nothing can be done.

Paul

Try sending Ken an email... I've had no reply.
Sadha V has been pretty consistant over the past three months.
And, when someone gets booted, their IP is recorded. Of course,
their ISP can issue a new one, just as you can be issued a new SSN,
but that trick doesn't last for long.

Ken Johnson is the group owner;
http://groups.yahoo.com/group/PCR1000/members?group=mod

But emails to him have been bouncing;
http://groups.yahoo.com/group/PCR1000/members?group=bounce&sorted=5

So unless he reappears this group will remain unmoderated and open to
every passing scumbag to spam.

There is a moderated group with an owner who cares;
http://groups.yahoo.com/group/ICOM_PCR1000/

Hi there... this post is intended only for those who understand how
to programm the pcr1000.
I've downloaded the "allcmds.txt" file to see how the pc communicate
with the pcr1000...but i did'nt understand very well....
Can someone explain me how to power up the radio and set the radio to
a freq? (for example 105.2mhz).
Any language :) (c/c++,pascal,vb,etc...)

It's enough to know the correct sequence of bytes to send.

Sorry for my english!

Many thanks!!!

Jay, just got it working, thanks a million! It's great sitting here listening to the Denver cops on their EDACS system using my PCR1000!

One question though, I can't seem to get the "Delay" to work on trunked systems...I fooled with the delay on the main panel, plus the scan delay under the Control menu. Probably something silly that I'm missing.

Again, thanks, and again, sorry that I doubted you a couple of weeks ago.

You do need to register SP after the evaluation period but I've not heard of anyone having problems with the web page. It's definitely worth registering too, the share facility is fascinating and it also encourages the author to bring out yet more updates and features. If you need more help join us on http://groups.yahoo.com/group/shipplotter/ it's a pretty busy group for a programme that isn't yet two months old!

Paul, the PCR works well on AIS, make sure you have the latest version of Shipplotter for maximum decodes though. I'm using the PCR or an 8500 and SP 4.5 on the south coast.

Paul

same here got it decoding but no audio yet as there
were nearby stronger stations

software appears to be pretty neat

why use the 50 khz bw and not 15 khz since it appears
the signal BW is less than 10 khz or are some stations
using the wider bandwidths now?

Hi Steve,

When I listen (PCR1000 and Dream 1.14) I always use the 15 kHz bandwidth. AFAIK the channel width for DRM is 12 kHz, so 15 kHz in fact is too wide already. Depending on where you live, you should be able to decode at least those stations directed to your area. I have sofar been able to hear all available stations, exception some very low power (100 or even 50W from France and Germany, on 28 MHz or on crowded MW frequencies), which I hardly expect to hear anyway.

Good luck,
Frank van Gerwen / Netherlands

Topic: 3396 Message: 3445

If you have a down converter (450KHz to 12KHz) you can decode at the 6KHz bandwidth of the PCR1000.

If you are using the "no mod" approach you will need to set the BFO 12KHz from the DRM signal to get the 12KHz output. This means you need at least 25KHz of IF bandwidth.

A strong station inside the IF pass band will pump the AGC and cause problems.

I am typing this with some nice Jazz playing out of DW on 3995KHz with 22db SNR using a discone in IO91rk.

From: jack195133
Topic: 3447 Message: 3447

I'm trying to learn how to use this program and can't seem to figure out how you keep scanning a group of frequencies. I can get it to scan, but as soon as it hits a frequency that has traffic it does not continue scanning. What have I missed?

Thanks

Make sure to double click on the scan button, this will set the radio
to resume scan, single clicks will set the scan to stop when squelch
is broken without resuming.

You have to double click on the scan arrow to get the software to continue scanning after it receives a signal. If you single click on the scan arrow it will stop scanning after receiving a signal.

3452. "Com port trouble?" after using usb>serial interface

Yahoo group: PCR1000
Date: 2005-02-18 18:53:54 UTC
From: dxa43
Topic: 3452 Message: 3452

Hi all,

I have a little (?) problem, and was wondering if someone could help me.
I already searched the archive and found lots of info but no solution to my problem.
So, what happened ?

I bought a new laptop last week. (Acer1362lc)
No RS232, only usb. So I purchased an Sitecom USB to Serial interface, model CN-104v2.
Installed the drivers for the interface. Everything ok so far.
Then installed the original software from Icom with the pcr connected and power-on, but had an error wich gave me a laptop completly frozen and a screen wich looked like a raster from a chessboard filled with all the colors of the rainbow.
After a hard reset and restarting the pc I got the blue screen.
Tried a second time, everything looked fine, Icom software worked but always the little box wich told me ''COM Port Trouble?" and "Communication failed. Cannot acces receiver''
Changed to other com-ports, but no luck. Always same error report.

After several attempts, I gave up. Connected my pcr1000 back to my old Dell laptop from the early nineties where it had functioned for over 2 years.
To my big surprise it gave the same error: ''COM Port Trouble?" and "Communication failed. Cannot acces receiver''
Tried several com ports. But no luck.
Uninstalled the Icom software, and re-installed it again on the Dell laptop wich has a 'real' rs232 but same errors.
Re-installed Talkpcr, same problem: cannot acces receiver.

Is it possible that the receiver is broken, is this a eeprom failure .????..... Because I can't understand why it wouldn't work anymore on my old Dell ...
I am lost now ... have no solutions and hope someone recognise these problems and can help me.

Ivo

Have you switched the PCR1000 off and back on? This might help clear out any strange mode the receiver might have got itself into.

I use a PCR1000 with an Apple Mac Powerbook and had to use one of those usb to serial adaptors since it doesn't have a serial port either, and it works fine, so the concept is valid.

Peter

3454. Linux PCR 1000 software question

Yahoo group: PCR1000
Date: 2005-02-18 20:17:53 UTC
From: Steve
Topic: 3454 Message: 3454

I'm sure this has come up before but here goes anyway.

I have a quad-boot system. AMD Athlon 850 mhz with 3hdd@200gb storage running MS Windows XP, 2K Professional, SuSE Linux 9.0 Personal Edition (commercial) and (Red Hat) Fedora Core 3 from downloaded/burnt iso distributions - which works phenomenally well!

Question is, I've downloaded a program that *should* work on the FC3 platform called "qtpcr". I downloaded and installed the appropriate RPM build for Fedora Core 3. The graphic interface loads, but it will not communicate with the com port or the radio.

Does anyone know what I may need to change in the various directories (/etc or /usr, /bin... etc) to make this thing work?

Thanks.

3455. Software/Freq imports for control programs

Yahoo group: PCR1000

From: Lee H. Badman
Topic: 3455 Message: 3455

Just getting my feet wet on my recently arrived non-Bonn PCR1000. Having great fun with the Icom 2.2 software, and Talk PCR. Also have looked at HAm Radio Deluxe- now my questions:

- Other than Bonnito, are there any free control softwares that I've missed?
- I think it's been established that Bonnito is not available freely- is that still correct or is there in fact a download that I might be missing?
- Has anyone found a quick way for doing mass frequency imports like from a web page, or a CSV, or from some other program (like my R3's software) etc.
- Anyone got any upstate NY freq files for any of the above that they'd like to share?

I'm being lazy- full confession!

Thanks-

Lee, KC2IYK

From: bochaka
Topic: 3452 Message: 3457

Hi
The problem is more than likely caused by the usb/serial adapter
unit ,returing incomplete data packets to the radio.The Icom software
does not tolerate this and gives a com port error.
Try using TALKPCR software instead of the icom supplied software ,it
it a lot more tolerant for this kind of issue.

From: Folke Persson
Topic: 3455 Message: 3458

It´s not quite fair to compare RadioCom with ICOM:s software or
with Talk PCR and other alike software which controls the receiver
"only". RadioCom is a decoder software for several different modes
and can ALSO control e.g.PCR-1000 to some degree.
Bonito is the company name and they have several different s/w like
RadioCom 4.5, 5.0 and 5.2 http://www.bonito.net/frames/en_mar_index.htm
V 4.5 is quite cheap to buy but the later versions are not, to say the
least.

I don´t know why ICOM choose to bundle the PCR-1000 together with
RadioCom (Bonito) 4.5 in the US, everywhere else that I know of the
radio is sold with ICOM:s s/w only.

3471. Discriminator Output

Yahoo group: PCR1000
Date: 2005-02-24 17:22:34 UTC
From: Bob Warriner
Topic: 3471 Message: 3471

Hi, everyone, what a great forum.
I recently bought one of these versatile scanners and would like to know if anyone has located a point on the circuit board where I could extract pure audio (the so called discriminator output) I am interested in Acars,Hffax etc, and need the purest of signals for reliable decoding.
Thanks in anticipation, Bob

Actually even more versatile;
Try the socket labeled "Packet", guess there was not enough room
for "Discriminator Output".

You get "scanning" when there is no DRM signal.

Suggest you start by getting AM decode working, settings > receiver mode > AM.

Once you have AM decode working the try DRM.

Where are you?

First get the AM decode to run, do you have a 12KHz IF? Or are you
using the no mod approach?

DW on 3995 from 4pm through the night to 10am is probably the best
place to start DRM decode as it very strong.

Thanks in anticipation, Bob

++++++++++++++++++++++++++++++

Hi Bob,
Use the "Packet 9600" socket on the back of the radio. It will do fine!

3481. Question about PCR1000

Yahoo group: PCR1000
Date: 2005-02-27 03:21:53 UTC
From: Louis Diamond
Topic: 3481 Message: 3481

Hi all, I am a lurker and leaning toward the purchase of a pcr1000.
Question is: with all the talk of radio waves going digital is this receiver future proof regarding the possible changes in transmission properties.
Would new antenna/s be necessary?
Is the receiver capable of decoding the proposed digital signals?

Thank you and I value your opinions.

3482. Re: Question about PCR1000

Yahoo group: PCR1000
Date: 2005-02-27 21:20:36 UTC
From: Robert Sillett
Topic: 3481 Message: 3482

The PCR-1000 is definately not future-proof in and of itself. But since it can be used with external software, you may be able to support future modes.

Take DRM. The PCR-1000 cannot decode DRM. If you modify the receiver and use a DRM software decoder (like the commercial VT Merlin software or the open source DReaM software), you can receive DRM with the PCR-1000.

A similar condition exists with trunked scanner systems. The PCR-1000 cannot receive trunked systems. But if you use the Trunk PCR program, you can make the PCR-1000 work with trunked systems.

So while the PCR-1000 is not future-proof, it is certainly better suited for future modes by the ability to use external computer programs to enhance the functionality of the recevier.

Bob

3483. What laptop?

From: acatherder@comcast.net
Topic: 3483 Message: 3485

I'd recommend either a Dell or Sony for a laptop, 512 Mbyte memory, P4 3.xx gig speed. As regards "must use serial port"...the current crop of laptops come only with USB 2.0 ports. Most laptops from either Dell or Sony utilize the ESS series Sound Blaster compatible sound cards. With a docking station, their capabilty is enhanced. I have a dongle that is USB to Serial adapter and it works well with the ICOM PCR1K. Now, if you are truely in dire requirement for a serial port, I'd recommend a PCMCIA based serial card, the manufacturer is Socket Communications, and the type I use is a single serial port adapter card. (I do a LOT of field work with the ICOM PCR1K and when I have both fired up as well as all four USB ports going that P4 3Gig processor is getting a run for it's money...)
If you do go the route of the Serial Card adapter, then, pay close attention to the installation instructions, because successful use of more than one ICOM PCR1K is not tricky, just careful attention to some of the fine points of using Windows based OS'es...(BTW, most newer laptops come with XP Home, and getting Pro installed will drive up the cost a wee bit...)
Dave

Hi,

I have used the Toshiba Satellite M45-S331 with both Ham Radio Deluxe and TalkPCR with my PCR1000 -- no problems. This is one of the new M series Pentium notebooks -- very fast with a nice screen. The Radio Shack USB to RS-232 cable works fine (I assume others will also), but you have to convert the floppy disk that comes with the cable as the Toshiba has no floppy drive. At the same time I'm controlling the PCR1000, I've ran Digipan to decode PSK31 with the built-in "sound card" -- this too seems to work with no problems. I've also used an old HP 700MHz P3 to run either TalkPCR or the Icom software with Digipan -- I didn't have any trouble with this configuration but it was a little slow.

Actually there is a Laptop that still has a 9-pin RS-232. It's at HP Shopping but it's a Refurbished Laptop. I only have two of them and they work great.

A friend of mine bought one and it was defective and they replaced overnight via FedEx.

if you're JUST going to be using it for controlling
the PCR1K.. I'd reccomend the HP OMNIBOOK 800, it's a
P166 with up to 128 MB ram.. not all that fast..but
TINY...and a built in mouse..it's literally smaller
than a piece of paper... and thinner than a pack of
cigarettes...

3490. PCR1000 with ALA1530 Loop

Yahoo group: PCR1000
Date: 2005-03-03 16:55:35 UTC
From: Tom Rohrs
Topic: 3490 Message: 3490

Do any of you use the Wellbrook ALA-1530 loop antenna with your PCR-1000?

If so, can you relate a real-life comparison of the ALA-1530 to an end-fed random wire with or without a "magnetic balun" ?

Would you recommend the ALA-1530, given its relatively high price?

Thanks

-Tom-

To my surprise, the Dell 510m came with legacy 1 x 9pin serial port, and 1 x LPT port. They were not mentioned on the website. I got it just a few months back.

It is not small in size, but will run latest software which is a plus. To me it less tiring carry this than coping and managing with another machines.

Cheers, Ling SM

I have a PCR1k,about a yr old,used aproximately 10
hours since I got it,for decoding miscellaneous
digital signals..then "got bored with it" ...and it's
been sitting on my shelf since.... I would definitely
be interested in trading,as I am in need of more of a
desktop unit rather than a computer controlled unit..
I'll even throw in my dubbing cable I use for the
discriminator output..hows that sound?

bonito= el sucko

OK .. well.. cons(IMHO)it has too many options,and is
difficult to use

PROs ..it has a lot of options,lol

but I think you'd be MUCH happier using freeware like
talkPCR .... its MUCH easier to use,more
intuitive,very simple to operate,and with a host of
features.

TalkPCR is better if you do not need the decoding options. It's easier
to use, the data files are editable with a text editor such as notepad
or TextPad. I have both and the bonito never gets used.

Robert

From: Ralf Reiterer
Topic: 3498 Message: 3501

Hi Spiro,

> ANYONE USING THE BONITO SOFTWARE PLEASE TELL ME THE
> PRO & CONS WHEN USED WITH THE PCR1000.

you might try RadioControl. This software is a true 32-bit Windows user interface compliant application, so it's easy to learn and supports a wide range of radios including the IC-PCR100 and IC-PCR1000 receiver.

Beside direct control of the receiver, it features frequency management with a real database, management of memories in memory files (incl. a software based scanner, so you can even scan them with your IC-PCR1000) and a frequency search with graphical spectrum.

The Standard Edition allows the use of multiple receivers at the same time and the Professional Edition features a plug-in interface and is therefore extensible.

So if you want to give it a try, the URL is:
http://www.radioctl.com/english

Best regards
Ralf

http://birthday.yahoo.com/netrospective/

3505. radiocomm 4.5

Yahoo group: PCR1000
Date: 2005-03-06 23:42:17 UTC
From: wirelessworld2001
Topic: 3505 Message: 3505

The radio comm 4.5 software is in my opinion not worth the money. I bought it to use with my PCR-100 and its bascially a decoder program and it does control my radio but I can do that with other programs easily. They have good support and answer back quickly but do not answer the questions I asked

Look elsewhere
John

TalkPCR is better if you do not need the decoding options. It's easier to use, the data files are editable with a text editor such as notepad or TextPad. I have both and the bonito never gets used.

Robert

3509. PCR1000 - Audio shuts off after 30 seconds...??

Yahoo group: PCR1000
Date: 2005-03-07 04:12:02 UTC
From: n0kxu
Topic: 3509 Message: 3509

Question for the group. I just recently encountered a problem with either my receiver or the serial cable. Regardless of what version of Icom's software, or what program I'm running, once I bring the program up it will run for about 30 seconds, the the audio "clicks" off. The program will let me change freq, etc... but if I continuously change freqs, modes, "anything", it will stay running for as long as I'm still "sending it commands" (for lack of better terms). Once I've stopped using functions of the program, it runs for 30 seconds or so, then the audio goes off. (straight from the receivers speaker) I've tried this on two different computers, running two different operating systems, and it does the same thing. Could this be in the serial cable, or possibly something in the receiver itself? Thanks

Robert

1) I'm just using the regular serial cable that came with the
receiver.
2) I've tried different versions of Icom's software as well as
TalkPCR, which neither cured the problem.

I'm going to try to check out the wall transformer tonight, in case
it maybe starting to go south. (voltage rising/current dropping) ?
I'll let you all what I find.

Robert

3516. PCR Pilot cable pinout?

Yahoo group: PCR1000
Date: 2005-03-10 02:52:56 UTC
From: Lee H. Badman
Topic: 3516 Message: 3516

Anyone have the PCR pilot or the other one (1P1kc)working? I have an otherwise OK PCR 1000 and a good software load on the Palm device. My cable is the Palm Sync cable to a DB-9 straight through m-m, like in absolutely straight through (pin 1 to 1, 2 to 2, etc.) to PCR1000, but both programs can't find the receiver.

Wonder if there should be a change in pinout? Any ideas?

Great group, by the way.

Lee

You need to use a null adapter. do a google or yahoo search and you should be able to find it...or go to Radio Shack and buy a 9-9 null modem adapter.

I'm guessing here, but maybe you could install it as a different user.
When you "switch user" the 'outgoing' version should keep running.

The other problem is that you'll need two com ports, or run one through
a usb to serial converter cable.

Or buy a cheap laptop?

Peter

3523. Re: [PCR1000] Icom software

Hi Chris,

> Is it possible to install a second copy of the Icom software, to
> drive two PCR-1000's on the same computer? If I try to install
> second copy it gives option to uninstall first copy or cancel, is
> there a way round this?

it's very simple. Just create a second folder (e.g. C:\Program Files\Icom\PCR1000-2) and copy the contents of the (original) installation folder (e.g. C:\Program Files\Icom\PCR1000) into that. That way you can run two separate copies. Finally you should create a shortcut for the second "instance" on your desktop or the start menu.

That trick works since the Icom software stores its settings in the PCR1000.ini file that is located in the installation folder (beside the executable file). Of course that gives problems when you want the software to use in a multi user environment or as "normal" user since then you (normally) don't have write access to the "C:\Program Files" folder, in most cases to your home directory only.

Regards
Ralf

You need to get a USB to serial converter. This will then appear as a new COM port on your PC and you tell whatever software you are using to use that.

Your local computer shop should shell them, usually about ?15 - ?20, or cheaper off the web.

Jim, G1HUL

You can get a USB to Serial converter. I got mine on eBay. It costs
just a few $/£/Kopeks...

My PCR1000 came with a serial cable. This plugs into the USB-Serial
adaptor. Or you can just plug the adaptor straight in to the PCR1000.

Should work, the US PCR1K has the cell frequencies "blocked" but the same otherwise.

From: Gary Anderson (G)
Topic: 3537 Message: 3537

Hi All..

How do I check if my version of the PCR1000 is blocked for cell freq.

Iam running HAM RADIO DELUX and it able to tune the radio to 800Mhz
does this mean it is open??

Thanks
Gary

Topic: 3537 Message: 3538

Hi
How do I check if my version of the PCR1000 is blocked for cell freq.

Iam running HAM RADIO DELUX and it able to tune the radio to 800Mhz does this mean it is open??
not necessarily. It depends how HRD has implemented the driver for the PCR1000. In other words, the radio has two communication modes. In one it returns whether the operation was successfull, in the other it doesn't.

The RadioControl driver has implemented the exact frequency range for the PCR1000 and checks whether it is cell blocked or not. So with that software you can test it.

Regards
Ralf

3539. pcr1000 wanted uk version

3544. RxPlus: Radio Controller, DSP Audio Processor, Digital Decoder, Data Base Manager software

Yahoo group: PCR1000
Date: 2005-03-14 21:59:29 UTC
From: Noel Bouchard
Topic: 3544 Message: 3544

TELE DATA Inc. is pleased to announce the release of a new version of
it's RxPlus
Shortwave Receiver Controler / Audio Processor / Digital Decoder /
Database Manager software
with full support for the ICOM PCR-1000 receiver
+---+

RxPlus is actually like four program in one ...

- A full featured Receiver Controller with it's unique Visual Band
Explorer for easy
band selection and scanning and a powerful Scanning Engine with
distinctive features like
Strong Signal Highlighting and Automatic Squelch. The visual band
explorer has been expanded
to accomadate the PCR-1000 extended frequency coverage with a new VHF
and UHF
band range selections and 96 selectable bands .

- An Audio Processor with Wave Form , Spectrum and Waterfall Display.
The AP also
memorize the last 60 seconds of audio for instant playback or save to
file on a mouse click.

- Audio Filters (BandPass, Notch, Noise Reduction filters Compressor /
Expander)
A VERY effective DSP Noise reducer !

- A built-in Digital Mode Decoder for RTTY, PSK31, HF-FAX and SSTV !
Decode HAM PSK31 or RTTY QSOs, Receive HF FAX and Color SSTV pictures !

- A Shortwave and User's Data Base Manager with Extended ILG and HFCC
Database support and a convenient User's Database..
Also supports for .320 text database for utilities frequencies.

You can get more information and download RxPlus from the following WWW
site:

http://www.cam.org/~noelbou/RxPlus <http://www.cam.org/%7Enoelbou/RxPlus>

Your comments would be greatly appreciated.
Please email to RxPlus@...

From: Noel Bouchard
Topic: 3545 Message: 3545

Hello Group !

I forgot to say about that when you run RxPlus for the first time, you will get a
Receiver doesn't reply error message ... That's because RxPlus supports several receiver
so ... you will need to need to select your receiver from the list in the configuration dialog.

- Select the "File | Config " menu option and select the PCR-1000 from the receiver list.
- Restart RxPlus ...

Sorry about the 2nd posts

3546. TalkPCR bothersome nag screen

Yahoo group: PCR1000
Date: 2005-03-15 20:58:02 UTC
From: linuska2000
Topic: 3546 Message: 3546

Hallo TalkPCR users,
I am using my PCR-1000 with TalkPCR 2.4, which is now freeware.
The problem I have is the nag screen, which appears in very short
intervals (several times per minute) and in the routine use this is
VERY bothersome. Is this normal or is this problem only in my computer?
Thanks.

There's a crack for that somewhere, and I presume it's now legal, since
as you say the app is freeware.

Version 2.4 and the crack are located in the Yahoo group TalkPCR in the files area. DON'T use the freeware version 2.4F, its the one with the nag screen that screams "I'm now freeware!". Download and run version 2.4 and then put the crack into the same directory. Run the crack and it will work without the nag screen. This is the only version of TalkPcr that the crack will work on.

All TalkPCR files are located at:

http://www.arpa.org/radio/software/pcr/talkpcr/

Yahoo group TalkPcr file area is at:

http://groups.yahoo.com/group/TalkPCR/files/TalkPCR%202.4%20with%20patch/

Your welcome. I would rather not have to use a crack, but just purchase the program. But the author has decided to release the program to the public domain (though not the source code) and the use of the crack to kill the "freeware" nag is appropriate.

3552. TalkPCR the resource hog.

Yahoo group: PCR1000
Date: 2005-03-19 17:35:59 UTC
From: dave
Topic: 3552 Message: 3552

Hi,

Does anyone know of a setting or a Comport tweak to keep TalkPCR from hogging the processor? I've tried the unchecked "Hog the processor" setting under options with no luck. It still pegs out the processor at 100%.

My System: AMD 1.30Ghz, 512Mb of RAM running WinXP Pro.

I can hardly surf the web or do much else while scanning.

Any help would be greatly appreciated.

You have stumbled across the weak point of TPCR.
While scanning, 72% of my 3.06MHz P4 is grabbed.
When you go through the archives you 'll find that
nothing has been/ could be done about it. So, when
I want to scan, I use my scanner.
The spectrum analyzer/ bandscope does pretty much
the same.
Sorry.

From: Bill Smith
Topic: 3555 Message: 3555

I have recently downloaded the PC-ALE v1.03k software
to try out with the PCR 1000

Does anyone know how to configure it for the PCR as I
am having difficulties with finding an interger no
when inputting the frequency

Thanks

Bill

Hello, I have a few VHF HT's made by a company called :QUANZHOU NANFENG ELECTRONICS CO., LTD. the model is a Nanfeng NF-218, they are 137-167 Mhz 3watts, 10 channel. The company calls them a " VHF HAND HELD WIRELESS INTERPHONE"I got them in a auction. They all talk to reach other on all the channels. but I need a schematic, any help would be GREATLY appreciated. I have been on the companies pseudo web site and requested the information a few times, but either my Chinese is rusty, ot i cant speak their form of english....

From: Dave
Topic: 3559 Message: 3559
Attachments: 1 described; binary payloads are missing from this source WARC

There is nothing wrong with your PCR1000 it will be the sound properties of your pc.

Right click on the speaker icon in the system tray and left click on adjust sudio properties click on advanced and make sure there is not a tick in the mute box under speaker.

Then click on the options button then properties then make sure you have placed a dot in playback and tick in the box where it says speaker and also make sure your mixer device is set to your sound card and thats about it should be ok now

Also the PCR comes with the sound setting of the receiver set to the speaker of the PCR1000 to get audio coming through to your pc you need to open up the receiver and move the audio switch to ext speaker cause if you still have it as icom setting and connect up your cable from the line out of the pcr you wont get any sound coming through to your pc, easy to overlook.

Hope thats helps you.

regards...Dave

3560. Controlling PCR over a network is it possible

Hello, djsimo1000!
You wrote to <PCR1000@yahoogroups.com> on Mon, 21 Mar 2005 18:52:33 -0000:

Both Ham Radio Deluxe and SWLog have implemented radio control over a local network connection and both have many good points. I use SWLog when I am interested in monitoring the shortwave bands primarily and HRD for all other uses. Neither will broadcast audio over your network but there are many applications that do that and a search in Google will pick them up. I use p2pm1 from http://www.phonesnd.com/?l=ru&p=d6 but the others work as well. Setting up either of the control programs is a little tricky but read the instructions carefully. Any problems just get back to me although I am away for a couple of weeks at the end of this week.

With best regards, Dave Stewart. E-mail: david_a_stewart@...

A very simple way to do this is to use Netmeeting. That way you get
both radio control and audio in one simple package. I suggest you set
up the audio manualy and select the CCIT ulaw codec for best audio
(you also have to set the bandwidth to LAN or ADSL to use that codec).
It's fast, but not hi-fi!

You can try this for yourself at my Webpage: http://VR2HF.tripod.com

Date: 2005-03-23 21:22:06 UTC
From: m_karner_at
Topic: 3569 Message: 3569

Hi to all members,

I use the PCR1000 with the program JVComm to decode weather fax, RTTY and navtex.

As JVComm offers a scheduler function I also want to use it to change the frequency and switch off the PCR1000.

Which controller software can I use, the required frequency is sent as command line parameter by JVComm?

Thanks in advance.

michael

Topic: 3569 Message: 3570

Shortwave Log has a command-line interface to its radio control server
program.

http://www.shortwavelog.com

Here is the syntax for the command-line interface:

RCS: Command-line control for RCS -- Build 1906

Usage: RCS [parameters]
/F:filter
/FK:frequency (in kHz)
/FM:frequency (in MHz)
/H:hostname or IP address (if omitted, localhost is used)
/M:mode
/Q query the current settings; put /H: before to query a remote
/S:squelch

The values used must be the same as are used in the Windows program.
The /H: parameter, if used, must be the first parameter.
All parameters must be separated by spaces.

For example:
HF-250E - RCS /H:zeus /FM:15.16 /M:AMSL /F:4.5
RX-320 -- RCS /H:214.30.23.44 /FK:6165 /M:AM /F:4200
Query remote receiver - RCS /H:remotename /Q
Query local receiver - RCS /Q

Commands can also be entered one at a time:
RCS /FM:21.685
RCS /F:15

N.B.: The 2.8 filter for the PCR-100/1000 can be referenced as a 3.
Both of these commands are equivalent: "RCS /F:2.8" and "RCS /F:3"
All other receivers use the same format as in the Windows program.

3571. Trunk PCR questions

Yahoo group: PCR1000
Date: 2005-03-25 15:28:48 UTC
From: Robbie Joram
Topic: 3571 Message: 3571

Jay (or anyone in the know)-
I am new to scanning and especialy trunk tracking so I have a couple of questions regrading TrunkPCR. Forgive me if they seem stupid.

1st I have a valid control channel programmed in as well as the other trunk freqs (getting good 1's and recovery), but I am getting no voice traffic over the system. Any idea as to the problem? I have the 9600 packet out connected to the mic in on the sound card, and the mic control muted. I have the PCR's internal speaker enabled for the audio. Is this setup correct or do I need to go to the sound card again with a second audio cable to the line in and listen to the audio there (or will either way work)?

I did notice one channel came up with a des encryption indicator so I obviously can't get that audio, but I would have expected more audio than what I am receiving. I am attempting to listen to the Montgomery COunty Maryland public safety channels.

Thanks for the help. The program looks great. I am sure the problem lies in my limited knowledge. I look forward to getting it working (and donating).

Rob

Muted on the playback side, not on the record side...just to keep the control channel from screaming in my ear. I am not in front of my setup right now but I will verify.

3574. Re: [PCR1000] Trunk PCR questions

Yahoo group: PCR1000
Date: 2005-03-25 22:29:01 UTC
From: Crazy Californian
Topic: 3571 Message: 3574

Hi Rob,

If you are seeing approx. 45% to 55% ones and a good recovery rate, then your setup
is probably correct... Packet Out to Line-In, Ext. Speaker either connected to an external speaker
or nothing at all... (If you have the Ext. Spkr connected to a Aux-In on your sound card, then the Aux-In
on the Playback Mixer Contol should NOT be muted) The only device Selected for Recording in the Recording Mixer Control, should be only Line-In...

Is the system you are trying to monitor is this one:
System Type: Motorola Type II SmartZone
System Voice: Analog and APCO-25 Common Air Interface
Sysid: 743E
http://www.radioreference.com/modules.php?name=TRSDB&sid=2142

If so, then if the Trunk Settings are set for 800 Mhz then try changing it to "Splinter".
Also when you click the "Control" Button while trunking, if you see "Astro" under the "Type" Column,
then you will need to check the "Block Astro" in Trunk -> Settings...

The calls you will be able to listen to are the calls that say "II" under the "Type" Column in the Control Channel
Activity screen...
If after trying these options you still don't hear any Analogue Calls, then click the "Dump" Button and
click the "Start Logging" button. Save a few minutes of that and send me the log zipped up and I'll
take a look from my end to see if I can determine the problem...

Regards,
Jay

3575. Trunk PCR

Yahoo group: PCR1000
Date: 2005-03-25 22:45:36 UTC
From: Bill Smith
Topic: 3575 Message: 3575

I have been having a look at Jay's site for Trunk PCR.
The question I need to know, do we use Trunk Tracking
in the UK.

Can anyone help

Thanks

Bill

3579. [PCR1000] NAVTEX reception

Yahoo group: PCR1000
Date: 2005-03-28 11:12:18 UTC
From: David Allin
Topic: 3571 Message: 3579

Does anyone have experience of using a PCR1000 for NAVTEX? I am having a lot of problems getting it to work. I have best success, around 50% readable, with seattty and no luck at all with JVCOMM32. Any hints on set-up or which software works best would be appreciated, I am in The Netherlands and so am picking up the Dutch, Belgium and UK transmissions

Dave

From: Frankee
Topic: 3571 Message: 3580

Hi Dave,

apart from the fact that DX-stations are not always readable, I am
having no problem whatsoever with my PCR1000.
I don't know about your set-up, but the best thing to do would be to
tune in to 1 kHz below the nominal frequency, i.e. tune into 517 (for
518) or 489 (for 490), select USB and a bandwidth of 2.8 (3) kHz, start
SeaTTY and select Navtex, click between the two peaks you see above and
off you go!

Good luck
Frank from Castricum [Bakkum-Noord] (in the NL as well)

Hello Group !

> has anyone tried the pcr-100 with this?

Can anyone outline the differences between the PCR-100 and PCR-1000 ...
Especially the command set differences ...
If the two are not too different ... i could quickly add support for the
PCR-100 ...

Thanks for the interest and good words ...

Topic: 3586 Message: 3587

Well...

I tried RX Plus last weekend (Win 2K on a Macintosh using Virtual PC and a Keyspan adapter).

I loved it and would happily pay the price as soon as I'm sure a few gotchas are history.

The main gotcha was that when I closed windows, they'd show up checked as open in the menu but never reopen so I ended up with just the toolbar. When I closed the application and reopened it, things were still the same.

Before that, I got into that nifty window in the middle (sorry if I sound vague, I'm reciting this by memory)that lets you tune by band and then within a band. I could never navigate back out of it and couldn't change the focus to the main tuning bar.

Perhaps I didn't RTFM - No. Let me state clearly. I didn't RTFM. so that may be the problem. Now if I can get it working and get ILG to finally send me my password, I'll be stylin'!

I'm not one to say "Oh VPC on a Mac - Well THAT must be your problem!" The easy answer is never the correct one just because it's fun to say. Besides, I've found VPC to be robust. If an app works (and they all have so far) it works completely. Having said that, some of them have taken a little jiggering...

3588. Why is RxPlus not Free ...

Yahoo group: PCR1000
Date: 2005-03-30 00:42:11 UTC
From: Noel Bouchard
Topic: 3586 Message: 3588

Hello PCR-1000 Users !

First let me say that RxPlus is much more than a Rcvr Contoller software ...

It supports many different receivers brands and models.
It offers a full featured Data Base manager with ILG and HFCC & Users &
320 Db support.
It also feature a very well integrated DSP audio processor with
This records the audio from the receiver, filter it and play it back in
real time ...
A digital decoder for RTTY PSK31 HF FAX & SSTV
Note that the Audio Proceesor can be used together with the digital
decoder (an exclusivity ...)

This package is MUCH more complex than the available freeware controlers,
many of which by the way are excellent ! In many instance you will need
to run 3 or 4
different (freeware) to do the same things ...

The initial development of this software took well over 6 month of full
time work ...
and many, many, hours have been added since, to support users demand and
to add features
and receivers support.

> RX plus is well however too expensive,
> my alternative is the hamradio deluxe software of Simon Brown.

>Ah- but the $80 price tag is a divergence from other excellent
> programs put out there for free... Looks nice though.

>Well l agree with u Lee and if your in australia that converts to
about $140-$150 Aus dollors and l think thats a little to much.

Then lastly, as a professional programmer, i just can't work for free ...
And so ... would you ?

You are free to use any freeware that you wan't but this attitude toward
the "non-freeware" software just discourage innovation ...

In any case ... there is a FREE 30 days trial period ... so why don't you
try it ... at least you will know what you are comparing with ... ;-)

3589. IMHO RX Plus is still In beta.

Yahoo group: PCR1000
Date: 2005-03-30 03:43:13 UTC
From: redzoneav
Topic: 3589 Message: 3589

This is just my first impression so dont shoot me for not having all details I only spent about 20 minutes with it. RX Plus could be a great program but it needs some work before it is commercially released. I used it in windows XP. I received several errors that crashed it, and the controls are sometimes very jerky. The program also seemd to loose control after scanning, I could not change the frequency settings on the PCR even though the software said it was changing.

Another thing is really annoying is the program doesn't let go of the com port when you shut it down. I like to switch between control programs depending on what I am doing. I did find a workaround of switching the com port to an unused com number. Then shutting down.

If I was going to spend USD80 on a program I would probably anti up to bonita 5.0. Whoever is marketing this should acknoledge this version needs work and send it out as beta or cut the introductory price for beta testers with promise of upgrades. This would help to work out the bugs, feel the market out, and build up a sizeable user base, which is the best advertizing period.

Hello Red !

Yes i agree that the PCR-1000 support is not fully proven ...
But i did not get GP nor any COM port locking on the test system i used ...
nor did i get any report about it ... and remember that it does support
many rcvrs
and i never had any such report on any rcvr ...
Some issues might also arise with XP ... Have SP2 installed ?
Please tell me the hardware you are using (CPU / Speed / RAM) ...

Red does have a point there...

And so does Noel and they aren't exclusive to each other.

Being a professional programmer myself and being a human who likes to eat, I think that it can be considered reasonable that Noel's work here is worth paying for. At least IMHO. It does do a lot.

Having spent much of my career in software project management, I very much believe in a robust development process including a well engineered beta program. By well engineered, I mean well documented environments and tests as well as a well organized feedback mechanism for bugs, inconveniences and potential features beyond those extant in the product. It only takes a few minutes to create boilerplate for the above and to type up the tests which can be copied from the user manual instructions for each function.

If you want to go to these lengths Noel, I'd be happy to be a tester. These are among the things that seperate freeware from $$$ware. They also (among other things) help drive a product roadmap that lets potential buyers know what upgrades will be available in the future and at what comparative costs to registered users vs. new customers.

BTW, how do I get the windows back that went away as I mentioned in my last email? You can reply off-line if you wish.

Randy

Re: [PCR1000] NAVTEX reception

I use skysweeper and it works fine

I use USB mode with 2.8 khz filter and tune to 517 Khz

Re: [PCR1000] NAVTEX reception

Hi Dave,

apart from the fact that DX-stations are not always readable, I am having
no problem whatsoever with my PCR1000.
I don't know about your set-up, but the best thing to do would be to tune
in to 1 kHz below the nominal frequency, i.e. tune into 517 (for 518) or
489 (for 490), select USB and a bandwidth of 2.8 (3) kHz, start SeaTTY and
select Navtex, click between the two peaks you see above and off you go!

Good luck
Frank from Castricum [Bakkum-Noord] (in the NL as well)

David Allin wrote:

Does anyone have experience of using a PCR1000 for NAVTEX? I am having a
lot of problems getting it to work. I have best success, around 50%
readable, with seattty and no luck at all with JVCOMM32. Any hints on
set-up or which software works best would be appreciated, I am in The
Netherlands and so am picking up the Dutch, Belgium and UK transmissions

From: Ken
Topic: 3605 Message: 3608

Per the PCR-1000 review done at www.mods.dk dated 23-08-1998.
It works at least with serial numbers up to 1111 in the last 4 digits.

From: Eros John Cabral de Santana
Topic: 3609 Message: 3609

Hello PCR1000 users,

This is my first message on this list.

I´m a shortwave listener from Brazil (City: Campinas, SP).

I'm interested to buy the IC-PCR1000 but I would like to know if there
is any software that works with PCR1000 and make possible receive DRM
(Digital Radio Mondiale: http://www.drm.org) transmissions.

Does anyone know it?

Thanks,

Eros John C. de Santana
Campinas, SP, Brazil

From: Frankee
Topic: 3609 Message: 3610

Bom dia, Eros,

I have been a PCR-1000 user for a number of years, and am still quite pleased with it.
If you want to use it for DRM-broadcasts the official way, you will have to open it and do some surgical stuff (am not technical enough to tell you exactly what, but if you are interested I am sure you will find it on the Internet).
There is however a workaround with the DReaM-software (open source). You install it on your PC (windows, not too slow), connect your PCR-1000 to the soundcard and tune into a DRM station at exactly 6 kHz above its nominal frequency (e.g. for a station on 6190 kHz, you tune to 6196 kHz). You select a bandwidth of 15 kHz and either mode USB, LSB or CW. It will take some experimenting and still does not give the best results, but I have succesfully received stations from the Persian Gulf region, Russia, China, Canada and the Netherlands Antilles. It is quite amazing to hear FM-like stereo broadcasts from a great distance (e.g. from Deutsche Welle in Portugal). You will no doubt find further details on the Internet.

The reason why the results are not optimal, is partly because a good signal-to-noise ratio is needed for the software to be able to decode it. Since the official bandwidth for DRM is 12 kHz, this means that the receiver receives 3 kHz of additional signal, which lowers the signal-to-noise ratio.
For your information, I also succeeded in decoding some (few) stations with the audio from another receiver (the Lowe HF-225) with a bandwidth of 10 kHz, but certainly not as many stations as with the PCR-1000.

As to the choice of USB, LSB or CW, I don't know if that is true, but I think that it make a difference when you have one noisy adjacent channel. Perhaps a more technically-minded listener can enlighten us.

On the other hand (though that is not within the scope of this mailing list) you may also check the qualities of the newer Winradio receivers. There is one model that is able to decode DRM without additional stuff (I seem to remember that it is the Winradio 3000).

Good luck,
Frank / Netherlands

Hi i've been using my PCR1000 for DRM reception for about 1 year, it works very well.

I would suggest that you by an if mixer module from www.sat-schneider.de <http://www.sat-schneider.de/> (450Khz9) and install it in your PCR1000 , it's is a very easy installation if you have some soldering experience. You will find a description of the mod on there webpage.

Best Regards

/Lars

From: Robert Sillett
Topic: 3609 Message: 3613

To expand on the previous message, you need to use a third-party controller for your PCR-1000 in order to use the SSB/15 kHz filter trick.

The reason for this is that the factory Icom software does not let you choose the 15 kHz filter in USB/LSB mode.

I'm not sure if the Bonito software that is now included with new PCR-1000s let you do this. But programs like Shortwave Log and TalkPCR do.

But if you seriously want to receive DRM transmissions with your PCR-1000, you should look into the hardware modification. I have an unmodified PCR-1000, and I can only decode maybe 30% of all the DRM transmissions with my PCR-1000 that I can successfully decode with my Ten Tec RX-320D.

Bob

you have to install the DSP yourself, its easy to do

its good at reducing nopise and some tones esp in HF,
not much else can be done with it

3620. WANT TO BUY RxPlus V1.6 Software

Yahoo group: PCR1000
Date: 2005-04-16 05:39:15 UTC
From: megahertz555
Topic: 3620 Message: 3620

I've seen the ads and now I'd like to purchase your REGISTERED RxPlus V1.6 Software. $80 is too expensive so I'll be happy to consider your offer.

http://www.cam.org/~noelbou/RxPlus/index.php

Is there another Control program you would recommend instead?
Needless to say, it must be PCR-1000 compatable!

Thanks!
Anthony

Hello Anthony & Group !

Sorry but with the amount of work that the development of this software
required, $80 is a great deal ... I am not going to cut the price ...
So there will be no offer ... Sorry ...

From: Noel Bouchard
Topic: 3620 Message: 3622
Attachments: 1 described; binary payloads are missing from this source WARC

Hello Skip & Group !

Thanks for the good words ! (see below)
Let me bring two points here:

1- Most peoples have no idea of what is involved in software development.
I spent well over 6 month of (unpaid) time to develop this software.
I have > 20 years of software development experience and because of the
complexities involved in the DSP and Digital decoding and multiple rcvrs
support,
, let me tell you that i could not have developed this without this
background.

Also the SWR software controller is a very small and crowded market ...
so i cannot expect to sell 1000s of licences ....

2- One thing that ICOM did not tell you about the PCR-1000 is that's it
is really
only 1/2 of a receiver ... and that their software is almost useless ...

Finally, for those interrested i just released a new version of RxPlus with
new Scans feature that may please some PCR-1000 users.
You can now Pause or Stop Scanning when the audio level open the squelch.
You can also continuously scan a given band, or any portion of a band .
These scanning functions are intented to provide a "scanner" like
functionality
when exploring the VHF and UHF bands ...

You can get the latest version EXE from RxPlus Yahoo's group (in the
file section):
http://groups.yahoo.com/group/RxPlus/
(please email direct if you want mwe to email a zipped copy (only if you
can get zip files in email ...)

73s to all and good listenning !

No?l Bouchard
RxPlus developer ...

3623. [PCR1000] Attn trunkpcr users

Yahoo group: PCR1000
Date: 2005-04-16 22:36:07 UTC
From: Crazy Californian
Topic: 3623 Message: 3623

Well, as it turns out, my wrists were more than wrenched.
I went to the emegency room on the 2nd and after getting x-rays, it turns out that
I had multiple breaks in both arms and wrists including a compound fracture in the
right arm (no wonder the right arm was so swollen in a few areas)...

I just returned from the hospital and the doc says that I'll have a few more weeks
of healing before I get my casts off. At least I have a finger to peck with for now :)

Replying to e-mails will be few, if any, until further notice...

I also have a cracked knee cap with a leg imobilizer on that one which makes it hard
to get in front of the puter...

Until later,
Jay

Jay, get rid of the scooter. We need you, TrunkPCR isn't even up to ver 1.0 yet. :) Then you have to get started on the APCO-25 decoding version. :)

TrunkPCR is a awesome piece of software. Turns the PCR1000 into a whole new kind of radio. You guys who use it on a regular basis, send Jay a few bucks just to say thank you for all his work and effort, if you haven't already.

Take care and get well Jay.

Jay,

I have had folks tell me that the PCR 1000 is a bear to use but you have sustained by far the worst injuries of anyone I know in their use if this radio, I am contemplating the use of the old "10 foot pole" rule. however this would require the use of not only a hearing aid to hear the radio, but the use of binoculars to see the keyboard and monitor, my hand eye coordination is not what it used to be so trying to enter anything on the keyboard thit the nail attached to the end of the pole could be catastrophic to the keyboard... while you are recuperating perhaps you could think of some ways I could improve on on this. Voice recognition would be good, but I would get horse from yelling...

Be well soon, and take your time & most importantly, relax.

Tom

Jay,

I, as a rule, don't respond to this email group, but, I have to come out and defend the PCR-1000 by putting in my two cents.

Whoever told you that the PCR-1000 is a Bear to use must not be too familiar with the receiver, not too communications savvy, or not comfortable using a computer.

I have owned a PCR-1000 since it was first put on the market and I have owned the other PC controlled radios on the market. By far the PCR-1000 wins in performance and cost, hands down. I personally own four(4) PCR-1000s' and they all perform with the same consistent quality.

I would be very interested in knowing what the general conscience was that came to the conclusion that the PCR-1000 is a "bear" to use?

Subject: Re: [PCR1000] WANT TO BUY RxPlus V1.6 Software

Hello Skip & Group !

Thanks for the good words ! (see below)
Let me bring two points here:

1- Most peoples have no idea of what is involved in software development.
I spent well over 6 month of (unpaid) time to develop this software.
I have > 20 years of software development experience and because of the complexities involved in the DSP and Digital decoding and multiple rcvrs support,
, let me tell you that i could not have developed this without this background.

Also the SWR software controller is a very small and crowded market ...
so i cannot expect to sell 1000s of licences ....

2- One thing that ICOM did not tell you about the PCR-1000 is that's it is really
only 1/2 of a receiver ... and that their software is almost useless ...

Finally, for those interrested i just released a new version of RxPlus with
new Scans feature that may please some PCR-1000 users.
You can now Pause or Stop Scanning when the audio level open the squelch.
You can also continuously scan a given band, or any portion of a band .
These scanning functions are intented to provide a "scanner" like functionality
when exploring the VHF and UHF bands ...

You can get the latest version EXE from RxPlus Yahoo's group (in the file section):
http://groups.yahoo.com/group/RxPlus/
(please email direct if you want mwe to email a zipped copy (only if you can get zip files in email ...)

73s to all and good listenning !

Hello Anthony & Group !

Sorry but with the amount of work that the development of this software
required, $80 is a great deal ... I am not going to cut the price ...
So there will be no offer ... Sorry ...

Thanks for all of the get wells :)

My pcr-1000 has been running since I got home, just like my pro-96...
It's easy to turn them on and clicking the mouse to start the trunking and
so forth...
Any prolonged activity is a pain... with the plates and screws in both arms
& wrists,
my hands are still pretty stiff. Wiggling the fingers and slight bending is
about as far
as I've gotten so far... The casts came off the arms yesterday :)
So it's just going to take time now to get full use of them back...

Take care,
Jay

3645. PCR1000 Complete (w/DSP) for trade

Yahoo group: PCR1000
Date: 2005-04-25 18:41:31 UTC
From: Lee H. Badman
Topic: 3645 Message: 3645

Not really wanting to part with it, but my HF activities bring me to this point. A very specific trade is all I'm after:

My fully functional and much-loved PCR1000/DSP and all the trimmings for the Yaesu FC-10 autotuner and FM-747 board- both which must be 100% functional and in good condition. Dollar for dollar, it's a good trade, fair on both sides.

Sorry- nothing else considered!

Lee

I wonder if there is a schematic diagram for the PCR1K available for a nominal fee? It would sound like a voltage is missing that powers the front end is what is missing *or* the Local Oscillator stage...With a schematic, one could do a cursory exam of the unit, and not send it back blindly.

You can purchase a USB to Serial adaptor that will do the job.

Either new, or there's usually quite a few "buy it now" ones on eBay,
which is where I got mine, because Macs don't have serial ports,

Hi,

I have the Radio Shack USB to RS-232 intereface cable working with mine. It was about $35 at the local friendly Radio Shack. You don't say where you're located but most computer stores have something similar in the $20 to $40 range with drivers for most flavors of Windows, I've seen Apple, and there may be Linux somewhere -- you will need to install drivers. You will need to find which COM port it sets up as -- use Device Manager in Windows -- and change the port number in your control software.

Hi,

I have the Radio Shack USB to RS-232 intereface cable working with mine. It was about $35 at the local friendly Radio Shack. You don't say where you're located but most computer stores have something similar in the $20 to $40 range with drivers for most flavors of Windows, I've seen Apple, and there may be Linux somewhere -- you will need to install drivers. You will need to find which COM port it sets up as -- use Device Manager in Windows -- and change the port number in your control software.

As you have a .uk email address, I would assume that
you are in the UK.

I have been running mine using a Belkin F5U109 usb to
serial adaptor. Have had no problems with Talk PCR, or
HRD. As far as I can remember I got it from
www.partmaster.co.uk for about ?30.00

Cheers

Thanks Guys !
You guessed right - mid UK. Spent the afternoon getting it up and running -found a serial port hidden away (!). I'm about to visit the New York area soon - first visit over the pond. The thing that prompted me to dig it out and fire it up again - this Thursday (28th) sees the opening of a new international airport on my doorstep - about 4 miles away. Was an RAF base since 1937.
Thanks again. Brian

3660. RE: [PCR1000] Serial to USB

Yahoo group: PCR1000
Date: 2005-04-26 18:52:27 UTC
From: Darren Bruton
Topic: 3658 Message: 3660

Hi,

I have just purchased a serial to USB converter for my PCR1000. Im using Windows XP SP2
Im having problems getting TalkPcr to recognise the com port. My laptop only has USB ports.
How do I manually change the com port so Talkpcr can recognise it? There are 4 USB ports on this laptop

Many Thanks

Darren Bruton

Talk PCR should come up with a pop-up screen with a
com port error - you can manually select the port from
there. I have 2 ports on mine, but it seems to like
com port 6

Cheers

Hi

I would be very grateful for any assistance. Ive just uninstalled my
Bluetooth dongle as that appeared to be
using a wide variety of com ports. Still unable to get Talkpcr to recognise
the com port the PCR is on.

Thanks

3667. CLAIRIFICATION Re: WANT TO BUY USED RxPlus V1.6 Software

Yahoo group: PCR1000
Date: 2005-04-28 18:40:04 UTC
From: megahertz555
Topic: 3620 Message: 3667

Yeowwww, Sorry!

My original post was not clear! I am interested in buying a USED copy of RxPlus V1.6 that is registered.

Many times equipment is sold and software is NOT included. All I'm asking is that if someone has a registered LEGAL copy that they would like to sell, I am interested in buying it.

Mr. Bouchard, I fully understand the many many hours that are required to produce decent software and I fully respect that. I was NOT asking you the author and programmer to simply discount your program for me! Instead, I am asking to purchase a LEGAL used copy that has been lawfully purchased, registered and is for sale by the buyer.

In the future I'll be much more careful about my posts because I now see how easy it is to misunderstand messages sent in haste.

A sincere apology to the author, Mr. Bouchard, this Group owner and to the user base for my careless message.

Sincerely,
Anthony

3672. Re: [PCR1000] Re: pcr1000 EEprom Backup

Yahoo group: PCR1000
Date: 2005-04-29 23:17:12 UTC
From: Crazy Californian
Topic: 3669 Message: 3672

To Backup/Verify the EEprom in TrunkPCR, it's best if the PCR is set to a quiet unused frequency.
Under the Optons Menu, click Verify EEprom, when the window appears, click the "Verify" Button.
When the Verify EEprom window appears, click "OK", A progress bar should appear and show the
progress of reading the EEprom's contents. After it's completed reading the EEprom, the Progress Bar
will be hidden. The "Backup" button should now be usable. Clicking the "Backup" Button will save the
contents of the EEprom to a file where TrunkPCR is installed that you can use later to restore the EEprom
if it's contents get corrupted. In the past 4 years of using my programs, my EEprom has never been corrupted by using my software on my PCR's...

Regards,
Jay

Thanks! The problem was i had the radio on the control chanel.Moved it to a quite freq and it worked like a charm. I just purchased the unit used at a deal.Looks like it is the EUR/AUS version I guess that means it is unblocked.Between getting TrunkPcr and an unblocked radio I had better play the Lottery.

Yep! you have an unblocked radio, full 10khz to 1300mhz :)
Glad it worked... I'll have to make a change so it's set to quiet freq automatically...

Thanks & Regards,
Jay

3677. FOR SALE PCR-1000

Yahoo group: PCR1000
Date: 2005-05-05 20:45:04 UTC
From: Steve Wilbur
Topic: 3677 Message: 3677

I have an Icom PCR-1000 for sale. I don't use it anymore, so I'd like to sell it to someone who will use it. It worked great, I just lost interest in listening, as well as not having the time to listen anymore. I have the original box, the Icom software, ver 4.5 of the Bonito software, the factory antenna which needs new double sided tape, the power cable, manual, and the RS232 cable. When not in use it was unplugged from the wall, computer and antenna, as well as being grounded while in use.
I'm asking $325 US for it. If interested email me at on30fan@...

-- Cheers,
Steve

3678. Palm PCR1000 Software

Yahoo group: PCR1000
Date: 2005-05-06 01:36:17 UTC
From: Tom Ziko
Topic: 3678 Message: 3678

Hi to all,

Does anyone know if a Palm M505 will work with the PCR1000 if using the Palm M100 programs to control it? I recently picked up a Palm M505 and was curious if the same software from my Palm M100 would work with the Null Modem adapter and the Serial cable. I got two docking stations with the M505, one with the USB cable and one with the Serial cable. It would be great to be able to use the M505. Could get a lot of scan banks created on one 128Mb SD RAM card.

Hope everyone has a great weekend coming up.

Scan On!

Tom

All radio earths should be to a true earth like a rod or plate, certainly not a mains earth which is only a safety earth.

In grounding any equipment, it is true to ground to an earth ground. In some of the examples given in the ARRL Handbook, there should be a section in there that details how to properly perform this. If you're looking for a quick answer, here is a suggestion:
Get a brass or copper rod, aprox 6 to 8 feet in length, (if you're in the States, go to Home Depot or Lowes'.) Careful now, make sure you're not driving that rod into your power mains or gas line or sewage outlet when you go to install the rod...call Miss Utility BEFORE you put that rod into the ground. Next, as you've obtained the rod, there should be a wiring section in the same hardware store, and what you want to get is 12 gauge or larger wire. (By larger, I mean in diameter, so, as the number gets smaller, the larger the guage of wire.) The type of wire you want to get is called THHN. This is copper annealed and holds up quite well. Attach said wire to the post you've driven into the ground, route the other end to your PCR1K radio, and you're all set. If you're really into the whole grounding properly thing, then go whole hog, buy a copper plate, make that your central ground point which you can ground your antenna switch, and other equipment to. If you've got the big bucks, get a bonding kit. This kit molecularly bonds the ground at the pole and makes for a low loss ground path. just my two cents worth.

Hi Darren,

I had similar problems. Bought a brand new USB-serial adapter,
installed with drivers from enclosed CD. Got "com port failure" from
ICOM software and TalkPCR.

Solution: the drivers on the CD were really old!!! The latest on the
net was v2.0, on the CD I got v1.4.

Upgrade your drivers from the supplier internet site!!!

Hi,

Thank you for all the replies. When I uninstalled my Bluetooth adaptor and restarted the machine my serial to USB connector
became com 5. I never use Bluetooth anyway so it turned out well.

I have used Talkpcr a couple of times now, but find its not ideal for scanning. I listen to military aircrafts and have around 100 frequencies I need to scan. I find that it only scans up then stops, it stays on some frequencies longer than others even though there's no activity

and its very very slow.
Perhaps its just me using the software? Or is TalkPcr better for monitoring just a couple of frequencies?
Im so used to having a dedicated scanner, scanning between 50-100 channels per second.
I do not want to have to sell the PCR1000 as I got it at a good price and its got the dsp filter.

I've heard probe1k would be better, although its dos based and costs $64.95 around £35. It doesn't look like there is a demo
you can try first.

I would be interested to hear from others how they have set up their software to use the pcr1000 to scan multiple frequencies and what scan speeds you get.

Many Thanks

Darren Bruton

From: Ubbe
Topic: 3658 Message: 3685

I have the same experiance, both the speed and the channels hesitates, which I think is a result of the software not being able to handle the serial communication properly.

TalkPcr have a lot of unique features like individual volume, squelch and filter setting for each channel and it has audio recording and logging. But as you mention, it is very slow and cumbersome to use and are suitable to log only a few frequencies, or perhaps running slow unattended searches.

Probe1k is a totally different ballgame and are more of "proper" scansoftware for general monitoring.

Of course the best thing is something like Unidens BC780 with it's 100ch/s speed and are recommended if you only want to catch the most possible conversations you can get without that many bells and whistles.

I get around 20-25ch/s with TalkPcr and more than 40ch/s with Probe1k. But the two have actually totally different strategy and you'll probably find use for both at one time or another.

Ubbe.

Instead of using brute force to drive the rod into mother earth try a cupper tube (in Sweden standard length is 6meters i think)connect it to a water hose apply water and the tube will drill itself into the ground. (If not to many stones...)

On face value one might think so, BUT, their are so many high resistance joints in drain pipes it is a lost cause. Their may even be a plastic section in the run. Water pipe is usually hidden and may well be or include plastic, gas is hazardous even if metal and more likely to be platic yhes days.

Unfortunately there is only one satisfactory answer, a dedicated earth spike/plate.

There are a number of reasons why it happens which would take a while to explain. A mains earth is usually at a different potential to a true earth.

Dare one suggest you sneak in an earth spike and cable while no one is watching.

3689. Pcr1000 Grounding

Yahoo group: PCR1000
Date: 2005-05-09 20:12:16 UTC
From: k5woR
Topic: 3689 Message: 3689

Of course a lot depemds on your soil conditions. Here in north Texas we have very good soil conditions as far a grounding but it is also clay and hard to get ground rods down. The easy and cheap way is to buy not ground rods but 1/2 or 3/4 copper pipe. Attact a female garden hose adapter to one end and to the hose. You turn the water on and push down on the copper pipe and in no time the rod is down 4 to 8 feet.

Topic: 3692 Message: 3692

HI!

I am interesting in buying PCR 1000 for 38.4 FSK signal reception however I am not sure if it is suitable fo 38.4 kbaud signal. I would like to use it for satellite signal reception.

I saw in specification that it has got IF filter 50 kHz wide. Is it enough? Does it have direct signal output from demodulator? I would like to connect the receiver with TNC. I saw that there is a connection in a rear panel but only for 9600 baud. Is it possible to use this connection for 38.4 kbaud?

Can anybody help me?

Thank You
Jan Linowski

I've seen where the use of Mains Ground was disastrous. The Mains ground that I saw had a 60 volt potential difference and that caused some rather "interesting" problems...but, I digress...On a fibreglass shelled vessel, such as a boat, if you were to locate the main grounding plate that would serve quite well. It is usually where the installation team put their grounds for the sonar and radar as well as the radio would tap into for their grounds. If you're going for HF reception only, a Marine Antenna for the 30Khz to 30Mhz band would work ok, as it has a built-in ground counterpoise for this type of installation. (Worked well for Citizen Band Radios on Jeeps...) If you're going for as much bang for the buck without a whole lot of expense, (and it does get expensive!) then try this other idea...
Obtain some selfadhesive metalized tape, (just buy a little bit and test with an ohmeter to see what kind of conductivity you have or just take the ohmeter to the store with you...). If you feel it is satisfactory, then, buy sufficient amount to make a run, of say, 5' or so, in one direction, and (space permitting) make another run across the first run, kinda like a cross, or lower case "t". at the point where both runs intersect, that's where you'll place your antenna feedthrough. If the antenna mount is too small regarding penetration of the transom or hull or what have you, then you'll have to extend the centre tap of the antenna line and attach the ground bus to the cross, (tough to do, but, a 1000 watt soldering iron and flux usally does well.) I've installed similar kits in vehicles that had a fibreglass roof, only these kits were commercially available, so all the mechanics were worked out. (And, yes, in the field I've had to do similar without these kits and believe me, trying to find stuff like that in Mozambique is NOT easy!)

3698. FSK 38.4 kbaud reception

Yahoo group: PCR1000
Date: 2005-05-14 18:35:51 UTC
From: jan linowski
Topic: 3692 Message: 3698

HI!

I am interesting in buying PCR 1000 for 38.4 FSK signal reception however I am not sure if it is suitable fo 38.4 kbaud signal. I would like to use it for satellite signal reception.

I saw in specification that it has got IF filter 50 kHz wide. Is it enough? Does it have direct signal output from demodulator? I would like to connect the receiver with TNC. I saw that there is a connection in a rear panel but only for 9600 baud. Is it possible to use this connection for 38.4 kbaud?

Can anybody help me?

Thank You
Jan Linowski

It only negotiates at 9600. It operates at 38.4 baud.

Yes there is a discriminator output.

Want 4 Calibrated World Timezone Clocks ~ one mouse click away?

YOU pick the time-zones and clock faces. You decide which Atomic
Clock to use as a standard and you can also synchronize your System
Clock via any NTP (Network Time Protocol) server accessible from your
computer. Many of the NTP Servers are listed within the program.

All this for free? SWL's you are going to LOVE this tiny program!...
Get SymmTime:

http://www.ntp-systems.com/software_download.asp?ID=product_software_lmcheck.asp

Enjoy!

3708. PCR1000 - Must Sell

Yahoo group: PCR1000
Date: 2005-05-31 19:53:00 UTC
From: valenfor
Topic: 3708 Message: 3708

Hey everyone - today is a sad sad day for me. I been getting my hands operated on for carpel tunnel over the past 4 months and of course havn't been able to work a lick. No one wants a puter programmer who's hands aren't working all the way yet.

With this in mind I am selling my PCR1000. I bought it just last year for $550 from that big named radio place that has a store here in AZ. I am looking for $450 for it. I have a magnetic mount Radio Shack antenna with it, works great. Had it on a DOS box scanning a good 40 plus channels a second with Probe software.

If you cannot pick up, please figure shipping from the 85042 zip code, as you will need to pay for shipping. Will ship in original box.

Again, really would like to get $450 as bad timing for me, but please send emails with offer.

Thanks,

Kevin

As you know, most of the features of the PCR-1000 are software
controlled, so..., it depends on your software.
The answer is YES, you can turn off the AGC.

Which software can do that? To my knowledge the only thing that can be done is changing the time constant. I have seen no software over the years that can switch off the AGC, nor any software with an RF/IF gain control, which would be neccessary to avoid overload if you do.

Best regards,

Icom's control vocabulary for the radio includes a code for turning the AGC on and off, and accordingly I included an AGC toggle in MacR-1000, my Mac-based control program for the PCR1000. You're right that there is no RF or IF gain control, other than the RF attenuator.

It's possible the command doesn't actually do anything...

The commands are available, but I do not know what
softwares that have actually implemented them.

<http://polywog.navpoint.com/www-philtered/icomlib/PCR-1000_Command_list.pdf>

Command "J4500" would set AGC off.

> Command "J4500" would set AGC off.

I would suggest that this information is based upon a misunderstanding of the operation of the receiver. They have looked at what is being sent to the receiver in the ICOM software and have misunderstood the meaning of the command. (Icom never published the command set for the PCR1000.) I haven't used my PCR1000 for a while, but seem to recall that the two AGC options had different decay times, making the one with the longest decay time more suitable for SSB/CW. In any case, an off option without the RF/IF gain control would be meaningless, since the RF/IF amplifiers would overload completely with reasonably strong signals.

Best regards,
Brynjar Berg

What you say makes a lot of sense, now that I think of it. Would it be better to label what I had thought to be AGC OFF as AGC FAST? This will make it into the next release of MacR-1000 (in a couple of weeks).

You are correct. The schematic shows that it is slow/fast
AGC switching and not ON/OFF AGC as the protocol
document says.

It would certainly make it correct. You can actually see the change in decay times by tuning in a S9 MW station and watch the S-meter needle drop as you engage the Attenuator. Almost instantly in one case (fast) and relatively slow in the other case. You will notice that the volume will seem nearly even which shows that the AGC is indeed working in both fast and slow settings.

Best regards,
Brynjar

G'day Harry,
A lot depends on how you want to use the receiver. I am not currently aware of a software fix for the agc, but you do have two workable options.

If you're simply using it for total power measurements you can measure the AGC voltage, as it is in direct proportion to the observed signal strength.

Or, in the r8500.the trick is to apply a fixed control voltage to the rf amplifier side of the circuit. I see no reason why that wouldn't apply to the PCR1000, but the usual disclaimers apply.

Further to the Astronomy use of the PCR1000. The TalkPCR software has a CalBDm setting of the S-meter. This can be calibrated for the individual receiver by editing a text file. Look in TalkPCR Help v. 2.0 for details. It will be timeconsuming (and will require a calibrated signal source) to calibrate your own receiver, but I do believe it should be possible to get it very accurate. Bear also in mind that you only need to calibrate the receiver for the frequency that you are interested in (or frequency band), thus you can reduce the needed work considerably, leaving the rest of the two files, AM15.CAL and WBFM50.CAL, as they are.

Best regards,
Brynjar

Quite possibly- have the PCR1000 complete with DSP and everything original- for $325. Email me off-line (out of the group) if interested. I love the unit, but need a couple of HF pieces more, hence the interest in selling.

3730. PCR1000/PALM and IP1kC/PCRPilot3C

Yahoo group: PCR1000
Date: 2005-06-13 10:18:06 UTC
From: Bob Warriner
Topic: 3730 Message: 3730

Hi all, I have a Palm 3C and have successfully installed PCRPilot without too much of a problem (it needed a null gender changer).
I have also tried to get IP1kC software to talk to the receiver but without success, I have tried a straight through connection and a null modem connector but there is always the same error message,

ie: ""System error,SrmSend(),Communication with radio failed...Please check cables and power""
Now my question is this, if Pcrpilot works OK, why doesn't IP1kC?
What could the differences be?
If anyone has managed to get this software working on a Palm 3C, would they be kind enough to let me know what what type of serial connection they used.
The software installs OK, the receiver icon appears when I tap the ON button, but that's it, I am an electronic engineer and so this is becoming an embarrassment LOL.
I have tried to contact the author but he doesn't answer e-mails which is a shame as this software looks good and could have a promising future.
Hope someone can help,Rgds Bob

I have had no luck with IP1kC either with a Palm IIIxe. Too bad, as
it looks like a far more capable program than PCRPilot, which cannot
scan or search.

From: Bob Warriner
Topic: 3736 Message: 3736

Hello to the group.
Has ANYONE managed to install IP1kC software and get it working, and if so, what serial configeration did they use, I have a Palm3C and a palm M130, and I can't get either of them to work, the program installs fine but with a serial port problem. I have used a straight through connection and a null modem gender changer and I still get the same error message ie: communication with the radio has failed, does the software require handshaking of some sort? PCRpilot3C works fine.
I have checked the service manual for the PCR1000 and found that the handshaking connections seem to be used, ie:CTS/RDS are connected to the DS14C232TM chip but does this software use them, it appears to be something of a mystery, I have heard that some members of this group has managed to get the software working, I would really like some help from them, if they have time to respond.
Why the IP1kC software appears to be so complicated to set up is a pity as it obviously is quite comprehensive and is worth developing further (simpler scanning routine etc).
Hope someone can put me out of my misery, it's been a great father's day, but it could be better :-).

Went to Radio Schlock to pick up one of those RS232 line checkers, that has the LEDs for all the lines to show activity, but of course they no longer carry the thing..........That could have shown what the issue was with DTS, CTS and all that.

Emailing JJ in Tokyo is a waste of time, he never answers. Pity, this does look like the perfect PDA program for control.

Hi Bob,

I haven't used it yet but the Uni_Trac satellite tracking controller is supposed to work with the PCR1000 -- but, according to the manual, you must tie pins 7 and 8 (CTS/RTS) together on the connector that plugs into the PCR1000.

I don't know if this will help you -- just a shot in the dark.

3742. Re: Palm PDA & IP1kC Software for PCR1000

Yahoo group: PCR1000
Date: 2005-06-20 20:05:32 UTC
From: Bob Warriner
Topic: 3736 Message: 3742

Hi John, thanks for your response, I have tried most of what you suggest, but have one or two ideas about the configuration of the serial port.
Some members of this group have said in the past that they managed to get the software working, but without the scanning function.
I have since learned that the port has to be configured correctly for the scanning to operate, even though the rest of the software is working normally, so there appears to be a lot more to this than meets the eye, are there any "C" programmers out there? have a look at the source code and tell the group how the software configures the serial port, that would put quite a few of us out of our misery :-).

I did get mine to control the radio but could never get it to scan. It has been a while since I played with it. I don't remember exactly how I had the cables connected. I did use a Palm III and I used my M130. Both worked. But neither would scan. I will try again and let you know the results.

Went to Radio Schlock to pick up one of those RS232 line checkers, that has the LEDs for all the lines to show activity, but of course they no longer carry the thing.....That could have shown what the issue was with DTS, CTS and all that.

Emailing JJ in Tokyo is a waste of time, he never answers. Pity, this does look like the perfect PDA program for control.

3746. Re: Palm PDA & IP1kC Software for PCR1000

Yahoo group: PCR1000
Date: 2005-06-21 16:12:21 UTC
From: Bob Warriner
Topic: 3736 Message: 3746

Hi Tod and the group, I am pleased to say that I have succeeded in getting the IP1kC software to work flawlessly (including scanning) on a Palm 3C.
Here are some of the changes I had to make to my null modem cable:
1. apart from the normal crossover connections ie 2 and 3, you also have to crossover 4 and 6, that's DTR and DSR, and 7 and 8 which are the handshaking pair RTS and CTS, this is assuming you are using a DB9 to DB9 cable, if you are using an ordinary moulded type of null modem cable, you will need to discard it and change it for one you can dismantle in order to make all the necessary connections.
The scanning facility works very well, all you need to do is tap on the software icon at the top of the screen, tap on scan, and then tap on "set up scan" you can adjust everything as if you were using Icom software on a PC.
I always had faith that this program had promise, I am delighted to say it fulfills that promise with abundance.
Feel free to mail me if further help is required, and thanks to those that took the trouble to answer my queries.
Now I am going to have a go with the Palm 130, I will post any info as soon as possible.

Hello Bob !

Happy for you! I have a tungsten E in USB port.

Do you think that to use a converter RS232/USB would function with 1PKC?

Hi Fab, I can't be sure that would work, you need a USB to RS232, I don't think I have ever seen one, plenty the other way around of course.
I am working on getting a Palm m130 to work with IP1kC software, that has a USB output from the cradle, the same as yours, I am modifying the cradle to bring out a serial lead as well as the USB so that I can plug it into the PCR1000 via a modified null modem adapter, I will post my results soon.

Great info, now I know what to do and look for. For a Palm IIIxe to serial adapter I have been trying a Delorme cable that may well not have the full serial line complement. Getting a regular synch cable is the first order of business, and then make up the custom null adapter.

Dear group,

I recently purchased a pcr-1000 receiver for a setup experiment for my research. I am transmitting calls between 20Khz and 100Khz at a carrier 150Mhz. I hope I can receive my signal on the wfm band. Anyone knows if ultrasonic signals are filtered out at the receiver side, and if so, is there a way to capture it before it is filtered. Any advice on what to use for real time data acquisition is greatly appreciated too.

Thanks,

Hi Bob,

I am going to give that a try with my Palm M505 to see if I can get it to communicate with my PCR1000. I have tried the usual Null Modem adapter on a DB9 serial cable with no success. I even tried it without the Null Modem adapter, what the heck! I will let everyone know if it works.

Hi David, The program you are after is called IP1kC and is available at WWW.Geocities.com/jjintokyo
It is a fully comprehensive controller for the Icom PCR1000/PCR100 and works very well once the correct connections are made to the receiver.

Hi Tom, yes, have a go, it is well worth the effort.
I can't be sure whether or not it will work on your model of Palm,
as the author only seems to have tested the software on a PCR1000
and PCR 100 using a Palm3C and an IBM Workpad3C, but I can guarantee
that it works very well on my Palm3C using OS 4.1, the Palm3C is a
few years old now, but is still my favorite, please let us know if
you succeed with your model.

Sorry David, I didn't answer your questions fully, as far as I know
it is Shareware (but deserves financial contributions, if only JJ
would respond to e-mails).
There are programs around that would allow you to look at the
program in Hex and Binary etc, but I think you would need permission
from the author to edit it!.

3758. Purchased my first PCR1000.

Yahoo group: PCR1000
Date: 2005-06-24 07:38:47 UTC
From: Eros John Cabral de Santana
Topic: 3758 Message: 3758

Hello PCR1000 group,

Yesterday, I received from USA my first ICOM IC-PCR1000.

Supplied accessories: Telescoping antenna, RS-232 cable (OPC-743), External speaker plug, AC adapter and CD ROM (Software supplied is Communications Receiver IC-PCR1000, Revision 2.2).

It looks like that this PCR1000 needs an excellent external antenna for a good reception, because using that telescoping antenna I didn't have good receptions. I think that shortwave bands during these periods are not ok.

For local FM broadcasters it was ok. Local Medium Wave broadcasters it was not so good, probably it is antenna problem again.

Is this software the last revision (Rev. 2.2)?

Thanks,

Eros John

Icom's "antenna" is dreadful.

Download a copy of TalkPCR - it's much better than Icom's effort. I believe it's on the files section here.

An example.

Bandscope doesn't function in SSB modes, so what do Icom do? Mute the receiver. Confusing, or what?

What does TalkPCR do? Puts up a notice saying that bandscope doesn't function in SSB modes but keeps the receiver working. That's the proper way of doing things.

And TalkPCR's bandscope itself is so much better than Icom's.

The only plus for Icom is the left/right mouse clicks to change frequency, and the 1Hz resolution, should you ever need it.

Good luck with the PCR1000. you might want to make a backup of the EPROM once you're familiar with the software.

Peter

Thank you Bob, I'll grab the program...although I hate the Geocities sponsored web pages...too many pop ups and tracking cookies...grrrr...
I use my PCR 1K at work on the HandEra, with a battery eliminator...(the program eats batteries like there's no tomorrow...). And it does do quite well: I maintain communications recievers and transmitters in the lab and on occasion, have to shut down the errant engineer that wants to reprogram a transmitter out of band...(we were issued an experimental license by the FCC and NO, we don't need to lose those frequencies due to a monumental screw up...).
I'll eventually spring out some $$ for a color screen PDA sometime soon...the eyes are a bit weary after looking at SMT components all day...
Dave

Bob,

I'm using a Palm IIIxe with IP1kc and it's working just fine. But it's the opposite for PCRPilot. It won't work with PCRPilot. I purchased this setup along with the PCR1000 from someone else and I really don't know exactly how he made the connections. If you will email me off line, perhaps I can go into more detail.

Hi Marco.
That's interesting, because the PCRPilot program normally only needs pins 2&3 reversed as in a normal null modem lead, the IP1kC program needs more of the serial leads reversed as in my previous posting, try an ordinary null modem 9 to 9 pin cable and see if that works with PCRPilot, there is also the possibility that you will need to upgrade to OS 4.1 if you haven't already done that, to be honest, and if I were you, I would stick to what you have got, you must be one of only a few that has succeeded in getting all facilities working with IP1kC including the scanning, I would LEAVE WELL ALONE. In my opinion, the IP1kC program it streets ahead of PCRPilot and is far more versatile with scanning etc, not to be too critical of PCRPilot, it works very well and is very easy to set-up, but lacks some of the refinements necessary to do an Icom PCR-1000 justice.

Well, I checked the Radio Shlock null modem adapter, and it does have RTS/CTS (7/8) and DTR/DSR (4/6) crossed over. Rx/Tx are as well of course. Other than the setup Bob has below, Pin 1, DCD, is also tied to pin 4, DTR. Still not working with a hot synch cable.

Anyone else have luck?

Bob

Hi Bob, the only difference that I can see is the fact that the cable I made up doesn't have pin 1 and 4 tied together, and that configuration works fine for the Palm 3C, I still haven't managed to get the Palm M130 to work with this set-up, which is a bit of a puzzle, but I am still working on that when time allows.
Can you describe exactly what happens with your set-up? at what point does it fail and what error messages do you receive.

3772. TrunkPCR and COM4 - Win XP pro

Yahoo group: PCR1000
Date: 2005-07-04 06:02:16 UTC
From: Torben Mellerup
Topic: 3772 Message: 3772

My PCR1000 are connected at COM4, all other software like HRD, TalkPCR, Pcr1k mini and the original software from Icom runs fine, but when trying TrunkPCR (ver. 0.7.176) and as soon as i chose COM4 the program goes down and Win XP tries sending the "error report", i cannot use COM4.
Anyone any hints ?

I must admit that i havent tried connecting through COM1 or COM2 since it will give me other problems with software/equipment.

Best regards
oz1tmk, Torben

Program opens fine with a tap. Hitting "On" gets a five second
delay, and then a "System Error" window pops up:

SrmSend()
Communication with radio failed..Please check cables and power
commError=773

The On button has become Off, same message if you hit off. The serial
data window in IP1kc looks to show commands being sent, nothing
coming back.

This is with a Palm IIIxe, which has a "for real" RS232 port, AKAIK.
I know my Sony Clie will not work with it's fake serial port. The
Palm works fine with PCRPilot, which is such limited software as to
be a waste of time. I can grab a handheld scanner and do far more.

Dunno about the Pin 1 to 4 business, was rooting through my
electronics junk to find connectors to make up your adapter when it
occurred to me to pin check the RS null modem adapter. Need another
male 232 connector to do a cable, maybe next weekend. Pin 9 is
unused BTW.

Hi all
No suprise that I did not get a reply from this vendor of probably
pirated software.
If it is pirated then the price is exorbitant and a rip off.

Topic: 3772 Message: 3775

I've been using a PCR-100 with an acer running winXP Pro. I am using a Belkin USB-Serial adapter (strangely enough, COM4) Trunk PCR v0.7.176. I have only had a problem when I put my computer into standby and then bring it back up. My Belkin adapter tanks and I must disable/enable it to bring it back online. Other than that I don't have any poblem. My suggestion would be to go into your device manager and check your COM ports. Maybe disabling/enabling COM4 can help. can't hurt!
C.Dust

Torben Mellerup <oz1tmk@...> wrote:
My PCR1000 are connected at COM4, all other software like HRD,
TalkPCR, Pcr1k mini and the original software from Icom runs fine, but
when trying TrunkPCR (ver. 0.7.176) and as soon as i chose COM4 the
program goes down and Win XP tries sending the "error report", i
cannot use COM4.
Anyone any hints ?

I must admit that i havent tried connecting through COM1 or COM2 since
it will give me other problems with software/equipment.

Best regards
oz1tmk, Torben

Hi David

I bought a USB to serial adapter on ebay -- it was a few bucks.

My latest notebook also has no serial ports. This adapter is a no-name, but it's more than just a connector adapter. Consists of a cable with a USB plug on one end and an expanded serial 9-pin on the other with status LED's in it. It comes with a mini-CD with the drivers.

The cable might be long enough - 3 feet -- to connect directly to the PCR-1000, however, it has the nuts staked into it, so won't clear. It's intended to attach another 9-pin plug into it and secure with the thumbscrews. So, I mated it up to the original serial cable and that worked. I assigned it to COM1. It might default to COM 5 or 6, and I don't think that worked.

If you search on "USB to serial" on ebay you'll find lots of them. Should also be available at local stores.

Barry

Topic: 3776 Message: 3778

Hi David,

I'm presently using the Radio Shack USB/RS232 converter -- it works fine.
I've also used the Buxcomm http://www.buxcomm.com/Special_Connectors.htm
USB/RS232 interface with good results -- and these are cheaper. The only
problem that I've had with either of these is you must set them up for a com
port lower then 8. The Icom software won't recognize com ports 8 and above.
The Win XP device manager does allow you to force the com port number but
the procedure is a little convoluted.

Let me know if I can help any further.

From: Bill Smith
Topic: 3776 Message: 3780

David,
I have been using a Belkin F5U109 for about 3-4 years
with XP using both Talk PCR and HRD.

You should be able to get one quite easily. It says it
is a PDA adaptor, but in realality it is a 9 pin at
one end and a USB at the other - it connects to
TalkPCR using COM Port6

Hope this helps

Regards

Hi

That didn't do the trick, however i seems to have another problem, testing
all 4 com ports, its the same result so i probably
have a conflict with another application wich leaves a running/loaded DLL or
something in that direction, anyway ahead for me
investigating and thanks alot for answering :-)

Hey Guys, those of you that have this working, please check your connection settings. PCRPilot does not seem to care, it always works. Occurred to me that IP1kc may need to have the connection stuff set manually. Settings are speed and flow control. Please check, this might be it if the program does not set it on initialization.

Jos? control? la tensi?n de fuente. Tiene que estar cercana a 13.2V.
Si la tensi?n no es suficiente, no reconoce los estados en la RS232 (puerto serie).
Con el uso luego de un tiempo la tensi?n de fuente suele variar.
Cuando midas la tensi?n hacelo con el PCR 1000 conectado y encendido; si no lo hac?s as? la tensi?n de fuente ser? superior a la tensi?n de funcionamiento.
Tambi?n control? la continuidad de los cables con un tester o desarm? los conectores del cable para revisar si hay alguno desoldado.

Hi all, I use a small utility called LDSerlib, it allows you to set the communication parameters for your com port, this may be the answer for some Palms, but the settings make no difference to the Palm 3C, I can set any speed (within reason) and any handshake and it makes no difference to my machine.
My settings, just for the record are: speed 57k6, bits 8, parity none, Xon/Xoff unticked, Rts/Cts unticked.
I'm still trying to get a palm M130 to work!!!
Rgds Bob.
BTW Does anyone know if the serial port can be configured without using a third party utility.

Hi guys -

This is not really a PCR-1000 question, but I am going to use my PCR-1000 with it until I pass my Element 3 test (hopefully). Recently got a Hustler 5-band vertical to put on my roof as I have a small back yard. It's supposed to be guyed - I was wondering what kind of material makes the best nonconducting guys, i.e lasts more than 1 year. Thanks for any suggestions.

Hi Doug,

I recommend Kevlar with a jacket of Dacron-Polyester (to protect the Kevlar from UV). Radio Works has two sizes: http://www.radioworks.com/PDFCat05/70-71.pdf

I've had this stuff up supporting a satellite antenna boom for more then 10 years with only having to replace one of the two supports, and UV is terrible here in Colorado.

Doug:
Dacron is the best bet for environmental resistance (UV, ozone, salt, acids, alkaiis, etc). Kevlar is better, but expensive. Stay away from nylon and poly rope - nylon stretches too much and poly rots quickly.
Take a look at Radio Works Web site.
Just my 2 cents...

Hi Doug,

I recommend Kevlar with a jacket of Dacron-Polyester (to protect the Kevlar from UV). Radio Works has two sizes: http://www.radioworks.com/PDFCat05/70-71.pdf

I've had this stuff up supporting a satellite antenna boom for more then 10 years with only having to replace one of the two supports, and UV is terrible here in Colorado.

Hi guys -

This is not really a PCR-1000 question, but I am going to use my PCR-1000 with it until I pass my Element 3 test (hopefully). Recently got a Hustler 5-band vertical to put on my roof as I have a small back yard. It's supposed to be guyed - I was wondering what kind of material makes the best nonconducting guys, i.e lasts more than 1 year. Thanks for any suggestions.

Doug

Kevlar Guy rope, should be available from antenna suppliers and will last for years,

Cheers

Hi All

How about nylon cable with suntan lotion?? Just a JOKE..

I love my PCR-1000...

Question!!: Does the DSP unit really make a huge differance??

Gary

3801. PCR-1000 Operation Question

Yahoo group: PCR1000
Date: 2005-07-10 03:32:04 UTC
From: Mike / Nancy
Topic: 3801 Message: 3801

I have looked everywhere that I can think of, but cannot find an answer to this question.

On the PCR-1000, is it possible to scan through multiple mempry banks at the same time, or am I limited to one bank at a time?

Thank You In Advacne!

Mike

Mike:

It depends on the software you use.

Nope - the Icom software SUX! DL the
TalkPCR from the files section on this group.
You will be much happier!

3806. Re: [PCR1000] Antenna guys

Yahoo group: PCR1000
Date: 2005-07-10 07:23:32 UTC
From: Stefan Caspersz
Topic: 3792 Message: 3806

Hi Gary,

The DSP unit does make a difference when the signal strength is low or you experience a lot of noise. If listening to SSB or narrow band AM voice communications like Air Traffic Control or Amateur Radio, having the DSP unit switched on alone makes listening a lot easier on the ears, even on a strong signal.

cheers,
Stefan

Hi Stefan.

Ok I have placed a order for my DSP today, hopefully get it tomorrow and will install.

I have a ICOM 706MKiiG which has the unit built in allready, but it dont really make that much differrance. I find the DSP software used for sound cards works well, but I shall install on the PCR1000 and see if it makes a differance.

thks
Gary

3810. ICOM PCR 1000 + TalkPCR

Yahoo group: PCR1000
Date: 2005-07-13 20:18:54 UTC
From: astro562003
Topic: 3810 Message: 3810

Hi,Guys
I wonder if anybody can help me solve my problem with my PCR 1000? The radio was connected to three computers via a switchbox and worked just fine in every way. With the holyday at hand, I disconnected the PCR and one of the computers (laptop) from the switchbox and tried to connect the laptop direct to the PCR with proper cables and adapter (DB9 to USB). The result was that the computer didn't recognize the radio. Well, I thought I might have done some mistake during the disconnection, but when I got home to connect the other two computers to the radio, they showed exactly the same picture at screen (TalkPCR failed to recieve a response from your radio). Neither it did help to change comports! As I understand it can't be the eeprom, thou the radio even doesn't start up. May be the radio itself has crashed, but how and what? The radio was transported in a shockproof suitcase. Anybody out there who can tip me off to solve the problem.

My best regards

Robert
